- D. ipv6 router 2000::1/128 2012::2
- E. ipv6 router 2000::1/128 2012::1

Answer: A,E

Explanation:

Floating static routes are static routes that have an administrative distance greater than the administrative distance (AD) of another static route or dynamic routes. By default a static route has an AD of 1 then floating static route must have the AD greater than 1. Floating static route has a manually configured administrative distance greater than that of the primary route and therefore would not be in the routing table until the primary route fails.

NEW QUESTION # 1131

What is the primary function of a Layer 3 device?

- A. to transmit wireless traffic between hosts
- B. to analyze traffic and drop unauthorized traffic from the Internet
- C. forward traffic within the same broadcast domain
- **D. to pass traffic between different networks**

Answer: D

Explanation:

to pass traffic between different networks. Wireless operation depends on WLAN identity, AP mode, RF management, client authentication, and controller-based policy enforcement. Cisco CCNA 200-301 v1.1 includes this under Network Fundamentals, where the exam expects engineers to recognize the device behavior that actually produces the required outcome. The question is best solved by reading the operational clue rather than choosing a familiar acronym. The distractors confuse WLAN names, authentication, encryption, RF optimization, and controller management functions. In a production network, the wrong choice would normally create an outage, leave a management or security gap, or send troubleshooting toward the wrong subsystem. The selected answer is the one that matches the control-plane, data-plane, wireless, security, services, or automation mechanism described in the question. That is why it remains the verified answer for this item.

- A. frame flooding
- B. frame pushing
- C. frame filtering
- **D. frame switching**
