We are committed to designing a kind of scientific AP-219 study material to balance your business and study schedule. With our AP-219 exam guide, all your learning process includes 20-30 hours. As long as you spare one or two hours a day to study with our laTest AP-219 Quiz prep, we assure that you will have a good command of the relevant knowledge before taking the AP-219 exam. What you need to do is to follow the AP-219 exam guide system at the pace you prefer as well as keep learning step by step.

Salesforce AP-219 Exam Syllabus Topics:

Topic	Details
Topic 1	• User Experience and Customization: Customizing Lightning UI for different user roles using declarative tools like Lightning Page Editor and Report Builder.

Topic 2	• Deployment and Debugging: Deployment options, lifecycle management, building processes with pre-configured data, and understanding supporting objects and system runtime.
Topic 3	• Data Model: Core objects (Order, Order Summary, Fulfillment Orders, Return Orders), B2C Commerce integrations, and tracing data flow including custom attributes.
Topic 4	• Process Automation and Integrations: Configuring end-to-end Order Management processes and external system integrations using declarative tools and clicks-based configuration.
Topic 5	• Advanced Topics: Troubleshooting configuration issues, diagnosing system integration problems, and resolving deployment obstacles.

Salesforce Order Management Administrator Accredited Professional Sample Questions (Q55-Q60):

NEW QUESTION # 55

A developer needs to create ascheduled job in an external system to move Order data into aSalesforce org every 24 hours. In which two ways can this off-platform job be established without additional third-party tools?

- A. Install a minimal set of dev tools on a machine such as theCommand Line Interface (CLI) and create appropriate scripts to import files containing the data
- B. Create a job inthe org (on-platform) to drop a file of existing data. Use the off-platform machine to generate a file and identify the details between the two. Push the changes to the org's "Import" directory
- C. Authorize a machine against the Salesforce org's APIs withappropriate security measures and create a script to call the APIs
- D. Set up an SFTP server as a waystation. drop the files there using the off-platform job and schedule a job in-platform to process the file

Answer: A,C

Explanation:

Two ways that this off-platform job can be established without additional third-party tools are:

Install a minimal set of dev tools on a machine such as the Command Line Interface (CLI) and create appropriate scripts to import files containing the data. The CLI is a tool that allows developers to interact with Salesforce from the command line. The developer can use the CLI to create scripts that use commands such as force:data:bulk:upsert or force:data:tree:import to import data from CSV or JSON files into Salesforce.

Authorize a machine against the Salesforce org's APIs with appropriate security measures and create a script to call the APIs. The APIs are interfaces that allow developers to access data and functionality in Salesforce from external systems. The developer can use the APIs, such as REST API or Bulk API, to create a script that authenticates with Salesforce using OAuth 2.0 or JWT, and then performs operations such asinsert, update, or delete on Order data.

NEW QUESTION # 56

An administrator is encountering errors when reusing a composite APIcall to load test orders via the Workbench. What are three possible causes of this issue?

- A. The number of subrequests in the JSON query exceeds the 20 subrequest limit
- B. Record IDs used within the request are incorrect
- C. The administrator has duplicate Product SKUs in the JSON query
- D. The administrator is creating multiple objects in a single JSON query
- E. The Administratorhas logged into the wrong environment in Workbench

Answer: A,B,C

Explanation:
Three possible causes of this issue are:
The administrator hasduplicate Product SKUs in the JSON query. A Product SKU is a unique identifier for a product that is used to track inventory and sales. A Product SKU must be unique within an org, and it cannot be duplicated in a composite API call. If the administrator has duplicate Product SKUs in the JSON query, it will cause an error when loading test orders via the Workbench.
The number of subrequests in the JSON query exceeds the 20 subrequest limit. A subrequest is a single HTTP request that is part of a compositeAPI call. A composite API call can contain up to 20 subrequests in a single JSON body. If the administrator has more than 20 subrequests in the JSON query, it will cause an error when loading test orders via the Workbench.
Record IDs used within the request are incorrect. A record ID is a unique identifier for a record that is used to reference and manipulate data in Salesforce. A record ID must be valid and exist in the org, and it must match the data type and format of the corresponding field. If the administrator has incorrect record IDs in the JSON query, such as using 15-character IDs instead of 18-character IDs, or using IDs from a different org, it will cause an error when loading test orders via the Workbench.

NEW QUESTION # 57
A customer orders 10 products. The products must be shipped to three different locations. Two of the orders are fulfilled at the same location. How many Fulfillment Orders would be created for this order?

- A. One Fulfillment Order pet destination, totaling 3
- B. One Fulfillment Order per Fulfillment Location, totaling 2
- C. One Fulfillment Order
- D. One Fulfilment Order per item in the order, totaling 10

Answer: A

Explanation:
The number of Fulfillment Orders that would be created for this order is one per destination, totaling 3. A Fulfillment Order is a record that represents a group of products in an order that are fulfilled together from the same location. A Fulfillment Order has a lookup relationship to the Order Summary object, and it contains information such as the fulfillment location, delivery method, status, etc. The number of Fulfillment Orders created depends on three factors: Fulfillment Location, Delivery Method and Recipient Address. These factors determine how the Order Items are grouped and allocated to Fulfillment Orders based on routing rules and inventory availability. In this case, since the products must be shippedto three different locations, three Fulfillment Orders are created for each destination. Verified Reference:https://help.salesforce.com/s/articleView?

NEW QUESTION # 58
An administrator suspects that recent changes to a flow have created a defect. The administrator wants to test the flow with input data that they believe will cause the error. What can the developer do next?

- A. Open theFlow and select Attach to Live Session. Provide the Session Id. Select Attach
- B. Open the Flow, Select Debug, Provide the input values, Select Run
- C. Open the Flow, Select Debug with inputs. Provide the input values, select Run
- D. Open the Flow and selectAttach to Live Session and Provide the Order Number

Answer: B

NEW QUESTION # 59
Once the administrator hasactivated the integration between B2C Commerce and Order Management, orders being placed by customers will be sent to Order Management if the order status is set to which two values?

- A. Created
- B. New
- C. Drafted
- D. Open
- E. Active

Answer: B,E

Explanation:
Once the administrator has activated the integration between B2C Commerce and Order Management, orders being placed by customers will be sent to Order Management if the order status is set to Active or New. These are the two order statuses that indicate that an order has been created or confirmed by a customer, and that it needs to be processed by Order Management.
