

Test Analytics-Con-301 Vce Free & Analytics-Con-301 Latest Test Pdf

ANC-301 Valid Test Experience - Exam ANC-301 Vce

If you have your own job and have little time to prepare for the exam, you can choose to ANC-301 exam questions of high quality, and you don't need to spend about 22 hours, you can pass the exam. In addition, ANC-301 exam preparation contains most of knowledge points of the exam, so you can also improve your professional ability in the process of learning. We offer you the voucher for 335 days after you buy ANC-301 EXAM QUESTIONS. This update version will be sent to your email automatically.

As the old saying tells that he who doesn't go ahead will be on ground. So you will have a positive attitude on life. As the old saying tells that he who doesn't go ahead will be on ground. So you will have a positive attitude on life. As the old saying tells that he who doesn't go ahead will be on ground. So you will have a positive attitude on life.

Exam ANC-301 Vce, New ANC-301 Test Preparation

Our ANC-301 preparation practice are highly targeted and have a high hit rate. There are a lot of learning tips and key points in the exam, even if your time is very short, you can also improve your ANC-301 exam skills very quickly. Even if you have a weak foundation, because of that you will get the certification for your ANC-301 EXAM QUESTIONS. We can assure that with our ANC-301 practice single for 23 or 30 days, you will be ready to pass the exam with confidence.

Analytics-Con-301 Latest Test Pdf - Analytics-Con-301 Certification Exam

Facing the incoming Salesforce Analytics-Con-301 Exam, you may feel stained and anxious, suspicious whether you could pass the

exam smoothly and successfully. Actually, you must not impoverish your ambition. Our suggestions are never boggle at difficulties. It is your right time to make your mark.

Salesforce Certified Tableau Consultant Sample Questions (Q13-Q18):

NEW QUESTION # 13

A multi-national company wants to have a Tableau dashboard that will provide country-level information for both its forecast summaries and year-on-year metrics. The company wants to toggle between these two views while leaving main key performance indicators (KPIs) visible on the main dashboard.

Which method is the most efficient in achieving the company's requirements?

- A. Create a dashboard with the sheets containing the main KPIs and the forecast summary worksheet.
 - . Duplicate this dashboard and replace the forecast view worksheet with the year-on-year metrics worksheet.
 - . Add navigation buttons to both dashboards.
- B. Create a parameter that accepts values from a list that contains "Forecast View" and "Year-on-Year View."
 - . Right-click the parameter and select Add to Sheet for both worksheets.
 - . Navigate back to the dashboard and to the upper corner of the two worksheets.
 - . Enable the Use as Filter option.
- C. Create a Boolean parameter with the two names of the views as aliases and a corresponding calculated field with the following calculation: True.
 - . Add the forecast summary sheet to the dashboard and add the year-on-year metrics sheet to the same dashboard as a Floating dashboard object.
 - . Add the calculated fields as a Detail under the Marks card of the floating view, create a "Change Parameter" action, and set the "Target Parameter" and "Source Fields" to the parameter and calculated field you created.
 - . Check the box for "Control visibility using value" in the Layout tab of the floating view and select the parameter you created.
- D. Create a single worksheet with all the measures required for both the forecast summary and the year-on-year views.
 - . Create a Boolean parameter and a corresponding calculated field with the following calculation: True.
 - . Add a blank dashboard object and in the Layout tab, check the box for "Control visibility using value" and select the parameter you created.

Answer: C

Explanation:

The most efficient method for toggling between two views (forecast summaries and year-on-year metrics) while keeping main KPIs visible involves using a parameter and calculated fields for controlling visibility:

- * Create a Boolean Parameter: This parameter will have two aliases representing the two views ("Forecast View" and "Year-on-Year View"). This allows the user to select which view they wish to see directly from the dashboard.
- * Calculated Field: Create a calculated field that always returns True. This field acts as a constant placeholder to enable the visibility control tied to the parameter.
- * Dashboard Setup: Place both the forecast summary and the year-on-year metrics sheets on the dashboard. Set the year-on-year metrics sheet as a floating object over the forecast summary.
- * Visibility Control: Use the "Control visibility using value" option in the Layout tab for the floating year-on-year metrics view. Tie this setting to the Boolean parameter so that changing the parameter will show or hide this view without affecting the main KPIs displayed on the dashboard.
- * Interactivity: Implement a "Change Parameter" dashboard action where selecting different options in the dashboard (e.g., clicking on certain parts) triggers the parameter to change, thus toggling the visible view.

References

This method leverages Tableau's dashboard interactivity features including parameters, calculated fields, and visibility settings, as recommended in Tableau's user guide on dynamic dashboard design.

NEW QUESTION # 14

A client's fiscal calendar runs from February 1 through January 31.

How should the consultant configure Tableau to use the client's fiscal calendar when building date charts?

- A. Edit the data source Date Properties, then update the Default Properties of the Date Fields.
- B. Create Calculated Fields using the FISCALQUARTER() and FISCALYEAR() functions.
- C. Right click on the Date axis in charts and select Use Fiscal Calendar.
- D. Edit the data source and set the Fiscal Year in the data preview window.

Answer: A

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Tableau allows fiscal calendars to be defined at the data source level, affecting how all date fields behave across the workbook.

According to Tableau documentation:

- * Fiscal calendars must be set using Data Source Date Properties.
- * Once set, this becomes a default property for all date fields unless overridden.
- * This allows charts, hierarchies, and date parts to automatically follow the fiscal year starting in February.

Correct procedure:

- * Go to Data Source.
- * Open Date Properties.
- * Set Fiscal Year Start = February.
- * (Optional) Adjust Date Field Default Properties.

This ensures all charts and date hierarchies use the fiscal calendar automatically.

Why the other options are incorrect:

A). Right-click on axis # Use Fiscal Calendar

This option does not exist in Tableau.

B). Set Fiscal Year in Data Preview

Not supported; fiscal configuration isn't made in the preview window.

C). Use FISCALYEAR() / FISCALQUARTER()

This is manual, requires custom fields, and does not configure Tableau's built-in fiscal calendar system.

This is more work and not the correct method.

Only Option D configures the fiscal calendar globally and correctly.

- * Tableau Date Properties documentation specifying fiscal year settings.
- * Default Properties configuration for date fields.
- * Official guidance for implementing fiscal calendars.

NEW QUESTION # 15

A client has a large data set that contains more than 10 million rows.

A consultant wants to calculate a profitability threshold as efficiently as possible. The calculation must classify the profits by using the following specifications:

- . Classify profit margins above 50% as Highly Profitable.
- . Classify profit margins between 0% and 50% as Profitable.
- . Classify profit margins below 0% as Unprofitable.

Which calculation meets these requirements?

- A. IF [ProfitMargin]>0.50 Then 'Highly Profitable'
ELSEIF [ProfitMargin]>=0 Then 'Profitable'
ELSEIF [ProfitMargin] <0 Then 'Unprofitable'
END
- B. IF [ProfitMargin]>=0.50 Then 'Highly Profitable'
ELSEIF [ProfitMargin]>=0 Then 'Profitable'
ELSE 'Unprofitable'
END
- C. IF [ProfitMargin]>0.50 Then 'Highly Profitable'
ELSEIF [ProfitMargin]>=0 Then 'Profitable'
ELSE 'Unprofitable'
END
- D. IF([ProfitMargin]>=0.50,'Highly Profitable', 'Profitable')
ELSE 'Unprofitable'
END

Answer: B

Explanation:

The correct calculation for classifying profit margins into categories based on specified thresholds involves the use of conditional statements that check ranges in a logical order:

Highly Profitable Classification: The first condition checks if the profit margin is 50% or more. This must use the ">=" operator to include exactly 50% as "Highly Profitable".

Profitable Classification: The next condition checks if the profit margin is between 0% and 50%. Since any value falling at or above 50% is already classified, this condition only needs to check for values greater than or equal to 0%.

Unprofitable Classification: The final condition captures any remaining scenarios, which would only be values less than 0%.

References:

Logical Order in Conditional Statements: It is crucial in programming and data calculation to ensure that conditions in IF statements are structured in a logical and non-overlapping manner to accurately categorize all possible values.

NEW QUESTION # 16

A client is using the Tableau Content Migration Tool to move content from an old Tableau Server to a new Tableau Server. Which content will need to be moved using a different tool or process?

- A. Workbooks
- B. Published data sources that use live connections
- C. Published data sources that use extracts
- **D. Tableau Prep flows**

Answer: D

Explanation:

When migrating content between Tableau servers, certain types of content may require special consideration or different tools for migration:

Tableau Prep Flows: These are specific to Tableau Prep and are not included in the standard content migration capabilities of the Tableau Content Migration Tool. Tableau Prep flows often require separate processes for migration due to their distinct setup and integration with data sources and workflows.

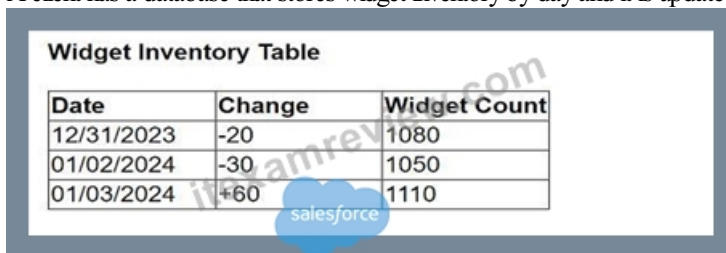

Published Data Sources and Workbooks: These can typically be migrated directly using the Tableau Content Migration Tool, which supports moving published data sources (both live connections and extracts) and workbooks without requiring additional tools.

References:

Tableau Help and Support: Offers comprehensive tutorials and guidelines on using different tools for migrating various types of content, including the specific requirements for migrating Tableau Prep flows which are not covered by the standard content migration tool.

NEW QUESTION # 17

A client has a database that stores widget inventory by day and it is updated on a nonstandard schedule as shown below.

| Date | Change | Widget Count |
|------------|--------|--------------|
| 12/31/2023 | -20 | 1080 |
| 01/02/2024 | -30 | 1050 |
| 01/03/2024 | +60 | 1110 |

They want a data visualization that shows widget inventory daily, however their business unit does not have the ability to modify the data warehouse structure.

What should the client do to achieve the desired result?

- A. Create a temporary table in the database.
- **B. Use Tableau Prep to add new rows.**
- C. Use Tableau Desktop to visualize null values.
- D. Update the Widget Inventory Table to be a daily snapshot.

Answer: B

Explanation:

For a client who needs a daily visualization of widget inventory but cannot modify the data warehouse structure, the best approach is to use Tableau Prep to add new rows. Tableau Prep can be used to manipulate the existing dataset by adding missing date entries and appropriately adjusting inventory counts based on available data. This allows the creation of a complete daily snapshot for visualization without needing changes to the underlying database structure.

NEW QUESTION # 18

.....

You can alter the duration and quantity of Salesforce Analytics-Con-301 questions in these Salesforce Analytics-Con-301 practice exams as per your training needs. For offline practice, our Analytics-Con-301 desktop practice test software is ideal. This Analytics-Con-301 software runs on Windows computers. The Analytics-Con-301 web-based practice exam is compatible with all browsers and operating systems.
