Free PDF CompTIA - 220-1201 - High-quality CompTIA A+ Core 1 Exam (2026) Pass Guide

With the aim of helping aspirants to achieve the CompTIA A+ Core 1 Exam (2026) (220-1201) certification, Exam4Free is committed to providing the best quality and updated CompTIA 220-1201 exam dumps. With their authentic and Real 220-1201

Exam Questions, you can be confident of passing the CompTIA 220-1201 certification exam on the first try.

CompTIA A+ Core 1 Exam (2026) Sample Questions (Q414-Q419):

NEW QUESTION # 414

A support technician receives a call stating that a user has added a device to the network. The user used the same configurations from another workstation. When both workstations are turned on, neither can access the network reliably. Which of the following is the most likely cause of the issue?

- A. The new computer has a duplicate IP address.
- B. The DNS server is registering both hostnames.
- C. The security on the switchport needs to be reset.
- D. The network cable was improperly terminated.

Answer: A

Explanation:

If two devices have the same static IP address, an IP conflict occurs. This results in both devices being intermittently disconnected or unable to communicate on the network. It's a common mistake when copying configurations manually.

Option B: DNS conflicts wouldn't cause total disconnection and wouldn't occur just from copying IP settings.

Option C: A cable issue would only affect one workstation.

Option D: Switchport security issues wouldn't affect both machines simultaneously unless port security was configured very specifically.

CompTIA A+ Core 1 Exam Objective Reference:

Objective 2.6: Given a scenario, configure and troubleshoot network connectivity.

NEW QUESTION # 415

A user returns from a trip and discovers a computer that is connected to the LAN times out intermittently. Upon investigation, a technician finds the RJ45 pin is not properly terminated.

Which of the following networking tools is most appropriate to fix the issue?

- A. Toner probe
- B. Punchdown
- C. Crimper
- D. Cable tester

Answer: C

Explanation:

A crimper is used to terminate an RJ45 cable properly by attaching the connector to the twisted-pair wires.

If the termination is not done correctly, the connection will be intermittent or fail entirely.

NEW QUESTION # 416

A user is unable to access secure applications on their tablet when working from home a couple days per week, but the applications work when in the office. Which of the following services most likely needs to be reconfigured to allow for remote work?

- A. Global Positioning System
- B. Mobile device management
- C. Wi-Fi Protected Access
- D. Near-field communication

Answer: B

Explanation:

Mobile Device Management (MDM) software often controls access to corporate resources based on location, network, or VPN status. If the MDM is not configured to allow access from outside the office or via home networks, the apps may be blocked. This is the most probable cause if apps work only on-premises.

Option A: GPS is used for location services, not access control.

Option C: WPA is a Wi-Fi security protocol, not related to access restrictions.

Option D:NFC enables close-range communication - irrelevant to app access.

CompTIA A+ Core 1 Exam Objective Reference:

Objective 1.6: Given a scenario, configure basic mobile device network connectivity and application support.

NEW QUESTION # 417

The printer in a main office repeatedly jams. Which of the following tasks should a support technician do to solve the issue?

- A. Replace toner or ink cartridges.
- **B. Apply a maintenance kit.**
- C. Install a new ribbon.
- D. Change the printhead.

Answer: B

Explanation:

A maintenance kit includes replacement rollers, separation pads, and fuser components that wear out over time and commonly cause paper jams. Replacing these parts as a group restores proper paper handling and solves recurring jamming issues.

NEW QUESTION # 418

Several storms cause mission-critical servers to go offline unexpectedly. A server also goes offline suddenly due to hardware failure. Upon assessment, the company purchases new UPSs to condition power and allow the OSs to shut down gracefully in the event of a power failure. However, the UPSs are delayed due to supply chain issues.

Which of the following can balance a cost-effective solution with uptime requirements?

- A. Purchasing backup generators
- B. Activating a hot site
- **C. Installing redundant PSUs**
- D. Increasing input voltage

Answer: C

Explanation:

Redundant PSUs provide fault tolerance by ensuring that if one power supply fails, another will take over seamlessly.

This is a cost-effective way to increase uptime while waiting for the UPSs to arrive.

NEW QUESTION # 419

.....

Our 220-1201 exam materials are the product of this era, which conforms to the development trend of the whole era. It seems that we have been in a state of study and examination since we can remember, and we have experienced countless tests. In the process of job hunting, we are always asked what are the achievements and what certificates have we obtained? Therefore, we get the test 220-1201 Certification and obtain the qualification certificate to become a quantitative standard, and our 220-1201 learning guide can help you to prove yourself the fastest in a very short period of time.
