A FortiSASE administrator has configured FortiSASE as a spoke to a FortiGate hub. The tunnel is up to the FortiGate hub. However, the remote FortiClient is not able to access the web server hosted behind the FortiGate hub. Based on the exhibits, what is the reason for the access failure?

- A. A private access policy has denied the traffic because of failed compliance
- **B. The hub firewall policy does not include the FortiClient address range.**
- C. The server subnet BGP route was not received on FortiSASE.
- D. The hub is not advertising the required routes.

Answer: B

NEW QUESTION # 32

What are two advantages of using zero-trust tags? (Choose two.)

- A. Zero-trust tags can be assigned to endpoint profiles based on user groups.

- B. Zero-trust tags can be used to allow or deny access to network resources.
- C. Zero-trust tags can help monitor endpoint system resource usage.
- D. Zero-trust tags can determine the security posture of an endpoint.

Answer: B,D

Explanation:

Zero-trust tags assess endpoint compliance based on defined posture rules and are used in access policies to control whether a device is permitted or denied access to specific network resources.

NEW QUESTION # 33

Refer to the exhibit.

In the user connection monitor, the FortiSASE administrator notices the user name is showing random characters. Which configuration change must the administrator make to get proper user information?

- A. Configure the username using FortiSASE naming convention.
- B. Turn off log anonymization on FortiSASE.
- C. Add more endpoint licenses on FortiSASE.
- D. Change the deployment type from SWG to VPN.

Answer: B

Explanation:

In the user connection monitor, the random characters shown for the username indicate that log anonymization is enabled. Log anonymization is a feature that hides the actual user information in the logs for privacy and security reasons. To display proper user information, you need to disable log anonymization.

Log Anonymization:

When log anonymization is turned on, the actual usernames are replaced with random characters to protect user privacy.

This feature can be beneficial in certain environments but can cause issues when detailed user monitoring is required.

Disabling Log Anonymization:

Navigate to the FortiSASE settings.

Locate the log settings section.

Disable the log anonymization feature to ensure that actual usernames are displayed in the logs and user connection monitors.

FortiSASE 23.2 Documentation: Provides detailed steps on enabling and disabling log anonymization.

Fortinet Knowledge Base: Explains the impact of log anonymization on user monitoring and logging.
