Lpi Linux Essentials Certificate Exam - version 1.6 Sample Questions (Q72-Q77):

NEW QUESTION # 72
When typing a long command line at the shell, what single character can be used to split a command across multiple lines?

Answer:

Explanation:
Explanation
The backslash character () is used to escape the meaning of the next character in a command line. This means that the next character is treated as a literal character, not as a special character. For example, if you want to use a space in a file name, you can use a backslash before the space to prevent the shell from interpreting it as a separator. Similarly, if you want to split a long command line across multiple lines, you can use a backslash at the end of each line to tell the shell that the command is not finished yet. The shell will ignore the newline character and continue reading the next line as part of the same command.
For example, you can write:
ls -l/home/user/Documents
instead of:
ls -l /home/user/Documents
Both commands will produce the same output, but the first one is easier to read and type. References:

NEW QUESTION # 73
What is the return value of a shell script after successful execution?

- A. 0
- B. 1
- C. 2
- D. 3
- E. 4

Answer: D

Explanation:
The return value of a shell script after successful execution is 0. This is a convention followed by most UNIX and Linux commands, programs, and utilities. A return value of 0 indicates that the command or script completed successfully, without any errors. A return value of non-zero (1-255) indicates that the command or script failed, and the value can be interpreted as an error code. The return value of a command or script is stored in the special variable $? and can be used to test the outcome of a command or script123.
For example, the following script will print a message based on the return value of the ls command:
#!/bin/bash ls if [$? -eq 0]; then echo "ls command executed successfully" else echo "ls command failed" fi

NEW QUESTION # 74
Which files are the source of the information in the following output? (Choose two.) uid=1000 (bob) gid=1000 (bob) groups=1000 (bob), 10 (wheel), 150 (docker), 1001 (libvirt) (wireshark), 989

- A. /var/db/users
- B. /etc/id
- C. /etc/group
- D. /etc/passwd
- E. /home/index

Answer: C,D

NEW QUESTION # 75
Which of the following programs are web servers? (Choose two.)

- A. Dovecot
- B. NGINX
- C. Curl
- D. Apache HTTPD
- E. Postfix

Answer: B,D

NEW QUESTION # 76

Which of the following Linux Distributions is derived from Red Hat Enterprise Linux?

- A. openSUSE
- B. Ubuntu
- C. Raspbian
- D. Debian
- E. CentOS

Answer: E

Explanation:

CentOS is a Linux distribution that is derived from Red Hat Enterprise Linux (RHEL). CentOS stands for Community Enterprise Operating System and it aims to provide a free, enterprise-class, community-supported computing platform that is functionally compatible with RHEL. CentOS is one of the most popular Linux distributions for servers and cloud computing. Raspbian, openSUSE, Debian and Ubuntu are other Linux distributions that are not derived from RHEL, but have their own origins and development histories. Raspbian is based on Debian and optimized for the Raspberry Pi. openSUSE is a community project sponsored by SUSE Linux and other companies. Debian is one of the oldest and most influential Linux distributions, and Ubuntu is derived from Debian and sponsored by Canonical Ltd. Reference:
