- A. Above Layer 4
- B. Layer 3
- C. Below Layer 3

- D. Layer 2

**NEW QUESTION # 30**

What does the value of the Listen Interval field in an Association request frame indicate?

- A. How often a STA will go off channel to look for other BSSs
- **B. How often a STA in power save mode wakes up to listen to Beacon frames**
- C. How long a STA performing active scanning will listen for Probe Responses before changing channels
- D. How long a STA waits for an Ack before retransmitting the frame

**Answer: B**

Explanation:

The value of the Listen Interval field in an Association Request frame indicates how often a STA in power save mode wakes up to listen to Beacon frames. The Listen Interval is expressed in units of Beacon Intervals (typically 100 TU or 102.4 ms). For example, if the Listen Interval is set to 10, it means that the STA will wake up every 10 Beacon Intervals (or about 1 second) to check for buffered frames at the AP. The Listen Interval is used by the AP to determine how long it can hold frames for a STA in power save mode before discarding them
