- A. The Universal Print Server is enabled.
- B. All client printers are auto-created.
- C. Direct connections to print servers are prohibited.
- D. The generic universal printer is automatically created.

Answer: B

Explanation:
The default printing behavior when no printing policy is configured is to auto-create all client printers. This option provides users with access to the same printers in a session as they have on their user devices.

Which account is used by FlexCast Management Architecture (FMA) services to access the Citrix Virtual Apps and Desktops SQL databases?

- A. Domain user account
- B. Network Service account
- C. Delivery Controller's machine account
- D. Local System account

Answer: D

Explanation:
The Citrix Virtual Apps and Desktops documentation specifies that the Local Host Cache feature allows connection brokering operations in a site to continue when the connection between a Delivery Controller and the site database fails1.
