[https://drive.google.com/open?id=1ydhaB2\\_6nr7QhE5YAA-vN77bWfWX5n80](https://drive.google.com/open?id=1ydhaB2_6nr7QhE5YAA-vN77bWfWX5n80)

With these adjustable SAP Certified Associate - Back-End Developer - ABAP Cloud (C-ABAPD-2507) mock exams, you can focus on weaker concepts that need improvement. This approach identifies your mistakes so you can remove them to master the C-ABAPD-2507 exam questions of TestKingIT give you a comprehensive understanding of C-ABAPD-2507 Real Exam format. Self-evaluation by taking practice exams makes your SAP C-ABAPD-2507 exam preparation flawless and strengthens enough to crack the test in one go.

Our company according to the situation reform on conception, question types, designers training and so on. Our latest C-ABAPD-2507 exam torrent was designed by many experts and professors. You will have the chance to learn about the demo for if you decide to use our C-ABAPD-2507 quiz prep. We can sure that it is very significant for you to be aware of the different text types and how best to approach them by demo. At the same time, our C-ABAPD-2507 Quiz torrent has summarized some features and rules of the cloze test to help customers successfully pass their C-ABAPD-2507 exams.

## Visual SAP C-ABAPD-2507 Cert Test, Valid C-ABAPD-2507 Exam Fee

We are never complacent about our achievements, so all content of our C-ABAPD-2507 exam questions are strictly researched by proficient experts who absolutely in compliance with syllabus of this exam. Accompanied by tremendous and popular compliments around the world, to make your feel more comprehensible about the C-ABAPD-2507 study prep, all necessary questions of knowledge concerned with the exam are included into our C-ABAPD-2507 simulating exam.

## SAP Certified Associate - Back-End Developer - ABAP Cloud Sample Questions (Q59-Q64):

### NEW QUESTION # 59

Which of the following ABAP SQL statements are valid? Note: There are 2 correct answers to this question.

- A. SELECT FROM /dmo/connection FIELDS r-i carrid, airpfrom u GROUP BY carrid, connid INTO TABLE @DATA(It\_hits).
- B. SELECT FROM /dmo/connection FIELDS V D MAX(distance) AS dist\_max MIN(distance) AS dist\_min INTO TABLE @DATA(It\_hits).
- C. SELECT FROM /dmo/connection FIELDS V O carrid, airpfrom, MAX( distance) AS dist\_max, MIN(distance) AS dist\_min INTO TABLE @DATA(It\_hits)
- D. SELECT FROM /dmo/connection FIELDS carrid O airpfrom, MAX(distance) AS dist\_max, MIN( distance) AS dist\_min GROUP BY carrid, airpfrom INTO TABLE @DATA(It\_hits)

Answer: C,D

Explanation:

The following are the explanations for each ABAP SQL statement:

A: This statement is valid. It selects the fields carrid, airpfrom, and the aggregate functions MAX(distance) and MIN(distance) from the table /dmo/connection, and groups the results by carrid and airpfrom. The aggregate functions are aliased as dist\_max and dist\_min. The results are stored in an internal table named It\_hits, which is created using the inline declaration operator @DATA.

B: This statement is valid. It is similar to statement A, except that it does not specify the GROUP BY clause. This means that the aggregate functions are applied to the entire table, and the results are stored in an internal table named It\_hits, which is created using the inline declaration operator @DATA.

C: This statement is invalid. It selects the aggregate functions MAX(distance) and MIN(distance) from the table /dmo/connection, but it does not specify any grouping or non-aggregate fields. This is not allowed in ABAP SQL, as the SELECT list must contain at least one non-aggregate field or a GROUP BY clause. The statement will cause a syntax error.

D: This statement is invalid. It selects the fields carrid and airpfrom from the table /dmo/connection, and groups the results by carrid and connid. However, the field connid is not included in the SELECT list, which is not allowed in ABAP SQL, as the GROUP BY clause must contain only fields that are also in the SELECT list. The statement will cause a syntax error.

### NEW QUESTION # 60

What is a class defined as part of an ABAP program called?

- A. Local variable
- **B. Local class**
- C. Global class
- D. Global variable

**Answer: B**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

\* In ABAP Cloud/RAP examples, test classes are created inside the development object (e.g., inside the behavior implementation) and are marked FOR TESTING-these are local classes (they live in the program/class include, not as separate global repository classes). The guides show creating test classes under the Test Classes tab and referencing the Local Types section of the implementation (friends etc.), i.e., local to the program/object.

\* This contrasts with global classes that exist as standalone repository objects; the RAP test patterns explicitly model the former (local) for unit tests within the object's context.

### NEW QUESTION # 61

When you create an exception class, what does SAP recommend you do? Note: There are 3 correct answers to this question.

- **A. Define corresponding public attributes, if you want to pass context-specific values to placeholders of a message.**
- **B. Implement interface if\_t100\_message, if you want to reuse messages from a message class.**
- C. Inherit from cx\_static\_check, if you want a warning at design time that the exception can never be raised.
- **D. Inherit from cx\_static\_check, if you want a warning at design time that the exception will not be caught.**
- E. Inherit from cx\_no\_check, if you want to reuse messages from a system exception class.

**Answer: A,B,D**

### NEW QUESTION # 62

Which of the following is a generic internal table type?

- **A. INDEX TABLE**
- B. STANDARD TABLE
- C. HASHED TABLE
- D. SORTED TABLE

**Answer: A**

Explanation:

A generic internal table type is a table type that does not define all the attributes of an internal table in the ABAP Dictionary; it leaves some of these attributes undefined. A table type is generic in the following cases1:

You have selected Index Table or Not Specified as the access type.

You have not specified a table key or specified an incomplete table key.

You have specified a generic secondary table key.

A generic table type can be used only for typing formal parameters or field symbols. A generic table type cannot be used for defining data objects or constants<sup>2</sup>.

Therefore, the correct answer is B. INDEX TABLE, which is a generic table type that does not specify the access type or the table key. The other options are not generic table types, because:

A . SORTED TABLE is a table type that specifies the access type as sorted and the table key as a unique or non-unique primary key<sup>3</sup>.

C . STANDARD TABLE is a table type that specifies the access type as standard and the table key as a non-unique standard key that consists of all the fields of the table row in the order in which they are defined<sup>4</sup>.

D . HASHED TABLE is a table type that specifies the access type as hashed and the table key as a unique primary key<sup>5</sup>.

### NEW QUESTION # 63

Which of the following are valid sort operations for internal tables? Note: There are 3 correct answers to this question.

- A. Sort a standard table using  
SORT itab ASCENDING.  
Sort a sorted table using
- B. SORT itab BY field1 ASCENDING field2 DESCENDING.  
Sort a standard table using
- C. SORT itab BY field1 field2.  
Sort a standard table using
- D. SORT itab.  
Sort a sorted table using
- E. SORT itab DESCENDING.

**Answer: A,C,D**

### NEW QUESTION # 64

.....

It is acknowledged that there are numerous C-ABAPD-2507 learning questions for candidates for the C-ABAPD-2507 exam, however, it is impossible for you to summarize all of the key points in so many materials by yourself. But since you have clicked into this website for C-ABAPD-2507 practice materials you need not to worry about that at all because our company is especially here for you to solve this problem. We have a lot of regular customers for a long-term cooperation now since they have understood how useful and effective our C-ABAPD-2507 Actual Exam is.
