

# New NSE6\_EDR\_AD-7.0 Dumps Ppt | Reliable NSE6\_EDR\_AD-7.0 Exam Online

Thus, it leads to making your practice quite convenient. Fortinet NSE6\_EDR\_AD-7.0 desktop software functions on Windows-based computers and works without a functional internet connection. Fortinet NSE6\_EDR\_AD-7.0 Exam Questions always provide ease to their consumers. therefore, the committed team is present around the clock to fix any problem.

Passing an exam for most candidates may be not very easy, our NSE6\_EDR\_AD-7.0 Exam Materials are trying to make the make the difficult things become easier. With the experienced experts to revise the NSE6\_EDR\_AD-7.0 exam dump, and the professionals to check timely, the versions update is quietly fast. Thinking that if you got the certificate, you can get a higher salary, and you're your position in the company will also in a higher level.

## Maximize Your Success with RealVCE Customizable Fortinet NSE6\_EDR\_AD-7.0 Exam Questions

Knowledge is defined as intangible asset that can offer valuable reward in future, so never give up on it and our NSE6\_EDR\_AD-7.0 exam preparation can offer enough knowledge to cope with the exam effectively. To satisfy the needs of exam candidates, our experts wrote our NSE6\_EDR\_AD-7.0 practice materials with perfect arrangement and scientific compilation of messages, so you do not need to study other numerous materials to find the perfect one anymore. Our NSE6\_EDR\_AD-7.0 Exam Quiz will offer you the best help. And our NSE6\_EDR\_AD-7.0 training material will never let you down.

## Fortinet NSE 6 - FortiEDR 7.0 Administrator Sample Questions (Q11-Q16):

### NEW QUESTION # 11

What specific action does FortiEDR take when the Zero Trust Device Tagging playbook is activated?  
(Choose one answer)

- A. It updates FortiClient EMS through an API and assigns a classification fabric tag.
- B. It removes unmanaged endpoints from FortiClient EMS.
- C. It assigns a default tag to all endpoints.
- D. It disables the endpoint until a tag is assigned.

**Answer: A**

Explanation:

The correct answer is C.

The FortiEDR 7.0.0 Administration Guide explains that Identity Management integration can use FortiClient EMS. The connector requires API credentials or FortiCloud credentials depending on whether FortiClient EMS is on-premises or cloud-based. The guide states that for the out-of-the-box action, such as Zero Trust device tagging on FortiClient EMS, FortiEDR tags the device as non-trusted in the identity management system and specifies the classification tag to apply in the Tag name field.

The guide also lists predefined FortiClient EMS 7.2 or later fabric tags used by FortiEDR, including FortiEDR\_Malicious,

FortiEDR\_PUP, FortiEDR\_Suspicious, FortiEDR\_Likely\_Safe, and FortiEDR\_Probably\_Good. These tags are used by FortiClient EMS to tag the endpoint based on FortiEDR classification.

Finally, the guide states that to configure the automated response, the administrator must go to Security Settings > Playbooks, open the relevant Playbook policy, and place a checkmark in the relevant classification column next to the Zero Trust device tagging row under Remediation. FortiEDR is then configured to automatically tag a device as non-trusted when a security event is triggered.

Options A, B, and D are wrong. FortiEDR does not remove unmanaged endpoints, does not apply a default tag to every endpoint, and does not disable the endpoint merely until a tag is assigned. The action is API- based FortiClient EMS tagging tied to FortiEDR event classification

#### NEW QUESTION # 12

Within the FortiEDR architecture, which component needs JumpBox capabilities to enable authenticated and controlled communication with FortiAnalyzer? (Choose one answer)

- A. Core
- B. Central manager
- C. Aggregator
- D. Reputation Server

**Answer: A**

Explanation:

The correct answer is A. Core.

