Guaranteed Fire-Inspector-II Passing, New Fire-Inspector-II Test Pdf

Our third format is the desktop practice Fire-Inspector-II exam software which can be used easily after installing it on your Windows laptop and computers. These formats are there so that applicants with different study styles can use them to attempt the 67 - Fire Inspector II Exam (Fire-Inspector-II) PRACTICE QUESTIONS successfully. The practice material of ITdumpsfree can be instantly accessed just after purchasing it.

International Code Council 67 - Fire Inspector II Exam Sample Questions (Q32-Q37):

NEW QUESTION # 32

For Halon 1211 hand-hose-line systems, all hoses for high-pressure systems must be tested at ___ psi

- A. 0
- B. 2,500
- C. 1,500
- D. 1

Answer: C

Explanation:

Reference to Halon 1211 Hand-Hose-Line System Requirements:

NFPA 12A (Standard on Halon 1211 Fire Extinguishing Systems), Section 6.5, states that all hoses for high-pressure Halon 1211 hand-hose-line systems must be tested at 1,500 psi to ensure they can withstand operational pressure without failure. The International Fire Code (IFC 2021), Section 904.10, also references the requirements for Halon 1211 systems, ensuring proper testing for system integrity.

Purpose of Pressure Testing:

High-pressure Halon 1211 systems operate under significant force, and hose failures could result in loss of fire suppression capability or safety hazards.

Testing at 1,500 psi ensures hoses can handle peak pressures without rupture or degradation over time.

Clarification of Incorrect Answer Choices:

A: 600 psi # Incorrect

Too low for high-pressure systems, insufficient to verify hose integrity.

B: 900 psi # Incorrect

Below the required 1,500 psi standard for high-pressure Halon 1211 hoses.

D: 2,500 psi # Incorrect

Exceeds the required test pressure per NFPA 12A; unnecessary over-testing could damage hoses.

Conclusion:

The correct and verified answer is C (1,500 psi) based on NFPA 12A and IFC 904.10, ensuring compliance with Halon 1211 high-pressure system testing standards.

NEW QUESTION # 33

In a control area where flammable liquid storage containers are in piles, there shall be a minimum of ___ in. of clearance between the top of the storage and the deflector or discharge orifices of a sprinkler system.

- A. 0
- **B. 1**
- C. 2
- D. 3

Answer: B

Explanation:

Clearance Requirement for Sprinkler Systems Over Flammable Liquid Storage According to International Fire Code (IFC) 2021, Section 5004.6 and NFPA 30: Flammable and Combustible Liquids Code, Section 16.5.1, there must be a minimum of 18 inches of clearance between the top of flammable liquid storage and the deflector or discharge orifices of a sprinkler system.

This ensures unobstructed sprinkler discharge for effective fire suppression.

2. Why 18 Inches is the Correct Answer

The 18-inch clearance allows sprinklers to operate properly, ensuring water distribution is not blocked by stored materials.

NFPA 13 also mandates an 18-inch minimum clearance for standard storage applications with sprinklers.

3. Verification of Other Options

Option B (24 inches) - Incorrect, as the IFC and NFPA specify 18 inches as the minimum requirement.

Option C (30 inches) - Incorrect, as this exceeds the required minimum clearance.

Option D (36 inches) - Incorrect, as the IFC and NFPA do not require this much clearance.

Reference Sources:

International Fire Code (IFC) 2021 - Section 5004.6 (Sprinkler Clearance Over Flammable Liquid Storage) NFPA 30: Flammable and Combustible Liquids Code - Section 16.5.1 NFPA 13: Standard for the Installation of Sprinkler Systems - Minimum Clearance Requirements ICC Fire Inspector II Study Guide (2021) Thus, the correct and verified answer is: A. 18 inches. #

NEW QUESTION # 34

Fire inspectors receiving citizen complaints about a building should first:

- A. forward the complaint to the senior inspector.
- **B. record all pertinent information.**
- C. investigate the history of the building.
- D. inform the owner of the building that a complaint has been filed against him.

Answer: B

Explanation:

Reference to Fire Inspection Procedures for Handling Complaints:

According to the International Fire Code (IFC 2021), Section 104.11, fire inspectors are responsible for investigating complaints regarding fire hazards or code violations.

The first step in responding to a citizen complaint is to record all pertinent information about the issue.

2. Steps in Handling a Fire Safety Complaint:

Step 1: Record detailed information about the complaint, including:

Complainant's name and contact information (if available).

Address and description of the building.

Nature of the alleged fire hazard or code violation.

Step 2: Verify the history of past violations (if necessary).

Step 3: Conduct an inspection to determine if a violation exists.

Step 4: Take appropriate enforcement action, if needed.

3. Clarification of Incorrect Answer Choices:

B: Investigate the history of the building # Incorrect

While past violations can provide context, the first step is to record the details of the current complaint before investigating further.

C: Forward the complaint to the senior inspector # Incorrect

Inspectors do not need to escalate every complaint immediately; instead, they should gather relevant information first.

