NEW QUESTION # 801

What principle must always be included with an SOC 2 report?

- A. Processing integrity
- B. Privacy

- C. Confidentiality
- D. Security

Answer: D

NEW QUESTION # 802

Cloud systems are increasingly used for BCDR solutions for organizations.

What aspect of cloud computing makes their use for BCDR the most attractive?

- A. On-demand self-service
- **B. Measured service**
- C. Broad network access
- D. Portability

Answer: B

Explanation:

Business continuity and disaster recovery (BCDR) solutions largely sit idle until they are actually needed.

This traditionally has led to increased costs for an organization because physical hardware must be purchased and operational but is not used. By using a cloud system, an organization will only pay for systems when they are being used and only for the duration of use, thus eliminating the need for extra hardware and costs. Portability is the ability to easily move services among different cloud providers.

Broad network access allows access to users and staff from anywhere and from different clients, and although this would be important for a BCDR situation, it is not the best answer in this case.

On-demand self-service allows users to provision services automatically and when needed, and although this too would be important for BCDR situations, it is not the best answer because it does not address costs or the biggest benefits to an organization.
