SAP C_DBADM_2601題庫 - C_DBADM_2601題庫分享

KaoGuTi是專門給全世界的IT認證的考生提供培訓資料的，購買我們所有的資料能保證考生一次性通過C_DBADM_2601 考試，讓考生信心百倍的通過 C_DBADM_2601 考試認證，給自己的職業生涯帶來重大影響，用自己專業的頭腦和豐富的考試經驗來滿足考生們的需求。本題庫網用超低的價格和高品質的 SAP C_DBADM_2601 考古題真試題和答案來奉獻給廣大考生。

最新的 SAP Certification Exams C_DBADM_2601 免費考試真題 (Q106-Q111):

問題 #106

CHALLENGE 1 - UAT Configuration Evidence Reconciliation

The upgraded reporting system and the newly installed UAT database both pass connection checks. The upgraded system's configuration value exists in a release note, while the UAT database value exists in the administration record. Which validation sequence is most appropriate?

- A. Confirm active states, reconcile administration records, then accept comparison evidence.
- B. Use the SAP HANA Cloud dataset as the comparison reference for both systems.
- C. Accept connection checks, then update configuration records after UAT sign-off.
- D. Apply the UAT database value to the upgraded system before reviewing existing evidence.

答案： A

解題說明：

Feedback:

The correct sequence is to confirm active states, reconcile records, and then accept comparison evidence. This keeps the UAT result tied to documented SAP HANA database states.

問題 #107

A regional vehicle leasing company is updating its SAP HANA administration evidence model for a mixed landscape. The on-premises database supports active reporting, while an SAP HANA Cloud environment is used for migration rehearsal. During review, the administrator finds that the same readiness label is applied to architecture notes, active workload checks, and cloud rehearsal evidence. SAP HANA cockpit confirms the on-premises database is available, and SAP HANA Cloud Central confirms the cloud environment is running.

The constraint is that the administrator must avoid using one readiness label for different architectural responsibilities. The handover must show which evidence belongs to active operation, which belongs to cloud readiness, and which belongs to migration preparation.

Which action best strengthens the administration evidence model?

- A. Keep one readiness label because both environments are part of the same SAP HANA administration scope.
- **B. Separate evidence categories by active operation, cloud environment readiness, and migration preparation before approving handover.**
- C. Approve cloud readiness based on SAP HANA Cloud Central availability and defer architectural evidence mapping.
- D. Use only the on-premises evidence because it supports the current active reporting workload.

答案： B

解題說明：

This resolves the architecture evidence problem at the landscape classification layer. Separating evidence by operational purpose confirms that active administration, cloud readiness, and migration preparation are each validated against the appropriate SAP HANA target.

Feedback:

問題 #108

CHALLENGE 3 - Cloud Migration Readiness Separation

The modernization lead wants the SAP HANA Cloud database included in the same release readiness status because it is provisioned and has a limited activation dataset. The cloud environment has not completed the startup, monitoring, or recovery evidence package used for active UAT systems. What is the best response?

- A. Stop cloud planning until the current UAT release decision is fully completed.
- B. Use the upgraded reporting system's monitoring record as the SAP HANA Cloud readiness record.
- **C. Keep cloud migration evidence separate until cloud-specific administration validation is completed.**
- D. Include the cloud database in the same status because provisioning and limited data show progress.

答案： C

解題說明：

Feedback:

Cloud migration evidence should remain separate until cloud-specific administration validation is completed. Provisioning and limited data support planning, but they do not equal active UAT release readiness.

問題 #109

A regional airport operator maintains SAP HANA for operational analytics while preparing an administration model that covers an on-premises database and an SAP HANA Cloud target. During a readiness review, SAP HANA cockpit confirms the on-premises database is available, while SAP HANA Cloud Central confirms that the cloud target is provisioned. However, the review evidence does not identify which environment owns backup monitoring, daily administration checks, or migration rehearsal validation.

The constraint is that the administrator must prevent unclear operational ownership before the next handover meeting. The team must keep both environments in scope without treating tool visibility as proof that administration responsibilities are correctly assigned.

Which action best addresses the ownership ambiguity?

- A. Approve the handover because both environments are visible in their respective SAP administration tools.
- B. Remove the cloud target from the readiness review because it is not yet supporting the active workload.
- C. Use the on-premises database as the single administration reference until the migration project is fully completed.
- **D. Assign each administration activity to the correct SAP HANA environment and validate the evidence source for each responsibility.**

答案： D

解題說明:

Feedback:

This resolves the ambiguity at the operational ownership layer. Mapping each administration activity to the correct environment and validating the evidence source ensures that availability, backup monitoring, daily checks, and migration validation are not mixed across SAP HANA targets.

問題 #110

A regional office equipment company completes an SAP HANA upgrade rehearsal for an on-premises database. The database starts after the upgrade, and SAP HANA cockpit shows the system as available. During validation, the administrator finds that the operations runbook still references the pre-upgrade administration sequence for start, monitoring, and backup checks. The technical lead wants to approve the rehearsal because the upgraded system is running.

The constraint is that the administrator must ensure the runbook reflects the upgraded lifecycle state before using the rehearsal to approve production execution. The decision must not rely only on successful startup.

What should the administrator do before accepting the rehearsal?

- A. Approve the rehearsal because the upgraded database starts and SAP HANA cockpit shows availability.
- B. Keep the pre-upgrade runbook because the administration sequence worked before the upgrade rehearsal.
- C. Update the runbook for the upgraded lifecycle state, execute the administration sequence, and accept only after validation passes.
- D. Create a new data backup and use backup completion as proof that the post-upgrade runbook is valid.

答案: C

解題說明:

Feedback:

This corrects the lifecycle procedure dependency before acceptance. Updating and executing the runbook confirms that the upgraded state, administration sequence, monitoring checks, backup checks, and rehearsal evidence are aligned.

問題 #111

.....

KaoGuTi網站在通過C_DBADM_2601資格認證考試的考生中有著良好的口碑。這是大家都能看得到的事實。KaoGuTi以它強大的考古題得到人們的認可，只要你選擇它作為你的考前復習工具，就會在C_DBADM_2601資格考試中有非常滿意的收穫，這也是大家有目共睹的。現在馬上去網站下載免費試用版本，你就會相信自己的選擇不會錯。

C_DBADM_2601題庫: https://www.kaoguti.com/C_DBADM_2601_exam-pdf.html

這樣的話，可以讓你提高學習效率，更加充分地準備C_DBADM_2601考試，SAP C_DBADM_2601的難度比較高所以通過率也比較低，你已經看到KaoGuTi SAP的C_DBADM_2601考古題考試認證培訓資料，是時候做出選擇了，你甚至可以選擇其他的產品，不過你要知道我們KaoGuTi帶給你的無限大的利益，也只有KaoGuTi能給你100%保證成功，KaoGuTi能讓你有一個美好的前程，讓你以後在IT行業有更寬廣的道路可以走，高效率的工作在資訊技術領域，研究C_DBADM_2601考試主題，SAP C_DBADM_2601認證考試已經成為了IT行業中很熱門的一個考試，但是為了通過考試需要花很多時間和精力掌握好相關專業知識，KaoGuTi C_DBADM_2601題庫從使用過考古題的人們那裏得到了很多的好評。

所以天言真人在吞下了壹枚丹藥後，修為已經暫時恢復到了我道期，瓦爾迪說著又化為了壹灘水跡，迅速順著下水道離開了，這樣的話，可以讓你提高學習效率，更加充分地準備C_DBADM_2601考試，SAP C_DBADM_2601的難度比較高所以通過率也比較低。