D: Inform the owner of the building that a complaint has been filed against him # Incorrect Not all complaints result in violations, and notifying the owner prematurely may lead to unnecessary disputes or conflicts.

The inspector should first verify the validity of the complaint before notifying the owner.

4. Conclusion:

The correct and verified answer is A (record all pertinent information) as per IFC 104.11 and fire inspection best practices.

NEW QUESTION # 35

Multiple smoke alarms installed within individual guest rooms of a hotel must comply with which of the following requirements?

- A. They must automatically sound a fire alarm throughout the hotel.
- B. Their batteries must be checked every six months.
- **C. They must be interconnected so that one alarm will activate all alarms within the guest rooms.**
- D. They must initiate an automatic fire suppression or sprinkler system.

Answer: C

Explanation:

Smoke alarm requirements for individual guest rooms in hotels are specified in the 2021 International Fire Code (IFC) Section 907.2.11.3 and NFPA 72 (National Fire Alarm and Signaling Code).

IFC 907.2.11.3 - Smoke Alarms in Group R-1 Occupancies (Hotels and Motels):

Requires smoke alarms in sleeping areas to be interconnected so that when one alarm is activated, it will trigger all alarms within the guest room or suite.

This ensures that occupants in different areas of the same guest room are alerted simultaneously to fire hazards.

Why Other Options Are Incorrect?

A: Their batteries must be checked every six months.

The IFC and NFPA 72 require smoke alarm batteries to be checked, but they do not mandate a six-month inspection schedule.

B: They must automatically sound a fire alarm throughout the hotel.

Smoke alarms within an individual guest room do not have to activate the entire hotel's fire alarm system.

C: They must initiate an automatic fire suppression or sprinkler system.

Smoke alarms are designed for early detection and warning, not for activating fire suppression systems.

NEW QUESTION # 36

The minimum fire-flow for a 3,700-sq. ft. two-family dwelling of Type VB construction with a sprinkler system is ____ GPM.

- A. 0
- B. 1,750
- C. 1,313
- **D. 1,000**

Answer: D

Explanation:

Fire flow for residential buildings is determined based on IFC Appendix B, Table B105.1(1) - Required Fire Flow for One- and

Two-Family Dwellings, Group R-3, and R-4 Buildings.

For a 3,700 sq. ft. two-family dwelling of Type VB construction:

Per Table B105.1(1), the baseline fire flow is 1,750 gpm.

If an NFPA 13D-compliant automatic sprinkler system is installed, the fire flow is reduced by 50%.

$1,750 \text{ gpm} \times 0.50 = 875 \text{ gpm}$, but the minimum allowed for a sprinklered dwelling is 1,000 gpm.

Correct answer: B. 1,000 gpm

NEW QUESTION # 37

.....

This is a crucial part of your study to know your mistakes and overcome them before the International Code Council Fire-Inspector-II final test. Customizable test sessions allow you to modify the setting of the Fire-Inspector-II mock test according to your training needs. Both International Code Council Fire-Inspector-II Practice Tests desktop and web-based create a scenario that gives an exact feeling of the International Code Council Fire-Inspector-II real test.

Guaranteed Fire-Inspector-II Passing: <https://www.itdumpsfree.com/Fire-Inspector-II-exam-passed.html>

Fire-Inspector-II exam dumps have most of knowledge points for the exam, and you can master the major points through practicing. With the help of latest and authentic Guaranteed Fire-Inspector-II Passing - 67 - Fire Inspector II Exam dumps exam questions, you can find the best Guaranteed Fire-Inspector-II Passing - 67 - Fire Inspector II Exam exam preparation kit here and you will also get the 100% guarantee for passing the International Code Council Guaranteed Fire-Inspector-II Passing exam. The 67 - Fire Inspector II Exam (Fire-Inspector-II) certification exam is one of the best credentials in the modern International Code Council world.

If a particular key is stuck or making intermittent New Fire-Inspector-II Test Pdf contact, you'll want to soak or spray the faulty keyswitch with contact cleaner. When you do, if the iPhone is prevented from sending messages Fire-Inspector-II from the primary server, it then tries to send from one of the other servers that you've enabled.

100% Pass Newest Fire-Inspector-II - 67 - Fire Inspector II Exam New Dumps Book

Fire-Inspector-II Exam Dumps have most of knowledge points for the exam, and you can master the major points through practicing. With the help of latest and authentic 67 - Fire Inspector II Exam dumps exam questions, you can find the best 67 - Fire Inspector II Exam Fire-Inspector-II Exams Collection exam preparation kit here and you will also get the 100% guarantee for passing the International Code Council exam.

The 67 - Fire Inspector II Exam (Fire-Inspector-II) certification exam is one of the best credentials in the modern International Code Council world. Secondly, we have the most fervent employees offering help, and the most considerate aftersales help 24/7.

This International Code Council Fire-Inspector-II practice test is designed to simulate the actual exam and help you become familiar with the test format.
