Fortinet NSE 6 - OT Security 7.6 Architect Sample Questions (Q73-Q78):

NEW QUESTION # 73

Which type of attack posed by skilled and malicious users of security level 3 (SL 3) of IEC 62443 is designed to defend against intentional attacks?

- A. Low access to resources
- B. Unintentional operator error
- C. Access to moderate resources
- D. Substantial resources

Answer: C

Explanation:

SL 1 → Protects against unintentional operator error or casual mistakes.

SL 2 → Protects against intentional misuse by attackers with low resources.

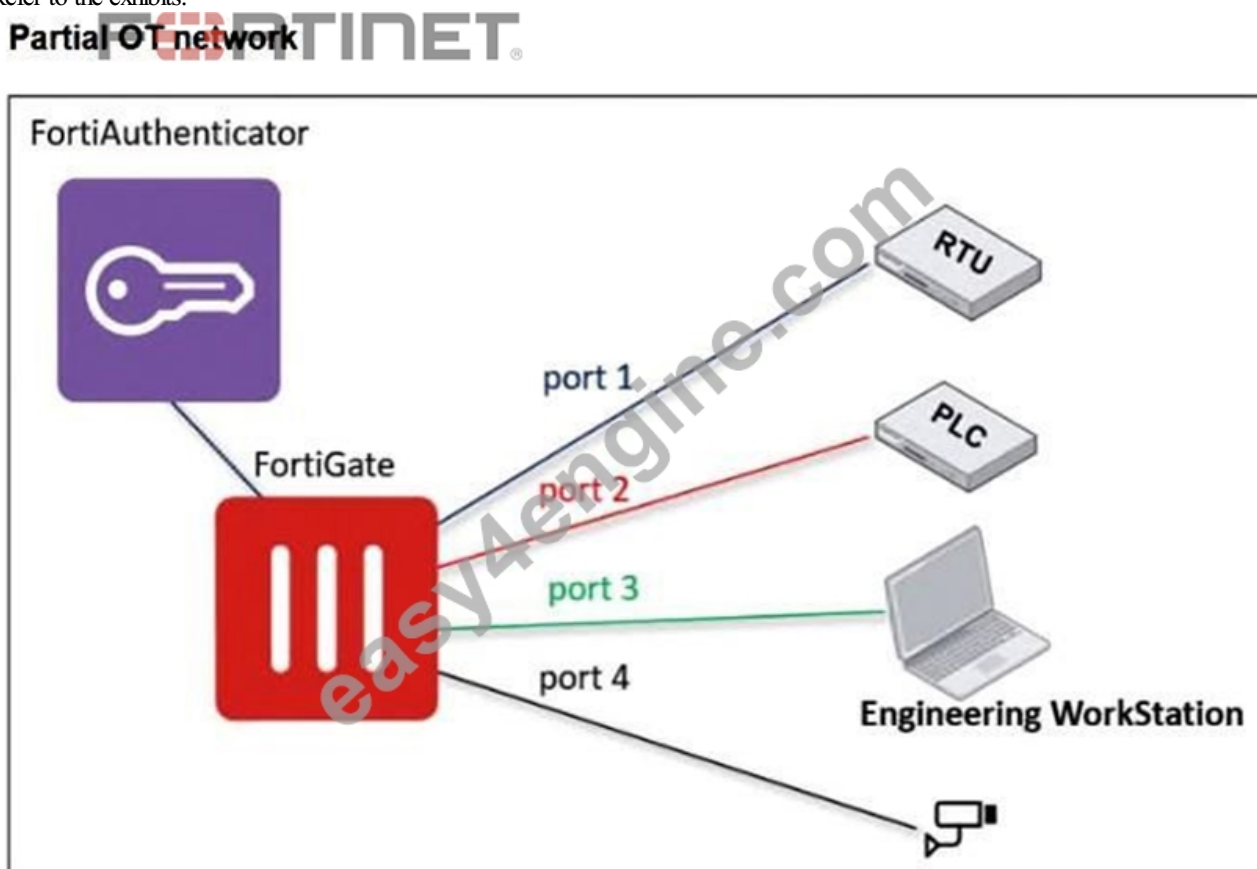

SL 3 → Protects against skilled and malicious attackers with moderate resources.

SL 4 → Protects against highly skilled attackers with substantial resources (e.g., nation-state level).

NEW QUESTION # 74

Refer to the exhibits.

Partial OT network

Partial firewall policies configuration						
Policy	ID	Source	Destination	Schedule	Service	
<input type="checkbox"/> RTU_full_access (8)	8	<input checked="" type="checkbox"/> Engineering-Workstation <input checked="" type="checkbox"/> FortiAuthenticator	<input checked="" type="checkbox"/> RTU	<input checked="" type="checkbox"/> always	<input checked="" type="checkbox"/> HTTP <input checked="" type="checkbox"/> HTTPS <input checked="" type="checkbox"/> ALL_ICMP	
<input type="checkbox"/> RTU_limited_access (9)	9	<input checked="" type="checkbox"/> Engineering-Workstation	<input checked="" type="checkbox"/> RTU	<input checked="" type="checkbox"/> always	<input checked="" type="checkbox"/> ALL	

A partial OT network and firewall policies configuration are shown.

You added authentication in the firewall policy from Engineering Workstation to RTU to improve the security. When verifying your configuration, you notice that you can still access RTU from Engineering Workstation without an authentication prompt.

What must you do to enforce authentication?

- A. You must enable Fortinet Single Sign-On (FSSO).
- B. You must reboot FortiGate.
- C. You must add a local user instead of FortiAuthenticator.
- **D. You must add authentication in firewall policy 9.**

Answer: D

Explanation:

Firewall policies are evaluated top-down, and a matching policy without authentication is applied before the one requiring authentication. Adding authentication to the higher-priority policy ensures that all matching traffic is subject to authentication.

NEW QUESTION # 75

Which industrial protocol does not support VLANs? (Choose one answer)

- **A. EtherCAT**
- B. Ethernet over industrial protocol
- C. [Not clearly visible in the exhibit]
- D. Modbus over TCP

Answer: A

Explanation:

The correct answer is C. EtherCAT.

The study guide states that for industrial Ethernet protocols, "such as Ethernet/IP and Modbus/TCP, you can use VLANs to segment your physical LAN into multiple logical LANs." This directly confirms that Ethernet/IP and Modbus/TCP support VLAN-based segmentation in the OT context.

By contrast, the guide explains that "EtherCAT skips layers 3 to 6 to deliver real-time communication" and describes it as an "Open-Software Modified-Ethernet" approach. Because it does not operate like the standard Ethernet/IP model used for normal VLAN-based segmentation, EtherCAT is the protocol identified here as not supporting VLANs in the way Ethernet/IP and Modbus/TCP do.

So, based on the study guide comparison, the verified answer is EtherCAT.

NEW QUESTION # 76

Which two statements about the Modbus protocol are true? (Choose two.)

- A. You can implement Modbus networking settings on internetworking devices.
- B. Modbus uses UDP frames to transport MBAP and function codes.
- **C. Modbus is used to establish communication between intelligent devices.**
- **D. Most of the PLC brands come with a built-in Modbus module.**

Answer: C,D

NEW QUESTION # 77

When you create a user or host profile, which three criteria can you use? (Choose three.)

- A. Host or user group memberships
- B. An existing access control policy
- C. Host or user attributes
- D. Location
- E. Administrative group membership

Answer: A,C,D
