## **Pass Guaranteed Quiz Juniper JN0-460 - Mist AI Wired, Specialist (JNCIS-MistAI-Wired) Exam Learning**

As we know, there are nothing best, only something better for we are keeping developing and face competition all the time. That is why our JN0-460 study guide is regularly updated by our experts for keeping it always compatible to the needs and requirements of our worthy customers all over the world. The result is that you will always find our JN0-460 Exam Braindumps are the latest and valid. Come to buy our JN0-460 learning quiz, you will pass your exam easily!

## **Juniper Mist AI Wired, Specialist (JNCIS-MistAI-Wired) Sample Questions (Q45-Q50):**

### **NEW QUESTION # 45**

Which action would site-level network administrators be able to perform?

- A. assign access points to the site
- B. create a config template

- C. modify an RF template
- D. reboot an access point

**Answer: D**

Explanation:

In Juniper Mist role-based access control (RBAC), site-level administrators have limited privileges to manage devices within their assigned sites.

They cannot modify organization-level templates or global settings but can perform operational tasks, including rebooting APs or switches and monitoring their status.

This ensures proper delegation of duties while maintaining centralized configuration control.

#### NEW QUESTION # 46

You receive a Marvis Action that reports "Port negotiation mismatch detected on EX3400-48P." In this scenario, which two steps should you take to resolve the issue? (Choose two.)

- A. Verify that both switch ports are set to auto-negotiate speed and duplex.
- B. Replace the switch uplink SFP module.
- C. Force the connected device port to half-duplex mode.
- D. Check that the connected device supports 802.3 autonegotiation.

**Answer: A,D**

Explanation:

A port negotiation mismatch occurs when the local and remote interfaces fail to agree on common speed or duplex settings.

Marvis Wired Assurance automatically detects this by analyzing telemetry from the switch's physical interfaces.

You can resolve this by ensuring auto-negotiation is enabled on both ends (A) and verifying the peer device supports the 802.3 autonegotiation standard (D).

Manually forcing half-duplex or replacing hardware is unnecessary unless the hardware is faulty.

"Marvis Wired Actions correlate interface negotiation errors with LLDP neighbor data to pinpoint mismatched configurations, helping administrators quickly verify speed/duplex compatibility and 802.3 autonegotiation support." References:

#### NEW QUESTION # 47

You are using the Wired Visibility option as your Wired Assurance solution. In this scenario, which protocol is used to exchange basic device information between your switches and APs?

- A. LLDP
- B. LACP
- C. Telemetry
- D. SNMP

**Answer: A**

#### NEW QUESTION # 48

When adopting your switches into the Juniper Mist Cloud, you notice that the status of the switches is

"Unassigned."

In this scenario, which additional step is required for the switches to show as "Connected" in the Juniper Mist dashboard?

- A. Use the Mist AI mobile application and rescan the QR code for adoption to your Mist site.
- B. Troubleshoot the system configuration with the [show system connections | grep 2200] and [show configuration system services outbound-ssh] commands.
- C. Select each switch and assign them to your selected site.
- D. You must restart each switch before Mist recognizes it on your dashboard.

**Answer: C**

Explanation:

When a switch is successfully onboarded into Mist Cloud but shows "Unassigned," it means the device has been claimed into the organization but has not yet been assigned to a specific site.

"After claiming switches into an organization, you must assign each switch to a site for it to transition from Unassigned to Connected state and begin receiving configuration and telemetry updates." Option A: Incorrect - rescanning is not needed once the device is claimed.

Option B: Incorrect - reboots are unnecessary for assignment recognition.

Option C: Incorrect - these commands are for connectivity troubleshooting, not site assignment.

Option D: Correct - assigning each switch to its intended site enables full Mist management and connectivity state.

## NEW QUESTION # 49

How does VXLAN improve Layer 2 tunneling compared to traditional VLANs?

- A. By reducing the maximum frame size
- B. By enforcing stricter security policies
- C. By decreasing tunneling overhead
- D. By offering a larger namespace for segment IDs

Answer: D

## NEW QUESTION # 50

.....

Our JN0-460 learning guide is very efficient tool in the world. As is known to us, in our modern world, everyone is looking for to do things faster, better, smarter, so it is no wonder that productivity hacks are incredibly popular. So we must be aware of the importance of the study tool. In order to promote the learning efficiency of our customers, our JN0-460 Training Materials were designed by a lot of experts from our company. Our JN0-460 study materials will be very useful for all people to improve their learning efficiency.
