People who want to pass the exam have difficulty in choosing the suitable API-936 study materials. They do not know which study materials are suitable for them, and they do not know which the study materials are best. Our company can promise that the API-936 Study Materials from our company are best among global market. As is known to us, the API-936 study materials from our company are the leading practice materials in this dynamic market.

API-936 exam consists of 120 multiple-choice questions, and candidates are given three and a half hours to complete the exam. API-936 Exam is challenging, and candidates are required to have a deep understanding of the subject matter to pass. However, with the right preparation, candidates can increase their chances of success and gain a valuable credential that can help advance their career in the refractory industry.

New Soft API API-936 Simulations & Reliable API-936 Mock Test

Are you satisfied with your present job? Are you satisfied with what you are doing? Do you want to improve yourself? To master some useful skills is helpful to you. Now that you choose to work in the IT industry, you must register IT certification test and get the IT certificate which will help you to upgrade yourself. What's more important, you can prove that you have mastered greater skills. And then, to take API API-936 Exam can help you to express your desire. Don't worry. Exam4PDF will help you to find what you need in the exam and our dumps must help you to obtain API-936 certificate.

API-936 certification program is open to individuals with a minimum of five years of experience in refractory materials installation, inspection, or testing. Candidates must also have a high school diploma or equivalent qualification. Refractory Personnel certification program is designed to provide a benchmark for employers to evaluate the knowledge and skills of their employees in the field of refractory materials.

API Refractory Personnel Sample Questions (Q14-Q19):

NEW QUESTION # 14

Testing to verify that the application equipment and personnel are capable of meeting specified quality standards is called:

- A. as-installed testing.
- B. quality control testing.
- C. material qualification testing.
- D. applicator qualification testing.

Answer: D

Explanation:

Applicator qualification testing is a term used in API 936 to describe the testing required to evaluate whether installation equipment and personnel can achieve the required physical properties (e.g., density, strength) in the final refractory. This testing often involves a mock-up or practice panel where variables like rebound, compaction, and finish are assessed.

The objective is to ensure:

Installation consistency across shifts or crews

Operator competence with specific materials

Adequate equipment settings (nozzles, air pressure, etc.)

Applicator qualification must be completed before production installation begins and is separate from material qualification or final as-installed testing.

Reference:

API Std 936, Section 5.2.2 - "Applicator qualifications shall be demonstrated by pre-installation testing using the proposed equipment and methods." API TR 980 - Sections on "Personnel and Equipment Qualification" and "Field Mock-ups"

NEW QUESTION # 15

Which of the following is a valid acceptance criterion for cold crushing strength of castable used in erosive service?

- A. All individual values must exceed 75% of the manufacturer's minimum published CCS.
- B. The lowest result must exceed 90% of ASTM C401 average for gunned materials.
- C. CCS test values must average within $\pm 10\%$ of the manufacturer's mean value.
- D. CCS must be no less than 80% of the manufacturer's advertised maximum.

Answer: A

Explanation:

API Std 936 defines the acceptance criteria for CCS under erosive service in Section 6.4.2:

"Test values for cold crushing strength shall meet or exceed 75% of the manufacturer's minimum published value for each individual specimen."

- API Std 936, Section 6.4.2

This criterion ensures that all tested samples meet a critical durability threshold before field acceptance.

NEW QUESTION # 16

As per ASTM C- 704, for the erosion tests, silicon carbide grit is to be used by

- A. One time
- B. None of the above

- Answer: A**

Refractory lined pipe used for the transport of hot particulate medium and gases between process vessels is called

- Answer: D**

To compose a sample for the modulus of rupture test from an equivalent number of refractory shapes, the specimen should be

- Answer: C**
