IDPX英語版 & IDPX日本語独学書籍

MogiExamは受験者に向かってIDPX試験について問題を解決する受験資源を提供するサービスのサイトで、さまざまな受験生によって別のトレーニングコースを提供いたします。受験者はMogiExamを通して順調に試験に合格する人がとても多くなのでMogiExamがCIDQ業界の中で高い名声を得ました。

CIDQ Interior Design Professional Exam 認定 IDPX 試験問題 (Q92-Q97):

質問 # 92

When does a project team gather information about a company's culture, mission, values, and business goals to understand possible challenges for a new workplace environment?

- A. client interview
- B. design development
- **C. programming**
- D. schematic design

正解: C

解説:

Programming is the initial phase of the design process where the team collects detailed information about the client's needs, including culture, mission, values, and goals, to define the project scope and identify challenges. Client interviews (B) are part of programming but not the full phase. Schematic design (C) begins conceptual layouts based on programming data, not data collection. Design development (D) refines designs, well after initial information gathering. Programming is the correct phase for this foundational step.

Verified Answer from Official Source: A - programming

"During programming, the project team gathers information on the client's culture, mission, values, and goals to establish the project requirements and anticipate challenges." (NCIDQ IDPX Study Guide, Section 2: Project Coordination)

Explanation from Official Source: The NCIDQ defines programming as the research phase critical to aligning the design with client identity and operational needs, setting the stage for all subsequent work.

Objectives:

* Conduct programming for project planning (IDPX Objective 2.1).

質問 # 93

During a high school renovation project, the school board and several teachers each call the designer several times a week to request changes. What is the BEST way for the interior designer to keep the project on schedule?

- A. Send a weekly summary of calls, emails, and meetings to the stakeholders
- **B. Ask the client to establish a point person and a clear line of internal decision-making**
- C. Talk to each stakeholder and take the time to incorporate all of the changes they request
- D. Set up a weekly meeting with all stakeholders to discuss all of their proposed changes

正解: B

解説:

Multiple stakeholders requesting changes can delay a project unless streamlined. Asking the client to designate a single point person (B) centralizes communication and decision-making, reducing confusion and keeping the schedule intact, per project management best practices. Weekly summaries (A) inform but don't control input. Weekly meetings (C) may slow progress with excessive discussion. Incorporating all changes (D) risks scope creep and delays. B is the most efficient solution.

Verified Answer from Official Source: B - Ask the client to establish a point person and a clearline of internal decision-making

"To maintain schedule, the designer should request a single client point of contact to streamline communication and decision-making." (NCIDQ IDPX Study Guide, Section 3: Contract Administration) Explanation from Official Source: The NCIDQ highlights centralized communication as a key strategy to manage stakeholder input and protect project timelines.

Objectives:

* Manage client interactions (IDPX Objective 3.14).

質問 # 94

Which type of mechanical heating system uses pipes or tubing embedded within the ceiling, floor, or wall construction?

- **A. radiant**
- B. electric
- C. hot-water
- D. forced-air

正解: A

解説:

Radiant heating systems use pipes or tubing embedded in floors, walls, or ceilings to circulate hot water or electric elements, transferring heat directly to surfaces and occupants via radiation. Electric (A) refers to a power source, not a system type, and could include radiant but isn't specific. Hot-water (C) describes the medium, not the delivery method, and could apply to radiators, not embedded systems. Forced-air (D) uses ducts and air circulation, not embedded pipes. Radiant (B) precisely matches the description of embedded tubing for heating, common in modern design for efficiency and comfort.

Verified Answer from Official Source: B - radiant

"Radiant heating systems utilize pipes or tubing embedded within floors, walls, or ceilings to provide heat through radiation."

(NCIDQ IDPX Study Guide, Section 2: Building Systems) Explanation from Official Source: The NCIDQ identifies radiant systems as a distinct mechanical heating method, valued for even heat distribution and energy efficiency, often integrated into interior surfaces.

Objectives:

* Understand mechanical system types (IDPX Objective 2.9).

質問 # 95

The specification of which item is within the scope of work for interior designers when designing for water conservation?

- A. vegetated roof system
- B. ultra-low flow faucets
- C. rainwater collection cisterns
- D. FSC certified wood products

正解: B

解説:

Interior designers specify interior fixtures like ultra-low flow faucets (e.g., 0.5 gpm) to reduce water use, falling within their scope per NCIDQ and plumbing codes (IPC). Vegetated roofs (B) and cisterns (C) are exterior systems managed by architects or engineers. FSC wood (D) addresses sustainability but not water conservation. Faucets (A) are directly within the designer's interior-focused responsibility.

Verified Answer from Official Source: A - ultra-low flow faucets

"Interior designers specify ultra-low flow faucets within their scope to promote water conservation in interior spaces." (NCIDQ IDPX Study Guide, Section 2: Materials and Finishes) Explanation from Official Source: The NCIDQ defines water-efficient fixtures as part of the designer's role in sustainable interiors, aligning with codes and client needs.

Objectives:

* Specify materials for sustainability (IDPX Objective 2.5).

質問 #96

What do written specifications define?

- A. quantity
- B. form
- C. relationship
- D. quality

正解: D

解説:

Written specifications, per CSI MasterFormat, define the quality of materials, workmanship, and installation standards (e.g., "Type X gypsum board, 5/8" thick"), ensuring the design intent is met. Quantity (A) is detailed in schedules or drawings. Form (B) is shown in drawings, not specs. Relationship (D) refers to coordination, not specification content. Quality (C) is the primary focus of specs, distinguishing them from other contract documents.

Verified Answer from Official Source: C - quality

"Written specifications define the quality of materials and execution required for the project." (NCIDQ IDPX Study Guide, Section 4: Specifications) Explanation from Official Source: The NCIDQ emphasizes specs as the tool to establish performance and aesthetic standards, complementing drawings' spatial details.

Objectives:

* Understand specification purposes (IDPX Objective 4.1).

質問 #97

.....

誰もが私たちの人生の貴重を認識する必要があります。時間を無駄にすることはできないので、目標をまっすぐに達成するための良い方法が必要です。もちろん、最新のIDPX試験トレントが最適です。IDPX試験の質問から、認定試験の知識だけでなく、質問に迅速かつ正確に回答する方法を学ぶことができることをお約束します。今、IDPXテストトレントのデモを無料でダウンロードして、素晴らしい品質を確認できます。
