Reliable SPLK-1002 Exam Cram & SPLK-1002 Frequent Updates

The pass rate is 98.75% for SPLK-1002 learning materials, and if you choose us, we can ensure you that you will pass the exam just one time. We are pass guarantee and money back guarantee. We will refund your money if you fail to pass the exam. In addition, SPLK-1002 learning materials of us are compiled by professional experts, and therefore the quality and accuracy can be guaranteed. SPLK-1002 Exam Dumps of us offer you free update for one year, so that you can know the latest version for the exam, and the latest version for SPLK-1002 exam braindumps will be sent to your email automatically.

If you're looking to advance your career in data analytics or IT operations, the Splunk Core Certified Power User (SPLK-1002) certification exam is a great way to demonstrate your expertise with Splunk software. SPLK-1002 Exam is designed for individuals who have experience with Splunk and want to take their skills to the next level. By earning this certification, you'll become a recognized expert in using Splunk to analyze and visualize data, troubleshoot issues, and optimize performance.

Splunk Core Certified Power User Exam Sample Questions (Q112-Q117):

NEW QUESTION # 112
Field names are case _____.

- A. insensitive
- B. sensitive

Answer: B

NEW QUESTION # 113
Two separate results tables are being combined using the |join command. The outer table has the following values:
Refer to following Tables

email	employeeNumber
jsmith@acme.com	1
mcarpenter@acme.com	2
jrogers@acme.com	3
bsparrow@acme.com	4
eripper@acme.com	5

The inner table has the following values:

employeeNumber	firstName	lastName
1	John	Smith
2	Mary	Carpenter
3	Jeff	Rogers

The line of SPL used to join the tables is: | join employeeNumber type=outer How many rows are returned in the new table?

- A. Five
- B. Zero
- C. Three
- D. Eight

Answer: D

Explanation:
When performing an outer join in Splunk using the | join employeeNumber type=outer command, it combines the rows from both tables based on the employeeNumber field. An outer join returns all rows from both tables, with matching rows from both sides where available. If there is no match, the result is NULL on the side of the join where there is no match.
In the provided tables, there are five rows in the first table and three in the second. Since it's an outer join, all rows from both tables will be returned. This means the new table will have a total of eight rows, combining the matched rows and the unmatched rows from both tables.

NEW QUESTION # 114
Which of the following statements best describes a macro?

- A. A macro is a portion of a search that can be reused in multiple place
- B. A macro is a method of categorizing events based on a search.
- C. A macro is a knowledge object that enables you to schedule searches for specific events.
- D. A macro is a way to associate an additional (new) name with an existing field name.

Answer: A

Explanation:
The correct answer is C. A macro is a portion of a search that can be reused in multiple places.
A macro is a way to reuse a piece of SPL code in different searches. A macro can be any part of a search, such as an eval statement or a search term, and does not need to be a complete command. A macro can also take arguments, which are variables that can be replaced by different values when the macro is called. A macro can also contain another macro within it, which is called a nested macro1.
To create a macro, you need to define its name, definition, arguments, and description in the Settings > Advanced Search > Search Macros page in Splunk Web or in the macros.conf file. To use a macro in a search, you need to enclose the macro name in backtick characters (`) and provide values for the arguments if any1.
For example, if you have a macro named my_macro that takes one argument named object and has the following definition:
search sourcetype= object
You can use it in a search by writing:
my_macro(web)
This will expand the macro and run the following SPL code:
search sourcetype=web
The benefits of using macros are that they can simplify complex searches, reduce errors, improve readability, and promote consistency1.
The other options are not correct because they describe other types of knowledge objects in Splunk, not macros. These objects are:
A) An event type is a method of categorizing events based on a search. An event type assigns a label to events that match a specific search criteria. Event types can be used to filter and group events, create alerts, or generate reports2.
B) A field alias is a way to associate an additional (new) name with an existing field name. A field alias can be used to normalize fields from different sources that have different names but represent the same data. Field aliases can also be used to rename fields for clarity or convenience3.
D) An alert is a knowledge object that enables you to schedule searches for specific events and trigger actions when certain conditions are met. An alert can be used to monitor your data for anomalies, errors, or other patterns of interest and notify you or others when they occur4.

Use search macros in searches

NEW QUESTION # 115
Which of the following statements about tags is true?

- A. Tags are created at index time.
- B. Tags are case insensitive.
- C. Tags are searched by using the syntax tag :: <fieldname>.
- D. Tags can make your data more understandable.

Answer: D

Explanation:
Tags are a knowledge object that allow you to assign an alias to one or more field values . Tags are applied to events at search time and can be used as search terms or filters .
Tags can help you make your data more understandable by replacing cryptic or complex field values with meaningful names . For example, you can tag the value 200 in the status field as success, or tag the value 404 as not_found .

NEW QUESTION # 116
In which of the following scenarios is an event type more effective than a saved search?

- A. When the search string needs to be used in future searches.
- B. When formatting needs to be included with the search string.
- C. When a search should always include the same time range.
- D. When a search needs to be added to other users' dashboards.

Answer: B
