

# 100% Pass Quiz Salesforce - Unparalleled MuleSoft-Integration-Architect-I - Salesforce Certified MuleSoft Integration Architect I Valid Test Vce Free

2025 Latest Pass4Test MuleSoft-Integration-Architect-I PDF Dumps and MuleSoft-Integration-Architect-I Exam Engine Free Share: [https://drive.google.com/open?id=12b1tLA3cBlabM5nt4mcSo\\_7bl8542fLq](https://drive.google.com/open?id=12b1tLA3cBlabM5nt4mcSo_7bl8542fLq)

If you want to walk into the test center with confidence, you should prepare well for MuleSoft-Integration-Architect-I certification. While, where to get the accurate and valid Salesforce study pdf is another question puzzling you. Now, MuleSoft-Integration-Architect-I sure pass exam will help you step ahead in the real exam and assist you get your MuleSoft-Integration-Architect-I Certification easily. Our MuleSoft-Integration-Architect-I test questions answers will provide the best valid and accurate knowledge for you and give you right reference. You will successfully pass your actual test with the help of our high quality and high hit-rate MuleSoft-Integration-Architect-I study torrent.

Perhaps you have wasted a lot of time to playing games. It doesn't matter. It is never too late to change. There is no point in regretting for the past. Our MuleSoft-Integration-Architect-I exam materials can help you get the your desired MuleSoft-Integration-Architect-I certification. You will change a lot after learning our MuleSoft-Integration-Architect-I Study Materials. Also, you will have a positive outlook on life. All in all, abandon all illusions and face up to reality bravely. Our MuleSoft-Integration-Architect-I practice exam will be your best assistant. You are the best and unique in the world. Just be confident to face new challenge!

## MuleSoft-Integration-Architect-I Reliable Test Price, MuleSoft-Integration-Architect-I New Questions

The immediate downloading feature of our MuleSoft-Integration-Architect-I Certification guide is an eminent advantage of our products. Once the pay is done, our customers will receive an e-mail from our company. There is a linkage given by our e-mail, and people can begin their study right away after they have registered in. Our MuleSoft-Integration-Architect-I exam braindumps are available for downloading without any other disturbing requirements as long as you have paid successfully, which is increasingly important to an examinee as he or she has limited time for personal study. Therefore, our Salesforce Certified MuleSoft Integration Architect I guide torrent is attributive to high-efficient learning.

## Salesforce Certified MuleSoft Integration Architect I Sample Questions (Q163-Q168):

### NEW QUESTION # 163

An organization has deployed runtime fabric on an eight node cluster with performance profile. An API uses and non persistent object store for maintaining some of its state data. What will be the impact to the state data if server crashes?

- A. State data is rolled back to a previously saved version
- B. State data is preserved as long as more than one more is unaffected by the crash
- C. State data is lost

- D. State data is preserved

**Answer: C**

#### NEW QUESTION # 164

Which key DevOps practice and associated Anypoint Platform component should a MuleSoft integration team adopt to improve delivery quality?

- A. Manual testing with Anypoint Studio
- B. Passive monitoring with Anypoint Monitoring
- **C. Automated testing with MUnit**
- D. A Continuous design with API Designer

**Answer: C**

Explanation:

To improve delivery quality, a MuleSoft integration team should adopt automated testing with MUnit. MUnit is MuleSoft's testing framework that allows developers to create, design, and run unit and integration tests on their Mule applications. Automated testing with MUnit ensures that each part of the Mule application is tested for correctness and performance, catching issues early in the development cycle. This practice leads to higher quality code, reduced defects, and more reliable integrations.

Other practices mentioned, such as continuous design with API Designer and passive monitoring with Anypoint Monitoring, are important but do not directly address the need for rigorous and automated testing to ensure quality.

#### NEW QUESTION # 165

According to the Internet Engineering Task Force (IETF), which supporting protocol does File Transfer Protocol (FTP) use for reliable communication?

- A. Hypertext Transfer Protocol (HTTP)
- **B. Transmission Control Protocol (TCP)**
- C. Lightweight Directory Access Protocol (LDAP)
- D. A Secure Sockets Layer (SSL)

**Answer: B**

#### NEW QUESTION # 166

What aspects of a CI/CD pipeline for Mule applications can be automated using MuleSoft-provided Maven plugins?

- **A. Compile, package, unit test, validate unit test coverage, deploy**
- B. Compile, package, unit test, deploy, integration test (Incorrect)
- C. Compile, package, unit test, deploy, create associated API instances in API Manager
- D. Import from API designer, compile, package, unit test, deploy, publish to Anypoint Exchange

**Answer: A**

Explanation:

Correct answer is "Compile, package, unit test, validate unit test coverage, deploy": Anypoint Platform supports continuous integration and continuous delivery using industry standard tools Mule Maven Plugin The Mule Maven plugin can automate building, packaging and deployment of Mule applications from source projects Using the Mule Maven plugin, you can automate your Mule application deployment to CloudHub, to Anypoint Runtime Fabric, or on-premises, using any of the following deployment strategies \* CloudHub deployment \* Runtime Fabric deployment \* Runtime Manager REST API deployment \* Runtime Manager agent deployment MUnit Maven Plugin The MUnit Maven plugin can automate test execution, and ties in with the Mule Maven plugin. It provides a full suite of integration and unit test capabilities, and is fully integrated with Maven and Surefire for integration with your continuous deployment environment. Since MUnit 2.x, the coverage report goal is integrated with the maven reporting section. Coverage Reports are generated during Maven's site lifecycle, during the coverage-report goal. One of the features of MUnit Coverage is to fail the build if a certain coverage level is not reached. MUnit is not used for integration testing Also publishing to

