HP Aruba Certified Network Security Professional - HPE7-A02 Free Exam Questions

QUESTION NO: 1
A company uses HPE Aruba Networking ClearPass Policy Manager (CPPM) as a TACACS+ server to authenticate managers on its AOS-CX switches. You want to assign managers to groups on the AOS-CX switch by name. How do you configure this setting in a CPPM TACACS+ enforcement profile?

- A. Add the Shell service and set sudocmd to the group name.
- B. Add the Shell service and set priv-lev to the group name.
- C. Add the Aruba Common service and set Aruba-Admin-Role to the group name.
- D. Add the Aruba Common service and set Aruba-Priv-Admin-User to the group name.

Hide answer/explanation Discussion

Correct Answer: C

To assign managers to groups on the AOS-CX switch by name using HPE Aruba Networking ClearPass Policy Manager (CPPM) as a TACACS+ server, you should add the Aruba service to the TACACS+ enforcement profile and set the Aruba-Admin-Role to the group name. This configuration ensures that the appropriate administrative roles are assigned to managers based on their group membership, allowing for role-based access control on the AOS-CX switches.

QUESTION NO: 2
You are using OpenSSL to obtain a certificate signed by a Certification Authority (CA). You have entered this command:
openssl req -new -out file1.pem -keyout rsa.3072 -days 365 -nodes file2.pem
Enter PEM pass phrase:
Verify - Enter PEM pass phrase:
Country Name (2 letter code) [AU]: US
State or Province Name (full name) [Some-State]: California
Locality Name (eg, city) []: Sunnyvale
Organization Name (eg, company) [Internet Widgits Pty Ltd]: example.com
Organizational Unit Name (eg, section) []: Infrastructure
Common Name (e.g. server FQDN or YOUR name) []: radius.example.com
What is one guideline for continuing to obtain a certificate?

- A. You should use a third-party tool to encrypt file2.pem before sending it and file1.pem to the CA.
- B. You should concatenate file1.pem and file2.pem into a single file, and submit that to the desired CA to sign.
- C. You should submit file1.pem, but not file2.pem, to the desired CA to sign.
- D. You should submit file2.pem, but not file1.pem, to the desired CA to sign.

Hide answer/explanation Discussion

Correct Answer: C

When using OpenSSL to obtain a certificate signed by a Certification Authority (CA), you should submit the Certificate Signing Request (CSR) file, which is file1.pem, to the CA. The CSR contains the information about the entity requesting the certificate and the public key, but not the private key, which is in file2.pem. The CA uses the information in the CSR to create and sign the certificate. The CSR (file1.pem) includes the public key and the entity information required by the CA to issue a certificate.

便利なHPE7-A02最新対策問題試験-試験の準備方法-権威のあるHPE7-A02試験勉強書

HPE7-A02学習クイズの最も注目すべき機能は、簡単かつ簡単に試験のポイントを学習し、認定コースの概要のコア情報を習得するのに役立つ最も実用的なソリューションを提供することです。それらの品質は、他の資料の品質よりもはるかに高く、HPE7-A02トレーニング資料の質問と回答には、利用可能な最高のソースからの情報が含まれています。初心者でも経験豊富な試験受験者でも、HPE7-A02スタディガイドは大きなプレッシャー

を軽減し、困難を効率的に克服するのに役立ちます。

HP Aruba Certified Network Security Professional Exam 認定 HPE7-A02 試験問題 (Q46-Q51):

質問 # 46

A company is using HPE Aruba Networking ClearPass Device Insight (CPDI) (the standalone application). In the CPDI security settings, Security Analysis is On, the Data Source is ClearPass Devices Insight, and Enable Posture Assessment is On. You see that device has a Risk Score of 90.

What can you know from this information?

- A. The posture is healthy, but CPDI has detected multiple vulnerabilities on the device.
- B. The posture is unhealthy, but CPDI has not detected any vulnerabilities on the device.
- C. The posture is unknown, and CPDI has detected exactly four vulnerabilities on the device.
- **D. The posture is unhealthy, and CPDI has also detected at least one vulnerability on the device.**

正解: D

解説:

In HPE Aruba Networking ClearPass Device Insight (CPDI), a device with a Risk Score of 90 indicates that the posture is unhealthy, and CPDI has detected at least one vulnerability on the device. The risk score is a reflection of the device's security posture and detected vulnerabilities. A high risk score, such as 90, typically signifies significant security concerns, including the presence of vulnerabilities that could be exploited, thereby categorizing the device as a high-risk asset within the network.

Reference: ClearPass Device Insight documentation and security settings guides explain how risk scores are calculated and interpreted, including the impact of posture assessment and vulnerability detection on overall device risk ratings.

質問 # 47

You have run an Active Endpoint Security Report on HPE Aruba Networking ClearPass. The report indicates that hundreds of endpoints have MAC addresses but no known IP addresses.

What is one step for addressing this issue?

- A. Set up network devices to implement RADIUS accounting to CPPM.
- **B. Add CPPM's IP address to the IP helper list on routing switches.**
- C. Set up switches to implement ARP inspection on client VLANs.
- D. Configure CPPM as a Syslog destination on network devices.

