### NEW QUESTION # 239

When deploying BGP/MPLS IPVPN, OSPF's VPN route tag is not present

The extended properties of MP-BGP are passed only locally, only locally, and only meaningful on routers that receive MP-BGP routes and generate OSPF LSAs.

- A. TRUE
- B. FALSE

**Answer: A**

### NEW QUESTION # 240

During the configuration of L3VPNv4 over SRv6 BE, if an RR is deployed in the SR domain, which command must be run on the RR to ensure that the PEs at both ends can correctly learn VPNv4 routes?

On a VXLAN-based virtualized network, if the fabric networking mode is centralized gateway networking, the gateway is located on the \_\_\_\_\_ device. (Capitalize the first letter.)

**Answer:**

Explanation:

SpineIn VXLAN centralized gateway networking, the default gateway (for both intra- and inter-subnet traffic) is placed on the Spine node, which acts as a centralized gateway device. This architecture simplifies routing and enables centralized control for inter-VNI routing. It is often contrasted with distributed gateway mode, where gateways reside on leaf nodes. Huawei Datacom Reference: "In centralized gateway mode, the spine node functions as the gateway and processes both inter-VNI routing and gateway services." (Source: HCIE- Datacom V1.0 Official Training - VXLAN & Fabric Networking Chapter, Section: VXLAN Gateway Deployment Modes) peer retain-route-target all Explanation:

Understanding L3VPNv4 Over SRv6 BE

# What is L3VPNv4?

L3VPNv4 (Layer 3 VPN over IPv4) allows MPLS-based VPN services over an SRv6 backbone.

Uses MP-BGP (Multiprotocol BGP) to distribute VPN routes.

# Why is an RR (Route Reflector) Needed?

An RR simplifies BGP route exchange between multiple PEs (Provider Edge routers).

Without proper configuration, RRs may filter VPNv4 routes, preventing PEs from learning routes correctly.

Why is the Command peer retain-route-target all Needed?

# Ensures that the RR retains all VPNv4 routes.

# Prevents the RR from filtering route targets (RTs), allowing full VPN reachability.

# Without this command, the RR might not reflect all VPNv4 routes, causing connectivity issues.

Real-World Application:

Enterprise MPLS VPNs: Ensures correct BGP route reflection in an SRv6-based L3VPN.

Carrier Networks: Helps service providers maintain full BGP VPN route distribution.
