

Latest Nutanix NCP-EUC Study Materials & NCP-EUC Associate Level Exam

DOWNLOAD the newest TestBraindump NCP-EUC PDF dumps from Cloud Storage for free: https://drive.google.com/open?id=1Ey90GHqQTNptLYhXgoyjxHaF_oCnwJfj

All NCP-EUC practice questions you should know are written in them with three versions to choose from: the PDF, the Software and the APP online. At the same time, the experts who compiled the NCP-EUC learning engine are assiduously over so many years in this field. I can say that our experts have become the authority in this career. And they are good at simplifying the content of the NCP-EUC Exam Braindumps to be understood by our customers all over the world.

There are three versions of Nutanix Certified Professional - End User Computing (NCP-EUC) 6.10 Exam test torrent—PDF, software on pc, and app online, the most distinctive of which is that you can install NCP-EUC test answers on your computer to simulate the real exam environment, without limiting the number of computers installed. The buying process of NCP-EUC Test Answers is very simple, which is a big boon for simple people. After the payment of NCP-EUC guide torrent is successful, you will receive an email from our system within 5-10 minutes; click on the link to login and then you can learn immediately with NCP-EUC guide torrent.

NCP-EUC Associate Level Exam, Reliable NCP-EUC Test Practice

With our NCP-EUC pdf torrent, you will minimize your cost on the exam preparation and be ready to pass your NCP-EUC actual test on your first try. TestBraindump will provide you the easiest and quickest way to get the NCP-EUC certification without headache. We will offer the update service for one year. In addition, you will instantly download the NCP-EUC PDF VCE after you complete the payment. With the help of NCP-EUC study dumps, you can just spend 20-30 hours for the preparation. Then you will be confident in the actual test.

Nutanix Certified Professional - End User Computing (NCP-EUC) 6.10 Exam Sample Questions (Q38-Q43):

NEW QUESTION # 38

Refer to the exhibit.

An administrator was made aware that user sessions are being randomly disconnected, and their applications and files being terminated. When the user launches new virtual desktop session, they are authenticated to a fresh desktop. Upon investigating, the administrator discovers that most users log in at 9:00 AM and are active through 2:00 PM.

What configuration setting must be modified in order to resolve this issue?

- A. user inactivity timeout
- B. Reservation timeout
- C. Idle timeout
- D. Max session duration

Answer: D

Explanation:

Nutanix Frame has several session settings that can affect the user experience and resource utilization. One of these settings is Max session duration, which defines how long a user can stay connected to a Frame session before it is automatically terminated¹. If this setting is too low, users might experience random disconnections and lose their applications and files. Therefore, the configuration setting that must be modified in order to resolve this issue is A (Max session duration).

NEW QUESTION # 39

Users are being prompted to restart their non-persistent desktops in the middle of the day. which setting in the gold image would cause this to occur?

- A. The mandatory Windows profile is set to v4,
- B. Java automatically checks for updates every 24 hours.
- C. Windows Update policy is set to Automatic.
- D. The power profile turns the screen off after 10 minutes.

Answer: C

Explanation:

non-persistent VDI machines are deleted when they are rebooted, logged off, or shut down. Therefore, Windows Update policy should be configured to prevent automatic updates that may trigger a restart on these machines¹.

<https://techcommunity.microsoft.com/t5/microsoft-defender-for-endpoint/onboarding-and-servicing-non-persistent-vdi-machines-with/ba-p/1360721>

NEW QUESTION # 40

An administrator is investigating a complaint about poor performance and slow response times for a virtual desktop environment. The administrator has obtained the following statistics from the environment:

- * vCPU to pCPU ratio is 4:1
- * VM Guest OS is Windows 10
- * VMs are configured with 4 vCPUs each
- * VM Guests are configured with 16GB of RAM
- * The SSD cache tier is 85% full, and the capacity tier is 45% full
- * Host CPU utilization is < 40%

What is the most likely cause of the poor performance?

- A. SSD Cache tier is over-committed.
- B. Capacity tier is over-provisioned.
- C. vCPU to pCPU ratio is too high.
- D. VM RAM is over-provisioned.

Answer: A

Explanation:

The performance statistics indicate that the SSD Cache tier is 85% full, which is the primary bottleneck. In a Nutanix cluster, the SSD tier serves as the high-performance "Hot Tier" (Extent Store and Oplog) for active data. When the SSD tier utilization exceeds recommended thresholds (typically above 75-80%), the system must aggressively destage data to the slower HDD Capacity tier to free up space for incoming writes.

This destaging process and the lack of available SSD space for the active working set (WS) force read and write operations to be served from the slower Capacity tier (HDD), resulting in significantly higher latency and "sluggish" desktop performance. The vCPU ratio (4:1) and Host CPU (< 40%) are well within healthy limits, ruling out CPU contention.

NEW QUESTION # 41

An organization has decided to leverage the Security Configuration Management Automation (SCMA) framework to continuously inspect services for deviations from established security policies. How does Nutanix keep these scans from impacting cluster performance?

- A. SCMA checks are bypassed by STIG.

- B. SCMA has a low system priority.
- C. SCMA is fully managed by Prism Central.
- D. SCMA inconsistencies aren't reverted.

Answer: B

Explanation:

Nutanix leverages the Security Configuration Management Automation (SCMA) framework to ensure that services are constantly inspected for variance to the security policy. This framework checks multiple security entities for both Nutanix storage and AHV, automatically reporting log inconsistencies and reverting them to the baseline where applicable.

To prevent these continuous inspections from negatively affecting the cluster's operation, the Nutanix Security Guide specifies that STIG (Security Technical Implementation Guide) scans have the lowest system priority within the virtual storage controller. This design ensures that security checks do not interfere with platform performance or user workloads, regardless of whether the schedule is set to run hourly, daily, weekly, or monthly.

NEW QUESTION # 42

A Windows IO VM fails to power on With an NVIDIA vCPU profile in ESXi 7. The VM is configured with NVIDIA profile by selecting Shared PCI Device, adding the NVIDIA GRID vCPU device. and selecting the Profile under VM settings.

The following error message is displayed in the vSphere web client:

What should be done to resolve this issue?

- A. Switch the GPU mode to compute mode using gpumodeswitch command.
- B. Switch the GPU mode to graphics mode using gpumodeswitch command.
- C. Change the Graphics mode of the host from Shared to Shared Direct
- D. change the Graphics mode of the host from Shared Direct to Shared.
- E. Change the Graphics mode of the host from Shared to Shared Direct

Answer: B

Explanation:

gpumodeswitch is a command-line tool that is used to switch supported NVIDIA GPUs between compute and graphics mode. Compute mode allows multiple VMs to share a GPU for CUDA workloads. Graphics mode allows a single VM to use a GPU for graphics workloads¹².

NEW QUESTION # 43

.....

Likewise, Web-Based Nutanix NCP-EUC exam questions are supported by all the major browsers like Chrome, Opera, Safari, Firefox, and IE. In the same way, the Web-based Nutanix Certified Professional - End User Computing (NCP-EUC) 6.10 Exam pdf exam requires no special plugin. Lastly, the web-based Nutanix Certified Professional - End User Computing (NCP-EUC) 6.10 Exam (NCP-EUC) practice exam is customizable and requires an active Internet connection.