正解: B

解説:

When the Active Endpoint Security Report on HPE Aruba Networking ClearPass indicates that endpoints have MAC addresses but no known IP addresses, one effective step to address this issue is to add CPPM's (ClearPass Policy Manager) IP address to the IP helper list on routing switches. This configuration ensures that DHCP requests are forwarded to the ClearPass server, allowing it to track and report the IP addresses assigned to the endpoints. This helps ClearPass maintain an accurate mapping of MAC addresses to IP addresses, improving endpoint visibility and security management.

Reference: ClearPass configuration guides and best practices documentation outline the importance of integrating ClearPass with network infrastructure using IP helper addresses to ensure comprehensive endpoint visibility and management.

質問 # 48

You have installed an HPE Aruba Networking Network Analytic Engine (NAE) script on an AOS-CX switch to monitor a particular function.

Which additional step must you complete to start the monitoring?

- A. Enable NAE, which is disabled by default.
- **B. Create an agent from the script.**
- C. Reboot the switch.
- D. Edit the script to define monitor parameters.

正解: B

解説:

After installing an HPE Aruba Networking Network Analytic Engine (NAE) script on an AOS-CX switch, the additional step required to start the monitoring is to create an agent from the script. The agent is responsible for executing the script and collecting the monitoring data as defined by the script parameters.

1. Script Installation: Installing the script provides the logic and parameters for monitoring.
2. Agent Creation: Creating an agent from the script activates the monitoring process, allowing the NAE to begin tracking the specified function.
3. Operational Step: This step ensures that the monitoring logic is applied and the data collection starts as per the script's configuration.

Reference: Aruba AOS-CX documentation and Network Analytics Engine guides outline the process of script installation and the necessity of creating an agent to activate monitoring.

質問 # 49

You are using OpenSSL to obtain a certificate signed by a Certification Authority (CA). You have entered this command:

```
openssl req -new -out file1.pem -newkey rsa:3072 -keyout file2.pem
```

```
Enter PEM pass phrase: *****
```

```
Verifying - Enter PEM pass phrase: *****
```

```
Country Name (2 letter code) [AU]:US
```

```
State or Province Name (full name) [Some-State]:California
```

```
Locality Name (eg, city) []:Sunnyvale
```

```
Organization Name (eg, company) [Internet Widgits Pty Ltd]:example.com
```

```
Organizational Unit Name (eg, section) []:Infrastructure
```

```
Common Name (e.g. server FQDN or YOUR name) []:radius.example.com
```

What is one guideline for continuing to obtain a certificate?

- A. You should concatenate file1.pem and file2.pem into a single file, and submit that to the desired CA to sign.
- **B. You should submit file1.pem, but not file2.pem, to the desired CA to sign.**
- C. You should submit file2.pem, but not file1.pem, to the desired CA to sign.
- D. You should use a third-party tool to encrypt file2.pem before sending it and file1.pem to the CA.

正解: B

解説:

When using OpenSSL to obtain a certificate signed by a Certification Authority (CA), you should submit the Certificate Signing Request (CSR) file, which is file1.pem, to the CA. The CSR contains the information about the entity requesting the certificate and the public key, but not the private key, which is in file2.pem.

The CA uses the information in the CSR to create and sign the certificate.

1. CSR Submission: The CSR (file1.pem) includes the public key and the entity information required by the CA to issue a certificate.
2. Private Key Security: The private key (file2.pem) should never be sent to the CA or shared; it remains securely stored on the requestor's server.
3. Certificate Issuance: After the CA signs the CSR, the resulting certificate can be used with the private key to establish secure communications.

Reference: OpenSSL documentation and best practices for obtaining and managing certificates emphasize the importance of keeping the private key secure and only submitting the CSR to the CA.

質問 # 50

A company has HPE Aruba Networking APs, which authenticate users to HPE Aruba Networking ClearPass Policy Manager (CPPM).

What does HPE Aruba Networking recommend as the preferred method for assigning clients to a role on the AOS firewall?

- A. Create user rules on the APs to assign clients to roles based on a variety of criteria.
- B. OCreate server rules on the APs to assign clients to roles based on RADIUS IETF attributes returned by CPPM.
- **C. Configure CPPM to assign the role using a RADIUS enforcement profile with an Aruba-User-Role VSA.**
- D. Configure CPPM to assign the role using a RADIUS enforcement profile with a RADIUS:IETF Username attribute.

正解: C

解説:

The preferred method for assigning clients to a role on the AOS firewall is to configure HPE Aruba Networking ClearPass Policy

Manager (CPPM) to assign the role using a RADIUS enforcement profile with an Aruba-User-Role VSA (Vendor-Specific Attribute). This method allows ClearPass to dynamically assign the appropriate user roles to clients during the authentication process, ensuring that role-based access policies are consistently enforced across the network.

Reference: Aruba ClearPass documentation and RADIUS configuration guides provide detailed instructions on setting up RADIUS enforcement profiles and using the Aruba-User-Role VSA for role assignment.

質問 # 51
