

# Avail Efficient Exam IDP Bootcamp to Pass IDP on the First Attempt

As you know, today's society is changing very fast. We also need new knowledge to fill in as we learn. And our IDP learning prep can suit you most in this need for you will get the according certification as well as the latest information. IDP Exam simulation is selected by many experts and constantly supplements and adjust our questions and answers. When you use our IDP study materials, you can find the information you need at any time.

## CrowdStrike IDP Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> <li>Zero Trust Architecture: Covers NIST SP 800-207 framework, Zero Trust principles, Falcon's implementation, differences from traditional security models, use cases, and Zero Trust Assessment score calculation.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>Multifactor Authentication (MFA) and Identity-as-a-service (IDaaS) Configuration Basics: Focuses on accessing and configuring MFA and IDaaS connectors, configuration fields, and enabling third-party MFA integration.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>Identity Protection Tenets: Examines Falcon Identity Protection's architecture, domain traffic inspection, EDR complementation, human vulnerability protection, log-free detections, and identity-based attack mitigation.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>GraphQL API: Covers Identity API documentation, creating API keys, permission levels, pivoting from Threat Hunter to GraphQL, and building queries.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>Falcon Identity Protection Fundamentals: Introduces the four menu categories (monitor, enforce, explore, configure), subscription differences between ITD and ITP, user roles, permissions, and threat mitigation capabilities.</li> </ul>
Topic 6	<ul style="list-style-type: none"> <li>Risk Assessment: Covers entity risk categorization, risk and event analysis dashboards, filtering, user risk reduction, custom insights versus reports, and export scheduling.</li> </ul>
Topic 7	<ul style="list-style-type: none"> <li>User Assessment: Examines user attributes, differences between users</li> <li>endpoints</li> <li>entities, risk baselining, risky account types, elevated privileges, watchlists, and honeytoken accounts.</li> </ul>

## High Pass Rate IDP Exam Questions to Pass IDP Exam

If you want to get IDP certification, you may need to spend a lot of time and energy. With our IDP study materials, you can save a lot of time and effort. We know that you must have a lot of other things to do, and our IDP learning guide will relieve your concerns in some ways. We can claim that if you study with our IDP practice engine for 20 to 30 hours, you will be confident to pass the exam by the first attempt.

### CrowdStrike Certified Identity Specialist(CCIS) Exam Sample Questions (Q22-Q27):

#### NEW QUESTION # 22

Can a specific detection be excluded altogether or just per entity?

- A. Adding an exclusion for a detection creates a security hole, therefore a detection cannot be excluded
- B. Only specific entities can be excluded by using the Identity-Based Detection # Detection Exclusion page
- C. All detections can be disabled, some detections support excluding entities
- D. Only detections can be disabled using the Identity-Based Detection # Detection Exclusion page

**Answer: C**

Explanation:

Falcon Identity Protection provides flexible control over how identity-based detections are handled through the Detection Exclusions framework. According to the CCIS curriculum, administrators can either disable an entire detection type or, where supported, exclude specific entities such as users, service accounts, or endpoints from triggering that detection.

Not all detections support entity-level exclusions. For detections that do, exclusions allow organizations to suppress known benign behavior without disabling the detection globally. This is particularly useful for service accounts or legacy systems that generate expected but non-malicious activity. When entity-level exclusion is not supported, administrators may choose to disable the detection entirely, which stops it from generating alerts across the environment.

The CCIS documentation clearly explains this dual model:

- \* All detections can be disabled, regardless of type
- \* Only some detections support entity-based exclusions

This approach balances operational flexibility with security integrity and avoids the misconception that exclusions automatically create security gaps. Therefore, Option C is the correct and verified answer.

#### NEW QUESTION # 23

Which of the following IDaaS connectors will allow Identity to ingest cloud activity along with applying SSO Policy?

- A. ADFS
- B. Okta SSO
- C. SAML
- D. Azure NPS

**Answer: B**

Explanation:

Falcon Identity Protection integrates with Identity-as-a-Service (IDaaS) providers to ingest cloud authentication activity and enforce identity-based policies. According to the CCIS curriculum, Okta SSO is a supported IDaaS connector that enables Falcon to ingest cloud authentication events while also applying Single Sign-On (SSO) policies.