For FortiAnalyzer / FortiAnalyzer Cloud integration, the FortiEDR 7.0.0 Administration Guide states that one prerequisite is "A Jumpbox with connectivity to FortiAnalyzer." The same section says to refer to Setting up the FortiEDR Core for details about installing a FortiEDR Core and configuring it as a Jumpbox. In the connector configuration, the guide also states that the Jumpbox field is used to select the FortiEDR Jumpbox that will communicate with FortiAnalyzer or FortiAnalyzer Cloud.

So, the FortiEDR component associated with JumpBox capability is the Core. The Central Manager must have connectivity to Fortinet Cloud Services, but it is not the component configured as the JumpBox. The Aggregator handles registration, configuration, and monitoring between Collectors/Cores and Central Manager, and the Reputation Server is unrelated to FortiAnalyzer JumpBox communication in this context.

#### NEW QUESTION # 13

You added three new applications to FortiEDR using only the Path attribute. What are two expected outcomes of this configuration? (Choose two answers)

- A. These applications will be disabled until explicitly enabled.
- B. All instances of these applications will be blocked, regardless of location.
- C. Only applications in the specified directory paths will be blocked.
- D. These applications will be blocked only if the file name also matches.

**Answer: A,C**

Explanation:

The correct answers are A and B .

The FortiEDR 7.0.0 Administration Guide states that newly added applications are disabled by default , which means they are not blocked unless enabled. The guide further explains that the default state can be changed by enabling the Enable Default application state option in the Application Control Manager settings. Therefore, option A is correct.

Option B is also correct because Application Control allows an application to be defined by Hash or by any combination of File Name / Path/ Signer . The guide says that the Path field specifies the path to the executable file of the application to be blocked. When using path-based matching, the enforcement is tied to the specified path criteria, not to every possible location of the same file.

Option C is wrong because the file name does not also need to match when only the Path attribute is used.

Option D is wrong because blocking all instances regardless of location applies when only the File Name field is used, not when the match is path-specific. The guide explicitly states that if only the File Name field is filled, the application is blocked no matter where the executable appears.

#### NEW QUESTION # 14

Which two Python commands are supported when using FortiEDR Connect to directly access a protected device shell? (Choose two answers)

- A. %psexec
- B. %upload\_file
- C. %ipconfig\_all
- D. %timestamp

**Answer: B,C**

Explanation:

The correct answers are A. %upload\_file and B. %ipconfig\_all .

The FortiEDR 7.0.0 Administration Guide states that FortiEDR Connect opens a console that provides direct access to a FortiEDR-protected device through a remote shell connection. This allows administrators to respond to incidents, run commands and scripts, collect and download forensic data, and remediate threats.

The guide also states that the FortiEDR Connect terminal has a prompt where commands can be typed, and the Help button displays the supported commands and their parameters.

The guide further confirms that FortiEDR Connect supports FortiEDR-specific commands, Windows command-line access through %cmd , and Python commands.

