If you find the most suitable CCAS study materials on our website, just add the CCAS actual exam to your shopping cart and pay money for our products. Our online workers will quickly deal with your orders. We will follow the sequence of customers' payment to send you our CCAS Guide questions to study right away with 5 to 10 minutes. It is quite easy and convenient for you to download our CCAS practice engine as well.

ACAMS Certified Cryptoasset Anti-Financial Crime Specialist Examination Sample Questions (Q27-Q32):

NEW QUESTION # 27

A compliance officer Is assigned a group of customers. Which action should the officer fake to determine the appropriate level of

customer due diligence apply to each customer?

- A. Take into account all risk variables such as the purpose of the account or relationship
- B. Assess only the money laundering risks posed by customer location
- C. Implement the same COD measures for each customer.
- D. Examine what Threshold for occasional transactions can be set for each customer.

Answer: A

Explanation:

A risk-based approach to customer due diligence requires considering all relevant risk factors including customer profile, the nature and purpose of the account or relationship, geographic risks, transaction patterns, and other relevant factors. This ensures that CDD intensity is commensurate with assessed risk.

Assessing only location (A) or transaction thresholds (B) is insufficient alone. Applying uniform CDD measures (C) contradicts the risk-based approach advocated by FATF and DFSA regulations.

DFSA AML guidance explicitly requires comprehensive risk assessment considering multiple variables to determine appropriate due diligence levels.

NEW QUESTION # 28

What is "layering" in the context of money laundering using cryptoassets?

- A. Converting crypto into fiat currency
- B. Moving illicit funds through complex transactions to obscure origin
- C. Splitting transactions into smaller amounts to evade reporting thresholds
- D. Freezing illicit accounts

Answer: B

Explanation:

Layering involves creating complex transaction chains to disguise the illicit origin of funds. In crypto, this may involve multiple wallet hops, cross-chain swaps, and the use of privacy-enhancing technologies.

NEW QUESTION # 29

What three classifications of assets does the Markets in Crypto-Assets Regulation (commonly known as MiCA) apply to? (Select Three.)

- A. Privacy coins
- B. Meme coins
- C. Electronic money tokens
- D. Cryptoassets
- E. Asset-referenced tokens

Answer: C,D,E

Explanation:

The EU's Markets in Crypto-Assets Regulation (MiCA) applies specifically to:

Electronic Money Tokens (B): Tokens that fulfill the definition of electronic money under the E-Money Directive.

Cryptoassets (D): Broad category including digital representations of value that are not covered by existing financial services legislation.

Asset-Referenced Tokens (E): Tokens that purport to maintain a stable value by referencing one or several assets.

Meme coins (A) and privacy coins (C) are not separately classified under MiCA but may fall under broader cryptoasset categories subject to other regulations.

NEW QUESTION # 30

If a VASP suspects a transaction involves a sanctioned entity, it must:

- A. Wait for law enforcement confirmation
- B. Cancel the customer account immediately without reporting
