Peoplecert ITIL Foundation (Version 5) Sample Questions (Q47-Q52):

NEW QUESTION # 47

Which practice has the purpose of ensuring that the organization's suppliers and their performance are managed appropriately to support the provision of seamless, quality products and services?

- A. Service management
- B. Release management
- C. **Supplier management**
- D. Relationship management

Answer: C

NEW QUESTION # 48

Which dimension of digital product and service management ensures whoever is working in an organization has sufficient skills to support anticipated needs?

- A. Value streams and processes
- B. **Organizations and people**
- C. Partners and suppliers
- D. Information and technology

Answer: B

Explanation:

The organizations and people dimension ensures that individuals within the organization have the appropriate skills, competencies, roles, and structure to meet current and anticipated needs in delivering products and services.

NEW QUESTION # 49

What is the MAIN purpose of using feedback throughout improvement iterations?

- A. To ensure that improvement actions remain relevant and effective in changing circumstances
- B. To confirm that all stakeholder opinions are in agreement
- C. To avoid changes in project priorities during implementation
- D. To prevent the need for further adjustments once work has started

Answer: A

Explanation:

The main purpose of feedback during improvement iterations is to ensure that actions remain relevant and effective as circumstances change, so option B is correct. ITIL promotes iterative progress because environments, stakeholder needs, risks, and information often change during work. Feedback helps teams learn what is working, what is not, and what should be adjusted before moving further. It is not realistic to expect all stakeholders to fully agree at every point, and feedback does not eliminate the need for future adjustments. Instead, it supports better decisions, earlier correction, and more effective alignment with value. This approach reduces waste and improves adaptability. It is closely connected to the guiding principle "progress iteratively with feedback," which encourages organizations to move in manageable steps and use learning continuously to refine outcomes.

NEW QUESTION # 50

Which BEST describes the relationship between digital services and digital products?

- A. Digital services and digital products exist independently
- B. Digital products are always based on digital services
- C. Digital services are always based on digital products
- D. Digital products are service actions performed by providers

Answer: C

Explanation:

Digital services are always based on digital products, so option B is correct. In ITIL, a digital product is a combination of an organization's resources based on digital technology and designed to offer value to consumers. A digital service uses those digital products to facilitate outcomes and support value co-creation. This means the product forms the technological and resource foundation for the service. The relationship does not work the other way around, so digital products are not based on digital services. They also do not exist independently in the context of digital service management, because products and services are integrated through the lifecycle and value system. Finally, digital products are not service actions. Service actions are provider activities, while products are configurations of resources. Therefore, digital services depend on digital products.

NEW QUESTION # 51

How should the seven guiding principles be combined when an organization is making a decision?

- A. By using all the guiding principles equally when making any decision
- B. By using the 'keep it simple and practical' principle and one or two others that are relevant to the specific decision
- C. By selecting one guiding principle to follow as the main basis for every decision
- D. By considering each guiding principle to understand its relevance before applying it

Answer: D

Explanation:

The guiding principles should each be considered to determine their relevance to the specific context and decision, as they are universal recommendations that may apply differently depending on the situation.
