順便提一下，可以從雲存儲中下載Fast2test 350-701考試題庫的完整版：<https://drive.google.com/open?id=1RC5aYMPT0-07NF1phlK5nRmQpUpduAi>

Fast2test為您提供的針對性培訓和高品質的練習題，是你第一次參加Cisco 350-701 認證考試最好的準備。Fast2test提供的練習題是與真實的考試試題很相似的，能確保你一次成功通過Cisco 350-701 認證考試。如果你考試失敗，我們將全額退款。

Cisco 350-701 考試是為網路安全專業人員設計的認證考試，旨在展示他們在實施和操作 Cisco 安全核心技術方面的知識和技能。該考試是 Cisco 認證網路專業安全 (CCNP Security) 認證計劃的一部分，驗證候選人使用 Cisco 技術實施安全解決方案的能力。該考試驗證候選人對網路安全概念、網路基礎設施、加密、VPN、SIEM 和端點安全的理解。

實施和操作Cisco安全核心技術考試評估考生對各種安全概念的理解，包括網路安全、雲安全、端點保護、安全網路訪問、可見性和執行力。該考試還測試了考生實施和操作Cisco的安全解決方案的能力，包括下一代防火牆、安全訪問、VPN、內容安全和網路安全管理。該認證考試旨在為希望增強在實施和操作Cisco安全解決方案方面的知識和技能的安全專業人員提供支持。

Cisco 350-701 認證考試是涵蓋與網路安全相關的各種主題的綜合性考試。該考試包括 90-110 道多選題，旨在測試考生在多個領域中的知識和技能，包括安全概念、網路安全、雲安全、端點保護和安全網路訪問。考試由 Pearson VUE 提供全程監考和管理的計算機測試服務。通過 Cisco 350-701 認證考試的考生將獲得思科認證網路專家 (CCNP) 安全認證，該認證被全球雇主認可，是網路安全領域卓越表現的標識。

實踐的350-701考試和資格考試的領導者和熱門的350-701: Implementing and Operating Cisco Security Core Technologies

你的夢想是什麼？難道你不想在你的職業生涯中做出一番閃耀的成就嗎？肯定是想的吧。那麼，你就需要不斷提升自己，鍛煉自己。在IT行業中工作的你，通過什麼方法來實現自己的夢想呢？其中，參加IT認定考試並獲得認

證資格，就是你提升自己水準的一種方式。現在，Cisco的350-701考試就是一個非常受歡迎的考試。那麼，你也想拿到這個考試的認證資格嗎？那麼趕緊報名參加吧，Fast2test可以幫助你，所以不用擔心。

最新的 CCNP Security 350-701 免費考試真題 (Q116-Q121):

問題 #116

Refer to the exhibit.

A network administrator configures command authorization for the admin5 user. What is the admin5 user able to do on HQ_Router after this configuration?

- A. set the IP address of an interface
- B. add subinterfaces
- C. complete all configurations
- D. complete no configurations

答案： D

解題說明：

The user "admin5" was configured with privilege level 5. In order to allow configuration (enter global configuration mode), we must type this command:

```
(config)#privilege exec level 5 configure terminal
```

Without this command, this user cannot do any configuration.

Note: Cisco IOS supports privilege levels from 0 to 15, but the privilege levels which are used by default are privilege level 1 (user EXEC) and level privilege 15 (privilege EXEC)

問題 #117

Drag and drop the capabilities from the left onto the correct technologies on the right.

答案：

解題說明：

問題 #118

Which role is a default guest type in Cisco ISE?

- A. Yearly
- B. Full-Time
- C. Monthly
- D. Contractor

答案： B,D

解題說明：

To add switches into the fabric, administrators can use PowerOn Auto Provisioning (POAP) or Seed IP methods. POAP is a feature that automates the process of upgrading software images and installing configuration files on Cisco switches that are being deployed in the network for the first time. Seed IP is a method that allows administrators to specify the IP address of a switch that is already part of the fabric, and then use it to discover and add other switches that are connected to it. Both methods enable administrators to control how switches are added into DCNM for private cloud management. References:

* POAP, section "PowerOn Auto Provisioning (POAP)".

* Seed IP, section "Add Switches".

問題 #119

Which flaw does an attacker leverage when exploiting SQL injection vulnerabilities?

- A. Linux and Windows operating systems

- B. user input validation in a web page or web application
- C. database
- D. web page images

答案： B

問題 #120

What are two workload security models? (Choose two)

- A. on-premises
- B. PaaS
- C. off-premises
- D. SaaS
- E. IaaS

答案： A,E

解題說明：

Workload security models are ways of protecting applications, services, and capabilities that run on a cloud resource. Virtual machines, databases, containers, and applications are all considered cloud workloads. There are different types of cloud deployment models, such as public, private, hybrid, and multicloud. Depending on the deployment model, the cloud workload security can vary in terms of responsibility, visibility, and control.

Infrastructure as a service (IaaS) is a cloud deployment model where the cloud provider offers the basic computing infrastructure, such as servers, storage, and networking, as a service. The customer is responsible for installing, configuring, and managing the operating systems, applications, and security of the workloads that run on the cloud infrastructure. IaaS provides the customer with more flexibility and control over the workload security, but also more complexity and overhead.

On-premises is a deployment model where the customer owns and operates the entire IT infrastructure, including the hardware, software, and security. The customer has full responsibility and control over the workload security, but also the highest cost and maintenance. On-premises deployment can offer more security and compliance than cloud deployment, depending on the customer's security posture and practices.
