## 156-215.82 Well Prep | New 156-215.82 Exam Book

In case there are any changes happened to the 156-215.82 exam, the experts keep close eyes on trends of it and compile new updates constantly so that our 156-215.82 exam questions always contain the latest information. It means we will provide the new updates of our 156-215.82 Study Materials freely for you later since you can enjoy free updates for one year after purchase. And you can free download the demos to check it by yourself.

## CheckPoint Check Point Certified Security Administrator - R82 Sample Questions (Q261-Q266):

### NEW QUESTION # 261

What is the main difference between Static NAT and Hide NAT?

- A. Static NAT only allows incoming connections to protect your network.
- B. Hide NAT only allows incoming connections to protect your network.
- **C. Static NAT allow incoming and outgoing connections. Hide NAT only allows outgoing connections.**
- D. Static NAT only allows outgoing connections. Hide NAT allows incoming and outgoing connections.

**Answer: C**

Explanation:

The main difference between Static NAT and Hide NAT is that Static NAT allows incoming and outgoing connections, while Hide NAT only allows outgoing connections. Static NAT translates a single IP address to another single IP address, while Hide NAT translates a group of IP addresses to a single IP address. Static NAT is used to expose internal servers to external networks, while Hide NAT is used to hide internal hosts from external networks. Check Point R81 Firewall Administration Guide

### NEW QUESTION # 262

Rugged appliances are small appliances with ruggedized hardware and like Quantum Spark appliance they use which operating system?

- A. Red Hat Enterprise Linux version 5
- B. Centos Linux
- C. Gaia embedded
- D. Gaia

**Answer: C**

Explanation:

Rugged appliances are small appliances with ruggedized hardware and like Quantum Spark appliance they use Gaia embedded as the operating system. Gaia embedded is a lightweight version of Gaia that is designed for small and medium businesses. Centos Linux, Gaia, and Red Hat Enterprise Linux version 5 are not the operating systems used by Rugged appliances.

### NEW QUESTION # 263

Session unique identifiers are passed to the web api using which http header option?

- A. Proxy-Authorization
- B. Accept-Charset
- C. X-chkp-sid
- D. Application

**Answer: C**

Explanation:

The correct answer is C because session unique identifiers are passed to the web api using the X-chkp-sid http header option. The X-chkp-sid header is used to authenticate and authorize API calls. The other options are not related to session unique identifiers. Check Point R81 Security Management Administration Guide

### NEW QUESTION # 264

Which of the following is NOT a component of a Distinguished Name?

- A. User container
- B. Organizational Unit
- C. Country
- D. Common Name

**Answer: A**

Explanation:

A Distinguished Name (DN) is a unique identifier for an entry in an LDAP directory. A DN consists of a sequence of relative distinguished names (RDNs) separated by commas. Each RDN is composed of an attribute type and an attribute value, such as cn=John Smith or ou=Sales. A DN can have different components depending on the structure and schema of the LDAP directory, but some common components are: Common Name (cn), Country, Organizational Unit (ou), Organization (o), State or Province (st), and Locality (l). User container is not a component of a DN. Check Point R81 Identity Awareness Administration Guide

### NEW QUESTION # 265

What is the difference between SSL VPN and IPSec VPN?

- A. SSL VPN and IPSec VPN are the same
- B. IPSec VPN requires installation of a resident VPN client and SSL VPN requires only an installed Browser
- C. SSL VPN requires installation of a resident VPN client
- D. IPSec VPN does not require installation of a resident VPN client

**Answer: B**

Explanation:

The difference between SSL VPN and IPSec VPN is that IPSec VPN requires installation of a resident VPN client and SSL VPN requires only an installed browser. IPSec VPN uses a pre-shared key or certificates to authenticate the endpoints and encrypts the data at the network layer. SSL VPN uses SSL/TLS protocols to authenticate the endpoints and encrypts the data at the application layer.
