You have been asked to recommend a solution for protocol capture of 802.11 frames consisting of 3x3:3 802.11ac communications. The requirement specifies that you gain a general view of a coverage area and does not require that you capture from specific user locations. The solution must be the least expensive practical solution possible that does not disrupt user access to the WLAN and it must be based on enterprise WLAN hardware.

What solution would you recommend so that any coverage area could be monitored on demand?

- A. Install the minimum number of Aps required for coverage and use these Aps for protocol analysis as needed
- B. Install laptop-based protocol analyzer near each AP
- C. Install Wireshark on the Aps natively to allow dynamic capture while serving clients

Answer: C

NEW QUESTION # 53

You are using a laptop-based protocol analyzer to scan all channels and determine the basic configuration of the WLAN Basic Service Set in your facility. You are scanning all channels. All configured with default settings.

What can you change to cause the scan to run faster while still APs are capturing beacon frames on all the channels?

- A. Configure the fragmentation threshold to 1500 bytes
- B. Configure the scan time for channels to 300-500 ms
- C. Configure the RBW to more than 120 kHz

NEW QUESTION # 54

You are troubleshooting problems with DHCP in relation to lightweight APs. They vendor class identifier (VCI) is not specified in the DHCP server. When you contact vendor support, they inform you that it is not necessary.

When is this information true?

- A. When only one AP exists on the subnet
- B. When only one client option 43 value is required
- C. When only one client option 60 value is required
- D. When the DHCP server is directly connected to the subnet

Answer: B

Explanation:

The DHCP server should be configured to provide the IP address information to the APs, but it may also be required to pass information for option 43.
