Free PDF Splunk - The Best SPLK-2002 Valid Exam Test

When we are not students, we have more responsibility. The time we can be dedicated to learning is less, but if you want to have a better development in the IT industry, it is very important to pass the international recognized IT certification exam such as SPLK-2002 exam. However, the IT elite our itPass4sure make efforts to provide you with the quickest method to help you Pass SPLK-2002 Exam. We provide three type version of SPLK-2002 exam materials: PDF, online and software version, and each version has its unique benifit. You can combine what you like and to choose a free trial of our demo.

The SPLK-2002 Certification is a valuable asset for professionals looking to advance their careers in data analytics and IT operations. It provides a recognized standard of excellence in Splunk architecture and deployment, and can open up new opportunities for career growth and advancement.

Splunk Enterprise Certified Architect Sample Questions (Q198-Q203):

NEW QUESTION # 198
What is a Splunk Job? (Select all that apply.)

- A. A child OS process manifested from the splunkd process.
- B. A user-defined Splunk capability.
- C. A search process kicked off via a report or an alert.
- D. Searches that are subjected to some usage quota.

Answer: B

NEW QUESTION # 199
Which Splunk internal field can confirm duplicate event issues from failed file monitoring?

- A. latest
- B. _time
- C. _indextime
- D. _index_latest

Answer: C

Explanation:
According to the Splunk documentation1, the _indextime field is the time when Splunk indexed the event.
This field can be used to confirm duplicate event issues from failed file monitoring, as it can show you when each duplicate event was indexed and if they have different _indextime values. You can use the Search Job Inspector to inspect the search job that returns the duplicate events and check the _indextime field for each event2. The other options are false because:
* The _time field is the time extracted from the event data, not the time when Splunk indexed the event. This field may not reflect the actual indexing time, especially if the event data has a different time zone or format than the Splunk server1.
* The _index_latest field is not a valid Splunk internal field, as it does not exist in the Splunk documentation or the Splunk data model3.
* The latest field is a field that represents the latest time bound of a search, not the time when Splunk indexed the event. This field is used to specify the time range of a search, along with the earliest field4.

NEW QUESTION # 200
Which Splunk server role regulates the functioning of indexer cluster?

- A. Indexer
- B. Deployer
- C. Monitoring Console
- D. Master Node

Answer: D

Explanation:
The master node is the Splunk server role that regulates the functioning of the indexer cluster. The master node coordinates the activities of the peer nodes, such as data replication, data searchability, and data recovery. The master node also manages the cluster configuration bundle and distributes it to the peer nodes. The indexer is the Splunk server role that indexes the incoming data and makes it searchable. The deployer is the Splunk server role that distributes apps and configuration updates to the search head cluster members. The monitoring console is the Splunk server role that monitors the health and performance of the Splunk deployment. For more information, see About indexer clusters and index replication in the Splunk documentation.

NEW QUESTION # 201
Which of the following security options must be explicitly configured (i.e. which options are not enabled by default)?

- A. Certificate authentication between Splunk Web and search head.
- B. Data encryption between Splunk Web and splunkd.
- C. Data encryption for distributed search between search heads and indexers.
- D. Certificate authentication between forwarders and indexers.

Answer: D

NEW QUESTION # 202
Stakeholders have identified high availability for searchable data as their top priority. Which of the following best addresses this requirement?

- A. Increasing the number of search heads in the cluster.

- B. Increasing the replication factor in the cluster.
- C. Increasing the number of CPUs on the indexers in the cluster.
- D. Increasing the search factor in the cluster.

Answer: D
