The Certified Data Privacy Solutions Engineer (CDPSE) certification is one of the hottest career advancement credentials in the modern ISACA world. The Certified Data Privacy Solutions Engineer (CDPSE) certification can help you to demonstrate your expertise and knowledge level. With only one badge of Certified Data Privacy Solutions Engineer in CDPSE Certification, successful candidates can advance their careers and increase their earning potential.

To qualify for the CDPSE certification, candidates must have at least five years of experience in IT and a minimum of three years of experience in data privacy. They must also have completed a minimum of 20 hours of training in data privacy and pass the CDPSE Certification Exam. CDPSE exam is a four-hour, computer-based test that consists of 100 multiple-choice questions.

CDPSE Torrent Pdf & CDPSE Latest Vce & CDPSE Valid Study Material

TestInsides examines it regularly for new updates so that you always get new Certified Data Privacy Solutions Engineer (CDPSE) practice questions. Since it is a printable format, you can do a paper study. The Certified Data Privacy Solutions Engineer (CDPSE) PDF Dumps document is accessible from every location at any time. This Certified Data Privacy Solutions Engineer (CDPSE) software has a simple-to-use interface. By using the Certified Data Privacy Solutions Engineer (CDPSE) practice exam software, you can evaluate your mistakes at the end of every take and overcome them. Our software helps you to get familiar with the format of the original Certified Data Privacy Solutions Engineer (CDPSE) test.

ISACA Certified Data Privacy Solutions Engineer Sample Questions (Q183-Q188):

NEW QUESTION # 183

Which of the following is the BEST way to address threats to mobile device privacy when using beacons as a tracking technology?

- A. Disable Bluetooth services.
- B. Enable antivirus for mobile devices.
- C. Disable location services.
- D. Enable Trojan scanners.

Answer: A

Explanation:

Explanation

Beacons use Bluetooth low-energy (BLE) wireless technology to transmit information to nearby devices that have Bluetooth enabled. By disabling Bluetooth services on the mobile device, the user can prevent beacons from detecting and tracking their location and sending them unwanted messages or advertisements. This can help protect the user's privacy and avoid potential security risks from malicious beacons. Disabling location services, enabling Trojan scanners, or enabling antivirus for mobile devices are not effective ways to address threats to mobile device privacy when using beacons as a tracking technology, because they do not prevent the communication between beacons and the mobile device.

NEW QUESTION # 184

Which of the following is the BEST control to detect potential internal breaches of personal data?

- A. Employee background Checks
- B. Data loss prevention (DLP) systems
- C. User behavior analytics tools
- D. Classification of data

Answer: C

Explanation:

Explanation

User behavior analytics tools are the best control to detect potential internal breaches of personal data because they monitor and analyze the activities and patterns of users on the network and systems, and alert or block any anomalous or suspicious behavior that may indicate unauthorized access, misuse or exfiltration of personal data. Data loss prevention (DLP) systems, employee background checks and classification of data are useful controls to prevent or mitigate internal breaches of personal data, but they do not necessarily detect them.

NEW QUESTION # 185

Which of the following should be established FIRST before authorizing remote access to a data store containing personal data?

- A. Multi-factor authentication
- B. Virtual private network (VPN)
- C. Network security standard
- D. Privacy policy

Answer: B

Explanation:

Explanation

A virtual private network (VPN) is a technology that creates a secure and encrypted connection over a public network, such as the internet. A VPN should be established first before authorizing remote access to a data store containing personal data, as it protects the data from unauthorized interception, modification, or disclosure by third parties. A VPN also helps to ensure the identity and authenticity of the remote users and devices accessing the data store. References: 2 Domain 2, Task 8

NEW QUESTION # 186

Within a regulatory and legal context, which of the following is the PRIMARY purpose of a privacy notice sent to customers?

- A. To establish the organization's responsibility for protecting personal data during the relationship with the data subject
- B. To inform customers about the procedure to legally file complaints for misuse of personal data
- **C. To provide transparency to the data subject on the intended use of their personal data**
- D. To educate data subjects regarding how personal data will be safeguarded

Answer: C

Explanation:

Explanation

A privacy notice is a document that informs data subjects about how their personal data is collected, processed, stored, shared, and protected by an organization. The primary purpose of a privacy notice is to provide transparency to the data subject on the intended use of their personal data, as well as their rights and choices regarding their data. A privacy notice also helps the organization comply with legal and regulatory requirements, such as obtaining consent, demonstrating accountability, and fulfilling the principle of fairness and lawfulness.

NEW QUESTION # 187

Which of the following is the BEST way to ensure third-party providers that process an organization's personal data are addressed as part of the data privacy strategy?

- A. Outsource personal data processing to the same third party
- B. Require service level agreements (SLAs) to ensure data integrity while safeguarding confidentiality
- **C. Require independent audits of the providers' data privacy controls**
- D. Require data dictionaries from service providers that handle the organization's personal data.

Answer: C

Explanation:

Explanation

Requiring independent audits of the providers' data privacy controls is the best way to ensure third-party providers that process an organization's personal data are addressed as part of the data privacy strategy.

Independent audits can verify that the providers are complying with the applicable data privacy laws and regulations, as well as the organization's own policies and standards. Independent audits can also identify any gaps or weaknesses in the providers' data privacy controls and recommend corrective actions or improvements.
