Our PassReview team always provide the best quality service in the perspective of customers. There are many reasons why we are be trusted: 24-hour online customer service, the free experienced demo for PCEP-30-02 exam materials, diversity versions, one-year free update service after purchase, and the guarantee of no help full refund. If you can successfully pass the PCEP-30-02 Exam with the help of our PassReview, we hope you can remember our common efforts.

More and more people hope to enhance their professional competitiveness by obtaining PCEP-30-02 certification. However, under the premise that the pass rate is strictly controlled, fierce competition makes it more and more difficult to pass the PCEP-30-02 examination. Whether you are the first or the second or even more taking PCEP-30-02 examination, our PCEP-30-02 exam prep not only can help you to save much time and energy but also can help you pass the exam. In the other words, passing the exam once will no longer be a dream.

>> PCEP-30-02 Valid Test Cost <<

Test PCEP-30-02 Cram, Real PCEP-30-02 Exams

There are many benefits after you pass the PCEP-30-02 certification such as you can enter in the big company and double your wage. Our PCEP-30-02 study materials boost high passing rate and hit rate so that you needn't worry that you can't pass the test too much. We provide free tryout before the purchase to let you decide whether it is valuable or not by yourself. To further understand the merits and features of our PCEP-30-02 Practice Engine you could look at the introduction of our product in detail on our website.

Python Institute PCEP - Certified Entry-Level Python Programmer Sample Questions (Q29-Q34):

NEW QUESTION # 29

What happens when the user runs the following code?

```
total = 0
for i in range(4):
    if 2 * i < 4:
        total += 1
    else:
        total += 1
print(total)
```

- A. The code outputs 3.
- B. The code enters an infinite loop.
- C. The code outputs 2.
- D. The code outputs 1.

Answer: C

Explanation:

Explanation

The code snippet that you have sent is calculating the value of a variable "total" based on the values in the range of 0 to 3. The code is as follows:

total = 0 for i in range(0, 3): if i % 2 == 0: total = total + 1 else: total = total + 2 print(total) The code starts with assigning the value 0 to the variable "total". Then, it enters a for loop that iterates over the values 0, 1, and 2 (the range function excludes the upper bound). Inside the loop, the code checks if the current value of "i" is even or odd using the modulo operator (%). If "i" is even, the code adds 1 to the value of "total". If "i" is odd, the code adds 2 to the value of "total". The loop ends when "i" reaches 3, and the code prints the final value of "total" to the screen.

The code outputs 2 to the screen, because the value of "total" changes as follows:

When i = 0, total = 0 + 1 = 1

When i = 1, total = 1 + 2 = 3

When i = 2, total = 3 + 1 = 4

When i = 3, the loop ends and total = 4 is printed

Therefore, the correct answer is B. The code outputs 2.

NEW QUESTION # 30

Which of the following expressions evaluate to a non-zero result? (Select two answers.)

- A. $1 ** 3 / 4 - 1$
- B. $2 ** 3 / A - 2$
- C. $4 / 2 ** 3 - 2$
- D. $1 * 4 // 2 ** 3$

Answer: B,C

Explanation:

In Python, the ** operator is used for exponentiation, the / operator is used for floating-point division, and the // operator is used for integer division. The order of operations is parentheses, exponentiation, multiplication /division, and addition/subtraction. Therefore, the expressions can be evaluated as follows:

A). $2 ** 3 / A - 2 = 8 / A - 2$ (assuming A is a variable that is not zero or undefined) B. $4 / 2 ** 3 - 2 = 4 / 8 - 2$

$= 0.5 - 2 = -1.5$ C. $1 ** 3 / 4 - 1 = 1 / 4 - 1 = 0.25 - 1 = -0.75$ D. $1 * 4 // 2 ** 3 = 4 // 8 = 0$ Only expressions A and B evaluate to non-zero results.

NEW QUESTION # 31

Assuming that the `phone_dir` dictionary contains `name: number` pairs, arrange the code boxes to create a valid line of code which retrieves Martin Eden's phone number, and assigns it to the `number` variable.

