It focuses on ensuring that services are designed in a way that they can be effectively delivered and supported by the organization and its partners.</li></ul>

## ITIL-4-Practitioner-Release-Management Pdf Version - ITIL-4-Practitioner-Release-Management Latest Exam Tips

With the Peoplecert ITIL-4-Practitioner-Release-Management certification exam you can do your job nicely and quickly. You should keep in mind that the Peoplecert ITIL-4-Practitioner-Release-Management certification exam is a valuable credential and will play an important role in your career advancement. With the right Peoplecert ITIL-4-Practitioner-Release-Management Exam Preparation, commitment and dedication you can make this challenge easy and quick.

### Peoplecert ITIL 4 Practitioner: Release Management Exam Sample Questions (Q15-Q20):

#### NEW QUESTION # 15

A release manager has noticed that the organization has many standardized services provided to international organizations. Which aspect of release management will this situation directly affect?

- A. The release models
- B. The release plans
- C. Continuous integration
- D. Continuous delivery

#### Answer: A

Explanation:

Standardized services provided to international organizations imply a need for consistency and scalability in how releases are managed across diverse contexts. The ITIL 4 Practitioner: Release Management document explains that release models are used to standardize the approach to releases: "Release models define the structure, contents, and schedule of releases... They ensure consistent and repeatable processes, which is particularly important for organizations with standardized services" (Section 3.2.2).

- \* Option A (The release plans) refers to specific plans for individual releases, which may be affected indirectly but are not the primary aspect impacted by standardization needs.
- \* Option B (Continuous integration) and Option C (Continuous delivery) are development practices that may interact with release management but are not directly affected by the need for standardization across international services.
- \* Option D (The release models) is directly affected, as standardized services require well-defined release models to ensure consistency, repeatability, and scalability across international contexts.

The situation directly impacts the design and application of release models to accommodate standardized services globally. Thus, the correct answer is D.

#### NEW QUESTION # 16

Which activity of the 'release model development and improvement' process is used to standardize the preparation of release instances?

- A. Product architecture and service relationship analysis
- B. Release management approach review and development
- C. Release model review and development
- D. Release execution

#### Answer: C

Explanation:

The release model development and improvement process aims to create and refine standardized models for releases. The ITIL 4 Practitioner: Release Management document explains: "Release model review and development involves defining and standardizing the structure, contents, and schedule of releases to ensure consistency in the preparation of release instances" (Section 3.2.2).

- \* Option A (Release management approach review and development) focuses on the overall practice approach, not specifically the preparation of release instances.
- \* Option B (Release model review and development) directly addresses standardizing the preparation of release instances by defining repeatable models.
- \* Option C (Product architecture and service relationship analysis) is a supporting activity to understand dependencies, not to standardize release preparation.
- \* Option D (Release execution) is the process of deploying a release, not developing or standardizing models.

The correct answer is B, as it directly relates to standardizing release preparation through model development.

### NEW QUESTION # 17

An organization manually checks that releases of new or changed products/services have been successfully completed. Which tools should be used to automate this process?

- A. Workflow management and collaboration tools
- B. Analysis and reporting tools
- **C. Monitoring and event management tools**
- D. Enterprise architecture tools

#### Answer: C

Explanation:

Automating the verification of release success involves tracking the performance and stability of the released services. The ITIL 4 Practitioner: Release Management document notes: "Monitoring and event management tools can automate the verification of release success by tracking system performance and detecting anomalies post-release, ensuring the release meets its objectives" (Section 4.2).

- \* Option A (Monitoring and event management tools) is correct, as these tools can automatically check system health and performance after a release, replacing manual checks.
- \* Option B (Workflow management and collaboration tools) focuses on process coordination, not post-release verification.
- \* Option C (Enterprise architecture tools) is used for dependency mapping, not release verification.
- \* Option D (Analysis and reporting tools) provides retrospective insights but doesn't automate real-time verification.

The correct answer is A, as monitoring tools are best suited for automating release verification.

### NEW QUESTION # 18

What is MOST LIKELY to affect how significantly an organization's release management activities are dependent on partners and suppliers?

- **A. The source of the organization's products and technology solutions**
- B. The maturity of the release management practice
- C. The amount of automation in the release management practice
- D. The knowledge level of the organization's users

#### Answer: A

Explanation:

The dependency on partners and suppliers in release management is influenced by the extent to which an organization relies on external products or services. The ITIL 4 Practitioner: Release Management document explains: "The source of the organization's products and technology solutions significantly affects the dependency on partners and suppliers, as reliance on external software, hardware, or services increases the need for coordination during releases" (Section 3.4).

- \* Option A (The knowledge level of users) impacts user adoption but not the dependency on suppliers for release activities.
- \* Option B (The maturity of the practice) affects internal efficiency, not the structural dependency on external parties.
- \* Option C (The amount of automation) influences how releases are executed but doesn't determine the dependency on suppliers.
- \* Option D (The source of products and technology solutions) directly determines how much the organization relies on external parties, affecting release management dependency.

The correct answer is D, as the source of technology solutions most significantly impacts supplier dependency.

### NEW QUESTION # 19

A new release manager wants to explain to the organization's service consumers the purpose of a new release management practice. What should the release manager say to the service consumers to help them realize the value of release management?

- **A. The release management practice will ensure the quick use of improved services after new service features have been made available.**
- B. The release management practice will ensure that new service features are available to users to mitigate the service provider's risks.
- C. The release management practice will ensure that new service features are available to the service operations team to reduce business losses.
- D. The release management practice will ensure that new service features are available to the service operations team to

enable them to perform tests.

**Answer: A**

## NEW QUESTION # 20

If you have a strong desire to get the Peoplecert certificate, our ITIL-4-Practitioner-Release-Management study materials are the best choice for you. At present, the certificate has gained wide popularity. So the official test syllabus of the ITIL-4-Practitioner-Release-Management exam begins to become complicated. So you must accept professional guidance. After all, lots of people are striving to compete with many candidates. Powerful competitiveness is crucial to pass the ITIL-4-Practitioner-Release-Management Exam. Our company has mastered the core technology of the ITIL-4-Practitioner-Release-Management study materials. What's more, your main purpose is to get the certificate quickly and easily. Our goal is to aid your preparation of the ITIL-4-Practitioner-Release-Management exam. Our study materials are an indispensable helper for you anyway. Please pay close attention to our ITIL-4-Practitioner-Release-Management study materials.
