Get Real SAP Certified Associate - Process Data Analyst - SAP Signavio Test Guide to Quickly Prepare for SAP Certified Associate - Process Data Analyst - SAP Signavio Exam

One of the most effective strategies to prepare for the SAP Certified Associate - Process Data Analyst - SAP Signavio (C-SIGDA-2403) exam successfully is to prepare with actual SAP C-SIGDA-2403 exam questions. It would be difficult for the candidates to pass the C-SIGDA-2403 exam on the first try if the C-SIGDA-2403 study materials they use are not updated. Studying with invalid C-SIGDA-2403 practice material results in a waste of time and money. Therefore, updated SAP C-SIGDA-2403 practice questions are essential for the preparation of the C-SIGDA-2403 exam.

SAP Certified Associate - Process Data Analyst - SAP Signavio Sample

Questions (Q36-Q41):

NEW QUESTION # 36

What is a workflow?

- A. A method of data collection
- B. A report on business operations
- C. A business process model
- **D. A series of steps to be performed in a system**

Answer: D

NEW QUESTION # 37

You have accessed the landing page of the SAP Signavio Process Collaboration Hub. How can you mark your favorite diagrams?

- A. By using the search function
- B. By navigating through the process landscape
- **C. By clicking on the star icon**
- D. By clicking on the "Processes" button

Answer: C

Explanation:

In the SAP Signavio Process Collaboration Hub, users can mark their favorite diagrams for easy access. The correct method is:

* Option D (By clicking on the star icon): Each diagram listed in the Collaboration Hub can be marked as a favorite by clicking on the star icon associated with the diagram. This feature allows users to quickly access frequently used or important diagrams directly from their favorites list.

NEW QUESTION # 38

What is a core capability of the transaction code analysis?

- **A. It can check the number of transaction codes used on average for each process step and by company code**
- B. It can check the number of transaction codes used on average for one end-to-end process
- C. It can show the various ways processes are executed in reality across the entire organization
- D. It can show the average ways processes are executed in a particular company code

Answer: A

Explanation:

Transaction code analysis in SAP Signavio Process Intelligence examines the usage of transaction codes in SAP systems to understand process execution. The documentation details:

* Exact Extract: "Transaction code analysis provides insights into the number of transaction codes used on average for each process step, segmented by company code, to identify variations in process execution across organizational units." (SAP Signavio Process Intelligence User Guide, section on "Transaction Code Analysis").

* Explanation:

* Option B (It can check the number of transaction codes used on average for each process step and by company code): This is correct as transaction code analysis breaks down the usage of SAP transaction codes (e.g., VA01 for sales order creation) per process step and company code, highlighting differences in how processes are executed.

* Option A (It can check the number of transaction codes used on average for one end-to-end process) is incorrect as the analysis focuses on individual steps, not the entire process.

* Option C (It can show the various ways processes are executed in reality across the entire organization) is incorrect because this is a function of Process Discovery or Variant Explorer, not transaction code analysis.

* Option D (It can show the average ways processes are executed in a particular company code) is incorrect as it describes process variants, not transaction code usage.

NEW QUESTION # 39

How do you filter all published processes in the workspace?

- A. Type the word "Publishing state" in the search field and press Enter.
- **B. Switch to Advanced Search, and select the field "Publishing state".**
- C. Switch to Advanced Search, and select the field "Publishing date".
- D. Type the word "Publish" in the Search field and press Enter.

Answer: B

Explanation:

To filter all published processes in the workspace, the most effective method is:

* Option B (Switch to Advanced Search, and select the field "Publishing state"): This option allows users to specifically target the publishing state of processes within the SAP Signavio workspace. By using the Advanced Search functionality and selecting the "Publishing state" field, users can filter the processes based on their publishing status (e.g., published, not published), facilitating the management and review of published processes.

NEW QUESTION # 40

What do Timer Events and Conditional Events have in common?

- A. They can only be used as start events.
- B. They can only be throwing-type events.
- **C. They can only be catching-type events.**
- D. They can only be used as end events.

Answer: C
