EMC Dell Unity Deploy 2023 Exam Sample Questions (Q154-Q159):

NEW QUESTION # 154
What is a characteristic of FAST VP?

- A. Fast VP optimizes data replacement by moving 1 GB slices between disk tiers.

- B. Users can set the Fast VP data relocation rate.
- C. Fast VP data relocation runs in the background at all times once it is enabled.
- D. Users can enable or disable FAST VP at the LUN level.

Answer: B

Explanation:
FAST VP (Fully Automated Storage Tiering for Virtual Pools) is a feature that automatically moves data within a storage pool based on the performance requirements and access patterns of the data. FAST VP data relocation runs in the background according to a user-defined schedule and rate. The schedule determines when the data relocation starts and ends, and the rate determines how much system resources are used for the data relocation. Users can set the Fast VP data relocation rate to High, Medium, Low, or None. High means that the data relocation has the highest priority and uses the most system resources, while None means that the data relocation is disabled. Fast VP data relocation does not run at all times, but only during the scheduled window. Fast VP optimizes data placement by moving 256 MB slices between disk tiers, not 1 GB slices.
Users cannot enable or disable FAST VP at the LUN level, but only at the storage pool level.