Okta SSO provides rich identity telemetry, including login attempts, device context, and authentication outcomes. This data allows Falcon Identity Protection to correlate on-premises and cloud-based identity activity, extending identity risk analysis beyond Active Directory.

The other options are incorrect:

- \* ADFS is an on-premises federation service, not a cloud IDaaS.
- \* Azure NPS is used for RADIUS-based MFA, not SSO ingestion.
- \* SAML is a protocol, not an IDaaS connector.

Because Okta SSO provides both cloud activity ingestion and SSO enforcement, Option B is the correct and verified answer.

#### NEW QUESTION # 24

Under which CrowdStrike documentation category could you find Identity Protection API information?

- **A. CrowdStrike APIs**
- B. Falcon Management
- C. CrowdStrike Store
- D. Tools and Reference

**Answer: A**

Explanation:

Identity Protection API documentation is part of CrowdStrike's centralized API documentation structure. According to the CCIS curriculum, Identity Protection API information is located under the "CrowdStrike APIs" documentation category.

This category includes:

- \* API authentication and scopes
- \* Identity Protection GraphQL schemas
- \* Query examples for detections, incidents, users, and risk
- \* Usage guidance and limitations

CrowdStrike consolidates all API-related documentation in one location to ensure consistent access and maintenance across Falcon modules. Identity Protection APIs are not documented under Falcon Management, Store, or general reference sections. Because all product APIs-including Identity Protection-are documented under CrowdStrike APIs, Option D is the correct and verified answer.

#### NEW QUESTION # 25

Where in the Identity Protection module can one view the monitoring status of domain controllers?

- A. Settings
- B. System Notifications
- **C. Domains**
- D. Connectors

**Answer: C**

Explanation:

In Falcon Identity Protection, the Domains page is where administrators can view the monitoring and health status of domain controllers. The CCIS curriculum explains that this page provides visibility into which domain controllers are actively reporting authentication traffic, their inspection status, and whether Authentication Traffic Inspection (ATI) is enabled.

This view is essential for validating coverage and ensuring that Falcon Identity Protection has sufficient visibility into domain authentication activity. Administrators can quickly identify gaps, such as domain controllers that are not reporting or are misconfigured, and take corrective action.

The other options serve different purposes:

- \* Settings manage general configuration.
- \* System Notifications display alerts and messages.
- \* Connectors manage integrations such as MFA and IDaaS.

Because domain controller visibility and monitoring health are managed at the domain level, Option C (Domains) is the correct and verified answer.

#### NEW QUESTION # 26

Which of the following users would most likely have a HIGH risk score?

- A. User that recently logged in from a shared endpoint
- **B. Privileged user with a Compromised Password**
- C. User that has not logged in recently and is marked as Stale
- D. User that is a member of the Domain Admins group

**Answer: B**

Explanation:

Falcon Identity Protection calculates user risk scores based on a combination of privilege level, credential exposure, and behavioral

indicators. According to the CCIS curriculum, a privileged user with a compromised password represents one of the highest-risk identity scenarios.

Privileged accounts—such as administrators or service accounts with elevated access—already pose increased risk due to their access scope. When Falcon detects that such an account's credentials have been compromised, the risk escalates significantly because attackers can immediately gain high-impact access without further escalation.

The other options do not inherently represent the same level of risk:

- \* Logging in from a shared endpoint may increase risk but is context-dependent.
- \* Stale users are risky but typically lower risk than active compromised credentials.
- \* Domain Admin group membership alone does not imply compromise.

Because credential compromise combined with privileged dramatically increases attack potential, Option B is the correct and verified answer.

## NEW QUESTION # 27

.....

Our IDP practice engine boosts high quality and we provide the wonderful service to the client. We boost the top-ranking expert team which compiles our IDP guide prep elaborately and check whether there is the update every day and if there is the update the system will send the update automatically to the client. The content of our IDP Preparation questions is easy to be mastered and seizes the focus to use the least amount of answers and questions to convey the most important information.