]

number

"Martin Eden"

[

PYTHON INSTITUTE
Open Education & Development Group

Answer:

Explanation:

]

number

"Martin Eden"

[

PYTHON INSTITUTE
Open Education & Development Group

number

=

phone_dir

[

"Martin Eden"

]

Explanation

number

=

phone_dir

[

"Martin Eden"

]

```
number = phone_dir["Martin Eden"]
```

This code uses the square brackets notation to access the value associated with the key "Martin Eden" in the `phone_dir` dictionary. The value is then assigned to the variable `number`. A dictionary is a data structure that stores key-value pairs, where each key is unique and can be used to retrieve its corresponding value. You can find more information about dictionaries in Python in the following references:

[Python Dictionaries - W3Schools]

[Python Dictionary (With Examples) - Programiz]

[5.5. Dictionaries - How to Think Like a Computer Scientist ...]

NEW QUESTION # 32

Insert the code boxes in the correct positions in order to build a line of code which asks the user for an Integer value and assigns it to the `depth` variable.

(Note: some code boxes will not be used.)

PYTHON INSTITUTE
Open Education & Development Group

```

input(
    "Enter immersion depth:" )

float(
    ==

int(

```

depth =

float(
    ==

int( input( "Enter immersion depth:" ))

```

NEW QUESTION # 33

Which of the following are the names of Python passing argument styles?
(Select two answers.)

- A. positional
- B. reference
- C. keyword
- D. indicator

Answer: A,C

Explanation:

Explanation

Keyword arguments are arguments that are specified by using the name of the parameter, followed by an equal sign and the value of the argument. For example, `print (sep='-', end='!')` is a function call with keyword arguments. Keyword arguments can be used to pass arguments in any order, and to provide default values for some arguments¹.

Positional arguments are arguments that are passed in the same order as the parameters of the function definition. For example, `print ('Hello', 'World')` is a function call with positional arguments. Positional arguments must be passed before any keyword arguments, and they must match the number and type of the parameters of the function².

NEW QUESTION # 34

.....

We have confidence and ability to make you get large returns but just need input small investment. our PCEP-30-02 study materials provide a platform which help you gain knowledge in order to let you outstanding in the labor market and get satisfying job that you like. The content of our PCEP-30-02 question torrent is easy to master and simplify the important information. It conveys more important information for PCEP-30-02 Exam with less answers and questions, thus the learning is easy and efficient. We believe our latest PCEP-30-02 exam torrent will be the best choice for you.

Test PCEP-30-02 Cram: https://www.passreview.com/PCEP-30-02_exam-braindumps.html

As a wise person, it is better to choose our PCEP-30-02 study material without any doubts, Our Python Institute PCEP-30-02 Exam will provide you with free PCEP-30-02 dumps questions with verified answers that reflect the actual exam. Firstly, only 5 to 10 minutes after the customer's online payment of PCEP-30-02 actual exam is successful, you can receive an email from the customer service and immediately start learning. Python Institute PCEP-30-02 Valid Test Cost Then you will find you have so many chances to advance in stages to a great level of social influence and success.

I'd forgotten that, and it showed in my writing. What is changing is the size of organizations implementing virtualization, As a wise person, it is better to choose our PCEP-30-02 Study Material without any doubts.

Python Institute PCEP-30-02 Questions - Exam Success Tips And Tricks

Our Python Institute PCEP-30-02 Exam will provide you with free PCEP-30-02 dumps questions with verified answers that reflect the actual exam. Firstly, only 5 to 10 minutes after the customer's online payment of PCEP-30-02 actual exam is successful, you can receive an email from the customer service and immediately start learning.

Then you will find you have so many chances Exam PCEP-30-02 Registration to advance in stages to a great level of social influence and success, We are pleased that you can spare some time to have PCEP-30-02 a look for your reference about our Python Institute PCEP - Certified Entry-Level Python Programmer exam simulator online.
