1Z0-083 Test Valid, Latest 1Z0-083 Exam Bootcamp

Since our Oracle Database Administration II practice exam tracks your progress and reports results, you can review these results and strengthen your weaker concepts. We offer Oracle 1Z0-083 desktop practice test software which works on Windows computers after installation. The web-based 1Z0-083 practice exam needs no plugins or software installation. Linux, iOS, Android, Windows, and Mac support the web-based Oracle 1Z0-083 Practice Exam. Additionally, Chrome, Opera, Firefox, Safari, Internet Explorer support this Oracle Database Administration II 1Z0-083 web-based practice test.

Oracle Database Administration II Sample Questions (Q280-Q285):

NEW QUESTION # 280

Choose one You want to create a test database as a replica of your production database with minimum intervention from a DBA.

Which method would you use?

- A. Use DBCA to create a template from the existing database to contain the database structure with data files and then use the same template to create the database in the new location.
- B. Create the database by using the CREATE DATABASE . . . command and manually import data by using Data Pump.
- C. Use Database Configuration Assistant (DBCA) to create a template from the existing database to contain the database structure.
- D. Use DBCA to create a template from the existing database to contain the database structure and then manually copy the data by using Oracle Data Pump.

Answer: A

NEW QUESTION # 281

Which two are true about common objects? (Choose two.)

- A. They can exist in CDB\$ROOT and an application root.
- B. They can be created only in an application root.
- C. They can be extended data-linked in CDB\$ROOT.
- D. They can be created only in CDB\$ROOT.
- E. They can exist in user-defined schemas only in application containers.
- F. They can be only metadata-linked in an application container.

Answer: A

NEW QUESTION # 282

Which two are true in Oracle 19c and later releases?

- A. Unified Auditing can be configured to audit only events that are issued indirectly by all users.
- B. All the Oracle-supplied accounts are Schema Only accounts.
- C. Unified Auditing can be configured to audit only events that are issued directly by an audited user.
- D. If the password file location changes, then the instance must be restarted.
- E. Schema Only accounts can be granted administrator privileges.

Answer: C,E

NEW QUESTION # 283

Which two are true about changing the LOCAL_UNDO_ENABLED property to false in a CDB? (Choose two.)

- A. After the change, any user with the required privilege can create an undo tablespace in the PDBs.
- B. After the change, only a common user with the required privilege can create an undo tablespace in CDB\$ROOT.
- C. Any new PDB and existing PDBs are automatically configured to use the default undo tablespace in CDB\$ROOT.
- D. Undo tablespaces existing in PDBs must be dropped before the change.
- E. After the change, each existing PDB has to be reopened for the new undo mode to take effect.
- F. After the change, only one undo tablespace can exist in CDB\$ROOT.

Answer: C,F

Explanation:

Explanation

You can set a CDB in local UNDO mode either at CDB creation or by altering the CDB property. When the database property LOCAL_UNDO_ENABLE is FALSE, which is the default, there is only one UNDO tablespace that is created in the CDB root, and that is shared by all containers. When LOCAL_UNDO_ENABLE is TRUE, every container in the CDB uses local undo and each PDB must have its own local UNDO tablespace. To maintain ease of management and provisioning, UNDO tablespace creation happens automatically and does not require any action from the user. When a PDB is opened and an UNDO tablespace is not available, it is automatically created.

NEW QUESTION # 284

RMAN is connected to the target database prod1 and an auxiliary instance in nomount state.

Examine the command to create a duplicate database:

```
RMAN> DUPLICATE TARGET DATABASE TO dup1
```

FROM ACTIVE DATABASE NOFILENAMECHECK PASSWORD FILE SPFILE;

Which two statements are true about the execution of the duplicate command?

- A. The password file and SPFILE for the duplicate database dup1 are created in their respective default locations.
- B. The duplicate database is created by using the backups created during the execution of
- C. All archive redo log files are automatically copied to the duplicate database.
- D. The duplicate database has the same directory structure as the source database.
- E. he duplicate command.
- F. The duplicate database is created without using RMAN backups and prod1 is allowed to remain open during duplication.

Answer: D,F

NEW QUESTION # 285
