## H12-711\_V4.0 Latest Test Fee | H12-711\_V4.0 Exam Collection

Candidates who want to be satisfied with the HCIA-Security V4.0 (H12-711\_V4.0) preparation material before buying can try a free demo. Customers who choose this platform to prepare for the Huawei H12-711\_V4.0 Exam require a high level of satisfaction. For this reason, BraindumpsIT has a support team that works around the clock to help H12-711\_V4.0 applicants find answers to their concerns.

Huawei H12-711\_V4.0 (HCIA-Security V4.0) exam is a certification exam offered by Huawei Technologies Co. Ltd. It is designed to test the knowledge and skills of individuals who want to pursue a career in IT security, specifically in Huawei security technologies. H12-711\_V4.0 Exam covers a wide range of topics, including network security, security management, firewall technology, intrusion prevention and detection, and VPN technology.

### Huawei HCIA-Security V4.0 Sample Questions (Q63-Q68):

#### NEW QUESTION # 63

Which of the following options belong to the certification areas of ISO27001? (Multiple Choice)

- A. Business Continuity Management
- B. Personnel safety
- C. Access control
- D. Vulnerability Management

**Answer: A,B,C,D**

#### NEW QUESTION # 64

In the VGMP group status, if the device's own VGMP group priority is equal to the VGMP group priority of the peer device, the device's VGMP group status is ().

**Answer:**

Explanation:  
load-balance

#### NEW QUESTION # 65

Devices that need to provide network services externally, such as WWW servers and FTP servers, can be placed in the DMZ.

- A. FALSE
- B. TRUE

**Answer: B**

Explanation:

This statement is TRUE . A DMZ is a special security zone used to place servers that must provide services to external users while still being isolated from the internal trusted network. Typical examples include WWW servers, FTP servers, mail servers, and DNS servers . These systems need to be accessible from outside networks such as the Internet, but placing them directly inside the internal network would increase security risk.

The purpose of the DMZ is to create a buffer area between the Untrust zone and the Trust zone. External users can be allowed to access the public-facing servers in the DMZ according to security policies, while access from the DMZ to the internal network can be more strictly restricted. This design helps reduce the chance that an attacker who compromises a public server can directly reach sensitive internal systems.

On Huawei firewalls, the DMZ is one of the default security zones and is specifically intended for such semi- public service devices. Therefore, devices that provide external network services, such as WWW and FTP servers, can correctly be deployed in the DMZ

#### NEW QUESTION # 66

Which of the following does not belong to the levels classified in network security incidents?
