Thus the clients learn at any time and in any place and practice the SOL-C01 exam practice guide repeatedly.

Snowflake Certified SnowPro Associate - Platform Certification Sample Questions (Q46-Q51):

NEW QUESTION # 46

A user named 'DATA LOADER' is responsible for loading data into a table named 'ORDERS' in the 'PUBLIC' schema of the 'SALES DB' database. Initially, 'DATA LOADER' had the 'INSERT' privilege on the 'ORDERS' table. However, after a recent security audit, it was determined that

'DATA LOADER' should only have the ability to insert data without being able to see existing data in the table. What is the MOST appropriate action to take?

- A. Revoke the 'INSERT' privilege from 'DATA LOADER' and grant the 'WRITE' privilege instead.
- B. No change is required, as 'INSERT' privilege alone does not grant access to view existing data.
- C. Create a view on the 'ORDERS' table that excludes all columns, grant 'SELECT' on the view to 'DATA_LOADER', and revoke 'SELECT' on the base table.
- D. Revoke the 'INSERT' privilege from and grant the 'APPLY MASKING POLICY' privilege instead.
- E. Revoke the 'SELECT' privilege from 'DATA_LOADER' on the 'ORDERS' table.

Answer: B

Explanation:

The INSERT privilege, by itself, only allows a user to insert data into a table. It does not grant the ability to see existing data via SELECT. If the user only has the INSERT privilege, no action is required. If the user had other privileges, it could have allowed them to see data.

NEW QUESTION # 47

Which are the type of Views we have in Snowflake? (Choose any 3 options)

- A. UnMaterialized
- B. Non-Materialized
- C. Secure
- D. Materialized

Answer: B,C,D

Explanation:

Snowflake supports Non-Materialized Views (standard views), Materialized Views, and Secure Views. Non-materialized views compute results dynamically at query time. Materialized views store precomputed results, improving performance for repeated analytical queries. Secure views protect underlying query logic and metadata from being exposed, ensuring privacy when sharing datasets. The option "UnMaterialized" is not a Snowflake concept and does not exist as a view type.

NEW QUESTION # 48

Which of the following system-defined roles exist in Snowflake? (Choose any 3 options)

- A. SYSADMIN
- B. DATABASEADMIN
- C. ACCOUNTADMIN
- D. SECURITYADMIN

Answer: A,C,D

Explanation:

Snowflake provides a predefined set of system-defined roles that enforce Role-Based Access Control (RBAC).

These roles ensure structured governance and centralized privilege management across accounts. The primary system-defined roles include:

ACCOUNTADMIN, the highest-privileged role, responsible for global account-level activities such as billing, governance, replication, and cross-region/cloud configuration. It has implicit ownership of all objects.

SECURITYADMIN manages users, roles, MFA, and all privilege grants. This role ensures operational control over user lifecycle management while supporting separation of duties from ACCOUNTADMIN.

SYSADMIN manages objects such as databases, schemas, tables, warehouses, and other compute objects. It is the default role for data engineering and data platform teams needing full control of object creation and maintenance.

DATABASEADMIN does not exist as a system-defined role—it is typically user-created for customization.

System roles form a foundational security model for controlled privilege escalation and governance.

NEW QUESTION # 49

Where do tables reside in Snowflake?

- A. Schemas
- B. File formats
- C. Stages
- D. Virtual warehouses

Answer: A

Explanation:

In Snowflake's logical hierarchy, tables reside within schemas, and schemas reside within databases. This structured arrangement

allows clear organization, access management, and separation of workloads or business domains. A schema functions as a container that holds tables, views, functions, sequences, stages, and file formats. When users reference a table, they typically qualify it using the full three-part name:

database.schema.table.

Stages are used to store or reference files, not to hold structured database tables. Virtual warehouses provide compute power for executing queries and performing DML operations but do not store data. File formats define how staged files should be interpreted (CSV, JSON, Parquet, etc.) and are unrelated to where tables physically reside.

Snowflake separates compute and storage, so while compute happens in virtual warehouses, all persistent data-including tables-is managed in Snowflake's centralized storage layer, organized through schemas and databases. This organization ensures consistency, ease of management, and predictable access control.

NEW QUESTION # 50

Which of the following statements are true regarding considerations when working with VARIANT data types in Snowflake? (Select all that apply)

- A. Queries on VARIANT columns can be slower than queries on strongly-typed columns because Snowflake needs to infer the data type at runtime.
- B. You can use the operator to cast data extracted from a VARIANT column to a specific data type.
- C. Data stored in VARIANT columns always consumes less storage space than the equivalent data stored in strongly-typed columns.
- D. VARIANT columns can store data with different schema within the same column.
- E. Snowflake automatically indexes VARIANT columns, eliminating the need for manual index creation.

Answer: A,B,D

Explanation:

Option A is correct: Querying VARIANT columns involves runtime type inference, leading to potential performance overhead.

Option C is correct: VARIANT columns are designed to store data with flexible schema. Option D is correct: The operator is used for type casting when extracting data from VARIANT columns. Option B is incorrect: Snowflake does not automatically index VARIANT columns. Option E is incorrect: VARIANT columns can sometimes consume more storage space due to the metadata required to describe the data structure.

NEW QUESTION # 51

.....

As the labor market becomes more competitive, a lot of people, of course including students, company employees, etc., and all want to get SOL-C01 authentication in a very short time, this has developed into an inevitable trend. Each of them is eager to have a strong proof to highlight their abilities, so they have the opportunity to change their current status, including getting a better job, have higher pay, and get a higher quality of material, etc. It is not easy to qualify for a qualifying exam in such a short period of time. Our company's SOL-C01 learning material is very good at helping customers pass the exam and obtain a certificate in a short time, and now I'm going to show you our SOL-C01 Learning materials.