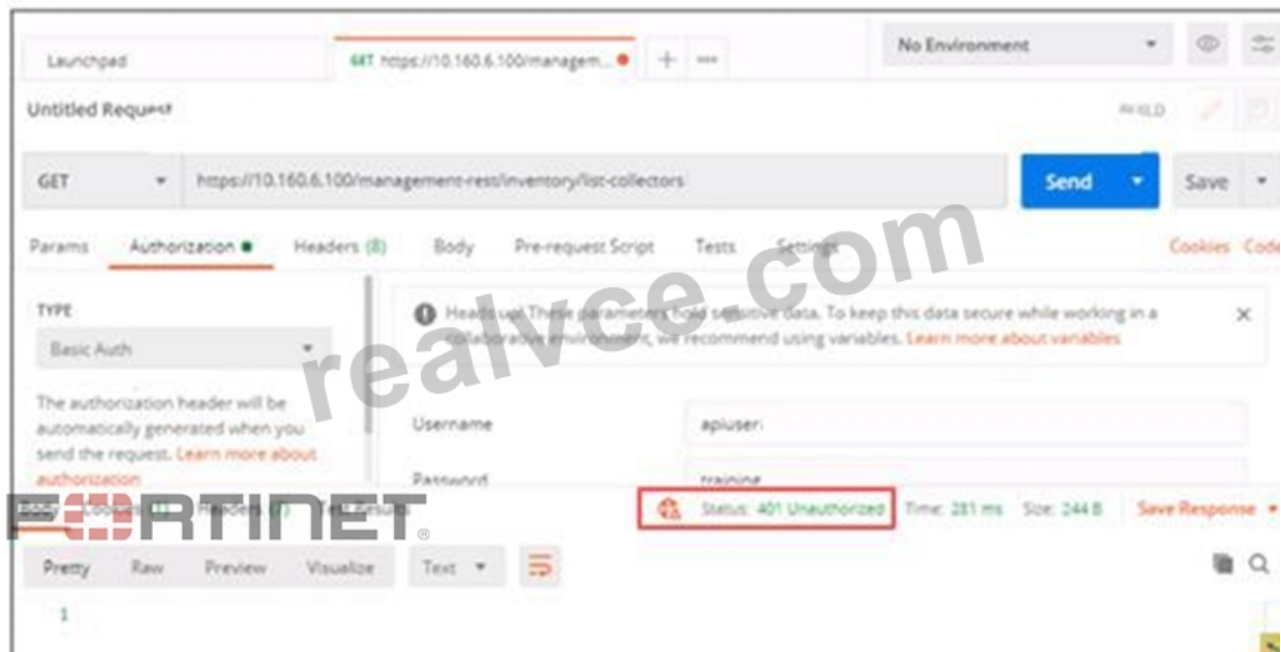

For the exact command list, Fortinet's official FortiEDR Connect technical tip lists the supported commands.

In that list, %ipconfig\_all is explicitly described as returning extended IP information, and %upload\_file is explicitly described as uploading a file to the specified path. ( Fortinet Community ) Options C. %psexec and D. %timestamp are not listed as supported FortiEDR Connect commands in the official Fortinet command list. Therefore, they must not be selected.

## NEW QUESTION # 15

Refer to Exhibit.

**Postman output**

Based on the Postman output shown in the exhibit, why is the user receiving an unauthorized error? (Choose one answer)

- A. API access is disabled on the central manager.
- B. The user account does not have the REST API role assigned.
- C. The central manager is rejecting the request because of an unsupported HTTP method.
- D. FortiEDR requires a password reset the first time a user logs in.

**Answer: B**

Explanation:

The correct answer is C. The user account does not have the REST API role assigned .

The exhibit shows a Postman request to the FortiEDR Central Manager REST endpoint:

/management-rest/inventory/list-collectors

The response is 401 Unauthorized , which means the request reached the FortiEDR API endpoint but the supplied user credentials are not authorized for REST API access.

The FortiEDR 7.0.0 Administration Guide states that when adding or editing a user, the Rest API advanced option controls whether the user is allowed to access the FortiEDR Central Manager through API calls. The guide defines this option as: "Rest API - Specifies whether to allow the user to access the FortiEDR Central Manager through API calls." Therefore, the most accurate cause is that the account being used in Postman does not have the Rest API permission enabled.

Option A is incorrect because the request uses GET against a list endpoint, and an unsupported method would not normally be represented by this user-authentication failure. Option B is not supported by the exhibit or guide wording; the guide describes enabling REST API access per user. Option D is incorrect because first- login password reset is not the direct cause of this REST API authorization failure. The guide separately discusses password reset and password policy behavior, but that is not what the API error indicates.

## NEW QUESTION # 16

.....

Most people now like to practice NSE6\_EDR\_AD-7.0 study braindumps on computer or phone, but I believe there are nostalgic people like me who love paper books. The PDF version of our NSE6\_EDR\_AD-7.0 actual exam supports printing. This PDF version also supports mobile phone scanning, so that you can make full use of fragmented time whenever and wherever possible. And the PDF version of our NSE6\_EDR\_AD-7.0 learning guide can let you free from the constraints of the network, so that you can do exercises whenever you want.
