Professional Sample Questions (Q28-Q33):

NEW QUESTION # 28

You are in the process of setting up a constraint that prohibits update to an extensible flexfield in a fulfillment line if Ship From Warehouse is X and the fulfillment line is booked. You are able to see the extensible flexfield on the "Manage Constraint Entities" page but not on the "Manage Processing Constraints" page.

What could be the reason?

- A. The "Publish extensible flexfield" process was not run.
- B. A "Record Set" needs to be created for the extensible flexfield to be visible on the "Manage Processing Constraints" page.
- C. The "generate packages" program was not submitted.
- D. The extensible flexfield is not enabled.

Answer: B

Explanation:

A record set is a group of records that are bound by common attribute values for the purpose of constraint evaluation. You can define conditions and specify a record set to be validated for a given condition as defined by the validation template.

NEW QUESTION # 29

Your customer wants to use Oracle Integration Cloud Service with Order Management to communicate business events. Select the option that shows the correct order in which the steps should be executed.

- A. You cannot use Oracle Integration Cloud service with Order Management to communicate business events.
- B. Manage business event trigger points, create a connection, create an integration, and track business events.
- C. Manage business event trigger points, create an integration, create a connection, and track business events.
- D. Track business events, manage business event trigger points, and create an integration.
- E. Create an integration, create a connection, and track business events.

Answer: B

NEW QUESTION # 30

Which three attributes in the orchestration process definition utilize Oracle business rules to make runtime decisions for process behavior? (Choose three.)

- A. Cost of Change
- B. Evaluation Sequence
- C. Start After conditions
- D. Exit Criteria
- E. Line Selection Criteria

Answer: C,D,E

Explanation:

NEW QUESTION # 31

What is the configuration required to automatically calculate the Jeopardy Score and priority when an orchestration process is planned or re-planned?

- A. Check the change mode parameter to Advanced on the orchestration process.
- B. Check the Replan Instantly parameter in the orchestration process.
- C. Schedule the process refresh and start the order promising server.
- D. Schedule the process plan orchestration processes.

Answer: B

Explanation:

You can enable the Replan Instantly feature when you define an orchestration process. It replans the orchestration process immediately after this process completes the orchestration process step, and then displays the revised order data according to the replanning work that it does. It is recommended that you use Replan Instantly only for high priority sales orders, or with sales orders that include a jeopardy threshold of less than one day. For performance reasons, it is recommended that you do not use it with an orchestration process step that is long or complex. If Replan Instantly does not contain a check mark, then Order Management updates the planning data only during the scheduled replanning.

NEW QUESTION # 32

The customer service representative in your company has received a request from a customer for appending additional quantity to an original sales order that has already been released to the warehouse. The sales order quantity revision has resulted in a new shipment line with the status "Ready to Release." What action would you take to ship the new line by merging it with the original shipment?

- A. Run the process Create Shipments with the parameter Append Shipment set to Yes.
- **B. Manually append the new line to the shipment.**
- C. Run the process Create Shipments with the parameter Create Shipment set to Yes.
- D. Perform Pick Release by selecting the Append Shipment check box.
