

最優良的JN0-105學習資料|第一次嘗試輕鬆學習並通過考試和可信任的Juniper Junos, Associate (JNCIA-Junos)

P.S. NewDumps在Google Drive上分享了免費的、最新的JN0-105考試題庫：<https://drive.google.com/open?id=1DHQ9V0yiSmW0nmJhKq1gCos-9OAo6pvY>

選擇使用NewDumps提供的產品，你踏上了IT行業巔峰的第一步，離你的夢想更近了一步。NewDumps為你提供的測試資料不僅能幫你通過Juniper JN0-105認證考試和鞏固你的專業知識，而且還能給你提供一年的免費更新服務。

Juniper JN0-105 考試大綱：

主題	簡介
主題 1	Networking Fundamentals: The topic networking fundamentals covers identifying the concepts and functionality of different fundamental elements of networking.
主題 2	User Interfaces: This topic delves into identifying the concepts, operation, or functionality of the Junos user interface.
主題 3	Junos OS Fundamentals: It covers concepts, benefits, and functionality of the core elements of the Junos OS.
主題 4	Routing Policy and Firewall Filters: The topic of Routing Policy and Firewall Filters covers routing policy and firewall filters on Junos devices. Furthermore, the topic also deals with routing policies and firewall filters on a Junos device.

JN0-105考試證照綜述，新版JN0-105題庫上線

隨著JN0-105考試的變化，NewDumps已經跟新了考試問題和答案，包括一些新增的問題，通過使用更新版本的Juniper JN0-105考古題，您可以輕鬆快速的通過考試，還節約寶貴的時間。獲得JN0-105認證之后，您的職業生涯也將開始新的輝煌時期。購買我們的Juniper JN0-105題庫資料可以保證考生一次性通過考試，這是值得大家信賴的題庫網站，可以幫大家減少考試成本，節約時間，是上班族需要獲取JN0-105認證的最佳選擇。

最新的 JNCIA JN0-105 免費考試真題 (Q40-Q45):

問題 #40

Exhibit

```
term limit-icmp { from {  
source-address {  
172.25.11.0/24;  
}  
}  
protocol icmp;  
}  
then {  
count count-icmp; discard;  
}  
}
```

Referring to the exhibit, which two actions will occur when a packet matches the firewall filter? (Choose two.)

- A. A counter will be incremented.
- B. The packet will be forwarded.
- C. An ICMP destination unreachable message will be returned.
- D. The packet will be discarded.

答案: A,D

解題說明:

Referring to the firewall filter configuration in the exhibit, when a packet matches the specified term limit- icmp, two actions are defined in the then statement: count count-icmp and discard. The count count-icmp action means that each time a packet matches this term, a counter named count-icmp will be incremented, providing a tally of how many packets have matched the term. The discard action means that the packet will be dropped and not forwarded through the device. This effectively prevents the packet from reaching its intended destination. There is no action specified that would cause an ICMP destination unreachable message to be returned, nor is there any action that would allow the packet to be forwarded.

問題 #41

What is the protocol data unit (PDU) of the Data Link Layer?

- A. bit
- B. byte
- C. frame
- D. segment

答案: C

解題說明:

In the OSI model, the Data Link Layer is responsible for node-to-node delivery of data. It frames the packets received from the Network Layer and prepares them for physical transmission. The Protocol Data Unit (PDU) for the Data Link Layer is called a "frame." Frames encapsulate the network layer packets, adding a header and a trailer that include the hardware addresses of the source and destination, among other things, facilitating the data link layer services like frame synchronization, flow control, and error checking.

問題 #42

What are two benefits when implementing class of service? (Choose two.)

- A. Traffic congestion will be eliminated.
- B. Latency-sensitive traffic can be prioritized
- C. The network will be faster.
- D. Traffic congestion can be managed.

答案: A,B

解題說明:

Implementing Class of Service (CoS) in a network provides numerous benefits, particularly in managing traffic based on its importance, source, or type. CoS enables network administrators to manage traffic congestion by applying various queuing techniques and policies to ensure that critical services remain unaffected during high congestion periods. Additionally, CoS allows for the prioritization of latency-sensitive traffic such as voice and video, ensuring that these services maintain quality despite varying network conditions.

問題 #43

You are asked to view the real-time usage statistics for the busiest interfaces on a device running Junos OS. Which command will achieve this task?

- A. monitor traffic
- B. monitor traffic absolute-sequence
- C. show interfaces extensive
- **D. monitor interface traffic**

答案： D

解題說明：

To view real-time usage statistics for the busiest interfaces on a device running Junos OS, the correct command is B, "monitor interface traffic." This command provides a dynamic, real-time view of the traffic flowing through the interfaces, allowing administrators to quickly identify and monitor the busiest interfaces on the device.

問題 #44

Which two statements are true about the Junos OS? (Choose two.)

- A. Exception traffic is never sent to the control plane.
- **B. Exception traffic is sent to the control plane.**
- C. Routing tables are stored in the forwarding plane.
- **D. Routing tables are stored in the control plane.**

答案： B,D

解題說明：

In Junos OS, as with many network operating systems, the control plane is responsible for processes that determine how to route traffic. This includes maintaining routing tables, which store information about network paths and protocols. Therefore, routing tables are indeed stored in the control plane.

Exception traffic refers to packets that cannot be processed by the normal fast-path processing of the Packet Forwarding Engine (PFE) in the forwarding plane, and thus are sent to the control plane for further processing. This might include packets destined for the router itself, packets that need to be fragmented, or packets that match certain firewall filter criteria, among other reasons. Routing tables are not stored in the forwarding plane. However, the forwarding plane contains the forwarding table (sometimes referred to as the forwarding information base or FIB), which is a distilled version of the routing table optimized for fast packet forwarding. The forwarding plane uses this information to perform the actual transfer of packets across the network device interfaces.

問題 #45
