Fortinet FCSS - SD-WAN 7.4 Architect Sample Questions (Q16-Q21):

NEW QUESTION # 16
You manage an SD-WAN topology. You will soon deploy 50 new branches. Which three tasks can you do in advance to simplify

this deployment? (Choose three.)

- A. Update the DHCP server configuration.
- B. Create policy blueprint.
- C. Define metadata variables value for each device.
- D. Create a ZTP template.
- E. Create model devices.

Answer: B,D,E

NEW QUESTION # 17
You have configured the performance SLA with the probe mode as Prefer Passive.
What are two observable impacts of this configuration? (Choose two.)

- A. After FortiGate switches to active mode, the SLA performance rule falls back to passive monitoring after 3 minutes.
- B. FortiGate passively monitors the member if TCP traffic is passing through the member.
- C. During passive monitoring, the SLA performance rule cannot detect dead members.
- D. FortiGate passively monitors the member if ICMP traffic is passing through the member.
- E. FortiGate can offload the traffic that is subject to passive monitoring to hardware.

Answer: B,D

Explanation:
FortiGate passively monitors the member if TCP traffic is passing through the member → With Prefer Passive mode, FortiGate inspects existing traffic (like TCP flows) to measure performance metrics without generating its own probes.
FortiGate passively monitors the member if ICMP traffic is passing through the member → Similarly, when ICMP flows exist, FortiGate uses them for SLA checks.

NEW QUESTION # 18
What are three key routing principles of SD-WAN? (Choose three.)

- A. Policy routes have precedence over SD-WAN rules.
- B. SD-WAN members are skipped if they do not have a valid route to the destination.
- C. Directly connected routes have precedence over SD-WAN rules.
- D. SD-WAN rules are skipped if the best route to the destination is a static route
- E. SD-WAN rules are skipped if the best route to the destination is not an SD-WAN member.

Answer: A,B,E

Explanation:
Fortinet outlines key SD-WAN routing principles:
"Policy routes are always evaluated before SD-WAN rules, meaning if a policy route matches, SD-WAN steering is bypassed. If the best route for a destination is not via an SD-WAN member, SD-WAN rules do not apply, and members are ignored if they lack a valid route. This hierarchy ensures traffic always follows the most deterministic and valid path according to configuration."
Understanding these principles is critical for correct SD-WAN and routing integration.

NEW QUESTION # 19
The FortiGate devices are managed by ForliManager, and are configured for direct internet access (DIA). You confirm that DIA is working as expected for each branch, and check the SD- WAN zone configuration and firewall policies shown in the exhibits.

Then, you use the SD-WAN overlay template to configure the IPsec overlay tunnels. You create the associated SD-WAN rules to connect existing branches to the company hub device and apply the changes on the branches.

After those changes, users complain that they lost internet access. DIA is no longer working.

Based on the exhibit, which statement best describes the possible root cause of this issue?

- A. The SD-WAN overlay template defines a zone for each underlay interface and moves the interfaces into those zones.
- B. The SD-WAN overlay template redefines the interface gateway addresses if they are defined with metadata variables.
- C. The SD-WAN overlay template didn't configure a firewall policy to allow traffic through the overlay.
- D. The SD-WAN overlay template updates the SD-WAN template and the rules.

Answer: A

Explanation:

The SD-WAN overlay template defines a zone for each underlay interface and moves the interfaces into those zones. This statement

perfectly describes the likely sequence of events. The template, when applied, re-organizes the interfaces and zones, causing the existing firewall policy that relies on the old zone configuration to fail. This is the most plausible root cause.

NEW QUESTION # 20
The administrator uses the FortiManager SD-WAN overlay template to prepare an SD-WAN deployment. Using information provided through the SD-WAN overlay template wizard, FortiManager creates templates ready to install on the spoke and hub devices.
What are the three templates created by the SD-WAN overlay template for a spoke device?
(Choose three.)

- A. Static route template
- B. IPsec tunnel template
- C. Rules template
- D. BGP template
- E. CLI template

Answer: B,C,D

Explanation:
Rules template → Defines the SD-WAN rules for traffic steering.
BGP template → Configures dynamic routing for overlay tunnels.
IPsec tunnel template → Builds the IPsec VPN tunnels from the spoke to the hubs.
