

# Reliable AIP-210 Test Experience | Reliable Valid AIP-210 Test Forum: CertNexus Certified Artificial Intelligence Practitioner (CAIP)

BTW, DOWNLOAD part of TestsDumps AIP-210 dumps from Cloud Storage: <https://drive.google.com/open?id=19K6PHt3wJSJQX1RREqLrHphL7TZe57HV>

The simulation of the actual CertNexus AIP-210 test helps you feel the real AIP-210 exam scenario, so you don't face anxiety while giving the final examination. You can even access your last test results, which help to realize your mistakes and try to avoid them while taking the CertNexus AIP-210 Certification test.

With constantly updated CertNexus pdf files providing the most relevant questions and correct answers, you can find a way out in your industry by getting the AIP-210 certification. Our AIP-210 test engine is very intelligence and can help you experienced the interactive study. In addition, you will get the scores after each AIP-210 Practice Test, which can make you know about the weakness and strengthen about the AIP-210 real test , then you can study purposefully.

## DOWNLOAD CertNexus AIP-210 EXAM REAL QUESTIONS AND START THIS JOURNEY.

The CertNexus AIP-210 PDF questions file of TestsDumps has real CertNexus AIP-210 exam questions with accurate answers. You can download CertNexus PDF Questions file and revise CertNexus Certified Artificial Intelligence Practitioner (CAIP) AIP-210 exam questions from any place at any time. We also offer desktop AIP-210 practice exam software which works after installation on Windows computers. The AIP-210 web-based practice test on the other hand needs no software installation or additional plugins. Chrome, Opera, Microsoft Edge, Internet Explorer, Firefox, and Safari support the web-based AIP-210 Practice Exam. You can access the CertNexus AIP-210 web-based practice test via Mac, Linux, iOS, Android, and Windows. TestsDumps CertNexus Certified Artificial Intelligence Practitioner (CAIP) AIP-210 practice test (desktop & web-based) allows you to design your mock test sessions. These CertNexus AIP-210 exam practice tests identify your mistakes and generate your result report on the spot.

### CertNexus AIP-210 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> <li>• Transform numerical and categorical data</li> <li>• Address business risks, ethical concerns, and related concepts in operationalizing the model</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>• Train, validate, and test data subsets</li> <li>• Training and Tuning ML Systems and Models</li> </ul>

- Address business risks, ethical concerns, and related concepts in training and tuning
- Work with textual, numerical, audio, or video data formats

## CertNexus Certified Artificial Intelligence Practitioner (CAIP) Sample Questions (Q22-Q27):

### NEW QUESTION # 22

Which of the following items should be included in a handover to the end user to enable them to use and run a trained model on their own system? (Select three.)

- A. Sample input and output data files
- B. Link to a GitHub repository of the codebase
- C. README document
- D. Intermediate data files
- E. Information on the folder structure in your local machine

**Answer: A,B,C**

Explanation:

A handover is the process of transferring the ownership and responsibility of an ML system from one party to another, such as from the developers to the end users. A handover should include all the necessary information and resources that enable the end users to use and run a trained model on their own system. Some of the items that should be included in a handover are:

\* Link to a GitHub repository of the codebase: A GitHub repository is an online platform that hosts the source code and version control of an ML system. A link to a GitHub repository can provide the end users with access to the latest and most updated version of the codebase, as well as the history and documentation of the changes made to the code.

\* README document: A README document is a text file that provides an overview and instructions for an ML system. A README document can include information such as the purpose, features, requirements, installation, usage, testing, troubleshooting, and license of the system.

\* Sample input and output data files: Sample input and output data files are data files that contain examples of valid inputs and expected outputs for an ML system. Sample input and output data files can help the end users understand how to use and run the system, as well as verify its functionality and performance.

### NEW QUESTION # 23

Which of the following is a privacy-focused law that an AI practitioner should adhere to while designing and adapting an AI system that utilizes personal data?

- A. General Data Protection Regulation (GDPR)
- B. PCIDSS
- C. Sarbanes Oxley (SOX)
- D. ISO/IEC 27001

**Answer: A**

Explanation:

Explanation

The General Data Protection Regulation (GDPR) is a privacy-focused law that an AI practitioner should adhere to while designing and adapting an AI system that utilizes personal data. The GDPR applies to any organization that processes personal data of individuals in the European Union (EU), regardless of where the organization is located. The GDPR grants individuals rights over their personal data, such as the right to access, rectify, erase, restrict, or object to its processing. The GDPR also imposes obligations on organizations that process personal data, such as the duty to obtain consent, conduct data protection impact assessments, implement data protection by design and by default, and ensure accountability and transparency. The GDPR also addresses some specific issues related to AI, such as automated decision-making, profiling, and data portability.

### NEW QUESTION # 24

An HR solutions firm is developing software for staffing agencies that uses machine learning.

The team uses training data to teach the algorithm and discovers that it generates lower employability scores for women. Also, it

predicts that women, especially with children, are less likely to get a high-paying job. Which type of bias has been discovered?

- A. Emergent
- B. Automation
- C. Technical
- **D. Preexisting**

**Answer: D**

Explanation:

Preexisting bias is a type of bias that originates from historical or social contexts, such as stereotypes, prejudices, or discriminations. Preexisting bias can affect the data or the algorithm used for machine learning, as well as the outcomes or decisions made by machine learning. Preexisting bias can cause unfair or harmful impacts on certain groups or individuals based on their attributes, such as gender, race, age, or disability<sup>3</sup>. In this case, the software that uses machine learning generates lower employability scores for women and predicts that women, especially with children, are less likely to get a high-paying job. This indicates that the software has preexisting bias against women, which may reflect the historical or social inequalities or expectations in the labor market.

### NEW QUESTION # 25

We are using the k-nearest neighbors algorithm to classify the new data points. The features are on different scales. Which method can help us to solve this problem?

- A. Square-root transformation
- **B. Normalization**
- C. Log transformation
- D. Standardization

**Answer: B**

Explanation:

Normalization is a method that can help us to solve the problem of features being on different scales when using the k-nearest neighbors algorithm. Normalization is a technique that rescales the values of features to a common range, such as [0, 1] or [-1, 1]. Normalization can help reduce the influence or dominance of some features over others, as well as improve the accuracy and performance of the algorithm<sup>2</sup>.

### NEW QUESTION # 26

Which of the following occurs when a data segment is collected in such a way that some members of the intended statistical population are less likely to be included than others?

- **A. Sampling bias**
- B. Stereotype bias
- C. Algorithmic bias
- D. Systematic value distortion

**Answer: A**

Explanation:

Explanation

Sampling bias occurs when a data segment is collected in such a way that some members of the intended statistical population are less likely to be included than others. This can result in a sample that is not representative of the population and may lead to inaccurate or misleading conclusions. Sampling bias can be caused by various factors, such as non-random sampling methods, non-response, self-selection, or convenience sampling.
