```

<http:request method="POST" doc:name="POST HTTP /child" url="http://localhost:8081/child">
  </http:request>
  <logger level="INFO" doc:name="Logger"/>

Refer to the exhibits.

All three of the conditions for the Choice router are true. What messages are written in the application log?

- A. Route1,Route2,Default
- **B. Route1**
- C. Route2
- D. Route1,Route2

Answer: B

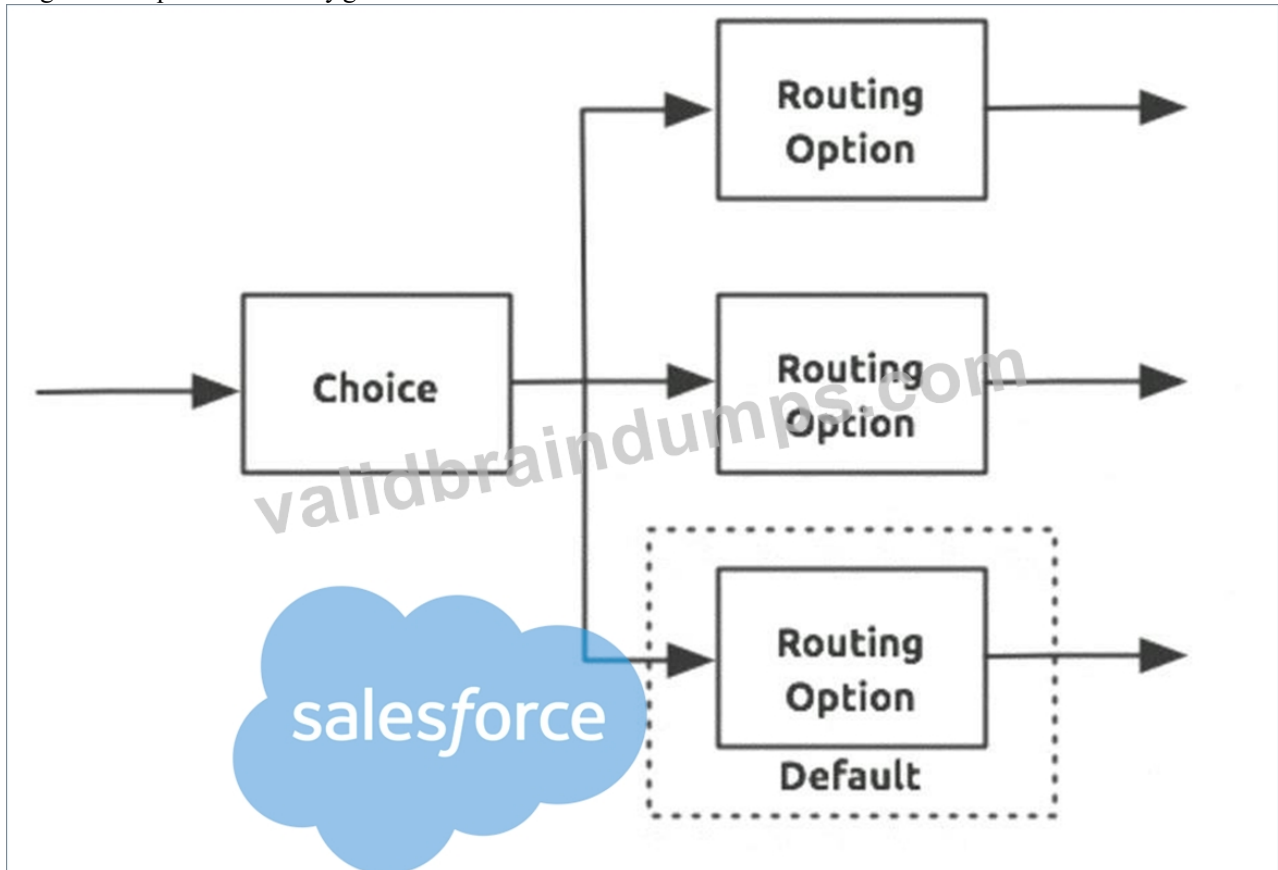

Explanation:

Only one of the routes in the Choice router executes, meaning that the first expression that evaluates to true triggers that route's execution and the others are not checked. If none of the expressions are true, then the default route executes. Hence only Route 1 will be executed as it is the first expression. Hence output of logger is Route 1.

MuleSoft Doc Ref : <https://docs.mulesoft.com/mule-runtime/4.3/choice-router-concept> The Choice router dynamically routes messages through a flow according to a set of DataWeave expressions that evaluate message content. Each expression is associated with a different routing option. The effect is to add conditional processing to a flow, similar to an if/then/else code block in most programming languages.

Only one of the routes in the Choice router executes, meaning that the first expression that evaluates to true triggers that route's execution and the others are not checked. If none of the expressions are true, then the default route executes.