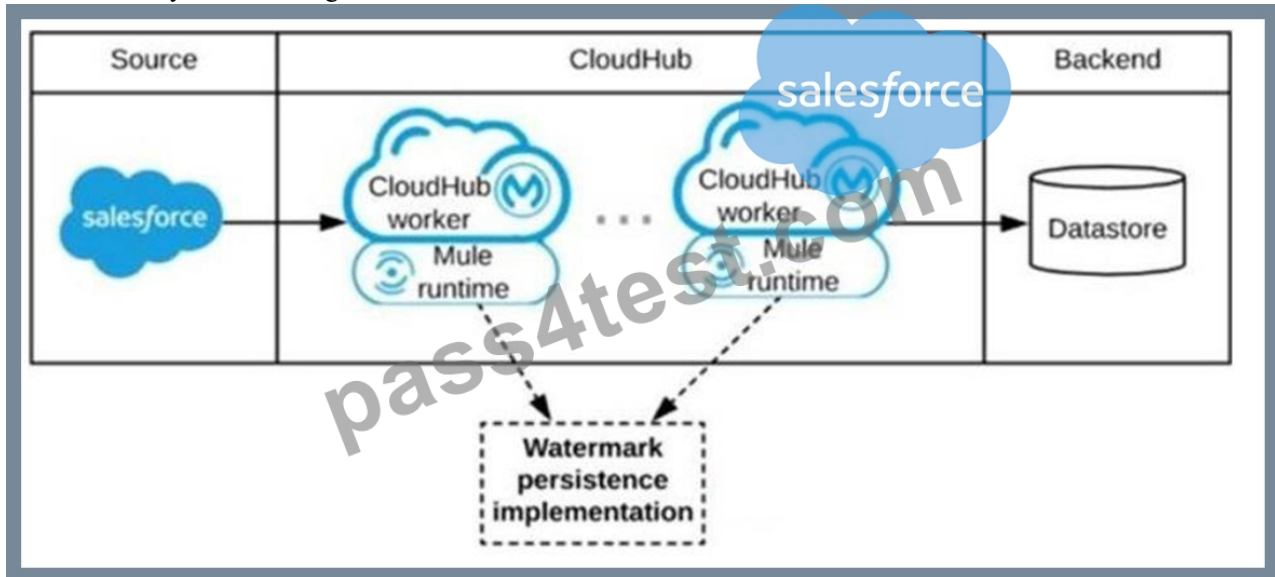

Anypoint Exchange or to create associated API instances in API Manager is not a part of CI/CD pipeline which can be achieved using mulesoft provided maven plugin. Architecture mentioned in the question can be diagrammatically put as below. Persistent Object Store is the correct answer.

\* Mule Object Stores: An object store is a facility for storing objects in or across Mule applications. Mule uses object stores to persist data for eventual retrieval.

Mule provides two types of object stores:

1) In-memory store - stores objects in local Mule runtime memory. Objects are lost on shutdown of the Mule runtime. So we can't use in-memory store in our scenario as we want to share watermark within all cloudhub workers.

2) Persistent store - Mule persists data when an object store is explicitly configured to be persistent. Hence this watermark will be available even if any of the worker goes down.

#### NEW QUESTION # 167

Refer to the exhibit.

A Mule application is deployed to a multi-node Mule runtime cluster. The Mule application uses the competing consumer pattern among its cluster replicas to receive JMS messages from a JMS queue. To process each received JMS message, the following steps are performed in a flow:

Step 1: The JMS Correlation ID header is read from the received JMS message.

Step 2: The Mule application invokes an idempotent SOAP webservice over HTTPS, passing the JMS Correlation ID as one parameter in the SOAP request.

Step 3: The response from the SOAP webservice also returns the same JMS Correlation ID.

Step 4: The JMS Correlation ID received from the SOAP webservice is validated to be identical to the JMS Correlation ID received in Step 1.

Step 5: The Mule application creates a response JMS message, setting the JMS Correlation ID message header to the validated JMS Correlation ID and publishes that message to a response JMS queue.

Where should the Mule application store the JMS Correlation ID values received in Step 1 and Step 3 so that the validation in Step 4 can be performed, while also making the overall Mule application highly available, fault-tolerant, performant, and maintainable?

- A. Both Correlation ID values should be stored as Mule event variable/attribute
- B. Both Correlation ID values should be stored in a non-persistent object store
- C. Both Correlation ID values should be stored in a persistent object store
- D. The Correlation ID value in Step 1 should be stored in a persistent object store. The Correlation ID value in step 3 should be stored as a Mule event variable/attribute

**Answer: D**

Explanation:

\* If we store Correlation id value in step 1 as Mule event variables/attributes, the values will be cleared after server restart and we want system to be fault tolerant.

\* The Correlation ID value in Step 1 should be stored in a persistent object store.

\* We don't need to store Correlation ID value in Step 3 to persistent object store. We can store it but as we also need to make application performant. We can avoid this step of accessing persistent object store.

\* Accessing persistent object stores slow down the performance as persistent object stores are by default stored in shared file

systems.

\* As the SOAP service is idempotent in nature. In case of any failures, using this Correlation ID saved in first step we can make call to SOAP service and validate the Correlation ID.

Top of Form

Additional Information:

\* Competing Consumers are multiple consumers that are all created to receive messages from a single Point-to-Point Channel.

When the channel delivers a message, any of the consumers could potentially receive it.

The messaging system's implementation determines which consumer actually receives the message, but in effect the consumers compete with each other to be the receiver. Once a consumer receives a message, it can delegate to the rest of its application to help process the message.

\* In case you are unaware about term idempotent re is more info:

Idempotent operations means their result will always same no matter how many times these operations are invoked.
