Pass Guaranteed 2026 Mule-101: Salesforce Certified MuleSoft Integration Foundations Updated New Exam Experience

If you have the certification for the exam, your competitive force and wage will be improved in your company. Mule-101 exam cram can help you pass the exam and obtain the corresponding certification successfully. We have a professional team to collect and research the latest information for the exam, and you can know the latest information if you choose us. We offer you free update for 365 days for Mule-101 Exam Dumps, and our system will send you the latest version automatically. You can receive the downloading link and password for Mule-101 exam dumps within ten minutes after payment.

Salesforce Certified MuleSoft Integration Foundations Sample Questions (Q24-Q29):

NEW QUESTION # 24

According to MuleSoft's recommended REST conventions, which HTTP method should an API use to specify how API clients can request data from a specified resource?

- A. PATCH
- B. POST
- C. PUT
- D. GET

Answer: D

Explanation:

HTTP GET: The GET method is used to retrieve (read) a representation of a resource⁴. It is safe and idempotent, meaning it does not alter the state of the server.

Usage: If you want to "request data" (e.g., Get Customer Details), GET is the standard method.

Why others are incorrect:

POST: Used to create a new resource.

PUT: Used to replace (update) an entire resource.

PATCH: Used to partially update a resource.

NEW QUESTION # 25

An IT integration team followed an API-led connectivity approach to implement an order-fulfillment business process. It created an order processing API that coordinates stateful interactions with a variety of microservices that validate, create, and fulfill new product orders.

- A. Orchestration
- B. Aggregation
- C. Multicasting
- D. Streaming

Answer: A

Explanation:

Orchestration: This refers to the logic where a central controller (the Process API) manages the interactions between multiple systems to achieve a business goal.

The Scenario: The API is "coordinating stateful interactions" (e.g., Step 1: Validate Customer -> Step 2: Check Inventory -> Step 3: Debit Payment -> Step 4: Create Shipment). This strictly sequential or logic-driven coordination is the definition of Orchestration.

Why others are incorrect:

Aggregation: Specifically refers to just gathering data from multiple sources (Scatter-Gather) and combining the results, usually without complex state management or sequential logic.

Streaming: Refers to processing data in continuous chunks, not the logic of coordinating services.

NEW QUESTION # 26

According to MuleSoft, which deployment characteristic applies to a microservices application architecture?

- A. Core business capabilities are encapsulated in a single, deployable application
- B. A deployment to enhance one capability requires a redeployment of all capabilities
- C. All services of an application can be deployed together as single Java WAR file
- D. Services exist as independent deployment artifacts and can be scaled independently of other services

Answer: D

Explanation:

Microservices Architecture: This approach structures an application as a collection of loosely coupled services¹⁰.

Independent Scalability: A defining characteristic is that each microservice is a separate deployment unit. If one service (e.g., "Order Processing") receives high load, you can scale only that service without having to scale the entire application¹¹.

Independent Deployment: You can update and redeploy a single microservice without impacting or redeploying the others.

Why others are incorrect:

Single Java WAR / Single deployable application (A, B): These describe a Monolithic architecture¹².

Redeployment of all (D): This is a major downside of Monoliths, not Microservices¹³.

NEW QUESTION # 27

According to MuleSoft, which system integration term describes the method, format, and protocol used for communication between two systems? ⁴

- A. Interaction
- B. Message

- C. Component
- **D. Interface**

Answer: D

NEW QUESTION # 28

According to MuleSoft's IT delivery and operating model, which approach can an organization adopt in order to reduce the frequency of IT project delivery failures?

- A. Prevent technology sprawl by reducing production of API assets
- B. Stop scope creep by centralizing requirements-gathering
- **C. Decouple central IT projects from the innovation that happens within each line of business**
- D. Adopt an enterprise data model

Answer: C

Explanation:

The Problem (IT Delivery Gap): Traditional IT operating models often treat IT as a centralized factory, which becomes a bottleneck. The business demands change faster than Central IT can deliver, leading to project failures or delays.

The Solution (Decoupling): MuleSoft advocates for a new operating model (C4E) where Central IT produces reusable assets (System APIs) and then "gets out of the way." Innovation at the Edge: By decoupling core IT from the Line of Business (LOB), the LOB developers can self-serve those assets to build their own Process and Experience APIs. This allows innovation to happen in parallel across the organization, rather than waiting in a single queue, thus reducing failure rates associated with bottlenecks. 1111

NEW QUESTION # 29

.....

The Mule-101 Exam software's user-friendly interface is made to uproot potential problems. Once you will try the demo of Mule-101 exam questions, you will be well-acquainted with the software and its related features. Also Mule-101 exam comes with various self-assessment features like timed exam, randomization questions, and multiple questions types, test history and score etc. Which means it enables you to customize the question type and you may practice random questions in order to enhance your skills and expertise. You may keep attempting the same questions many a time also.
