

2V0-16.25 Pass4sure Questions & 2V0-16.25 Vce Training & 2V0-16.25 Free Demo

P.S. Free 2026 VMware 2V0-16.25 dumps are available on Google Drive shared by Dumpexams: https://drive.google.com/open?id=1UCGkFLq2jqu5Ugp_WLpmd_Dk57sCOiWo

I believe that a lot of people working in the IT industry hope to pass some IT certification exams to obtain the corresponding certifications. Some IT authentication certificates can help you promote to a higher job position in this fiercely competitive IT industry. Now the very popular VMware 2V0-16.25 authentication certificate is one of them. Although passing the VMware certification 2V0-16.25 exam is not so easy, there are still many ways to help you successfully pass the exam. While you can choose to spend a lot of time and energy to review the related IT knowledge, and also you can choose a effective training course. Dumpexams can provide the pertinent simulation test,which is very effective to help you pass the exam and can save your precious time and energy to achieve your dream. Dumpexams will be your best choice.

Undoubtedly, passing the VMware 2V0-16.25 certification exam is one big achievement. Regardless of how tough the 2V0-16.25 exam is, it serves an important purpose of improving your skills and knowledge of a specific field. Once you become certified by VMware 2V0-16.25, a whole new career scope will open up to you.

New 2V0-16.25 Braindumps - 2V0-16.25 Printable PDF

By analyzing the syllabus and new trend, our 2V0-16.25 practice engine is totally in line with this exam for your reference. So grapple with this chance, our 2V0-16.25 learning materials will not let you down. With our 2V0-16.25 Study Guide, not only that you can pass you exam easily and smoothly, but also you can have a wonderful study experience based on the diversed versions of our 2V0-16.25 training prep.

VMware 2V0-16.25 Exam Syllabus Topics:

Topic	Details

Topic 1	<ul style="list-style-type: none"> Deploy, Configure, and Operate VMware vSphere Foundation (VVF): This section of the exam measures the expertise of Data Center Administrators and emphasizes hands-on skills in deploying and configuring VMware vSphere Foundation environments. Candidates must understand the components of a VVF deployment, configure Supervisors within clusters, and manage identity, access control, licensing, and certificate management. The objectives also extend to lifecycle management within the vSphere Foundation. Furthermore, it explores operational tasks including monitoring and analyzing logs, configuring alerting, managing dashboards, and integrating with VMware Cloud Foundation (VCF) Operations. Candidates will also be tested on cost and pricing configuration, compliance monitoring, and security hardening practices. Finally, automation skills are validated through deploying services with Supervisors, running Kubernetes workloads, using VM services, and integrating VCF Operations Orchestrator to support enterprise automation.
Topic 2	<ul style="list-style-type: none"> VMware vSphere Foundation Fundamentals: This section of the exam measures the skills of Virtualization Engineers and focuses on the essentials of virtualization technology. It introduces the principles of virtualization, explores use cases, and highlights the value it brings to businesses. Candidates are expected to demonstrate knowledge of VMware compute components such as vCenter and ESX, cluster configuration, and lifecycle management of virtual machines. It also covers secure workload operations, encryption, and managing resources with content libraries. In addition, storage fundamentals are examined through configuring vSphere storage, deploying VMware vSAN clusters, defining storage policies, and ensuring data availability. Networking fundamentals are also introduced, requiring the ability to differentiate between VMware vSphere networking components.
Topic 3	<ul style="list-style-type: none"> IT Architectures, Technologies, Standards: This section of the exam measures the understanding of IT Infrastructure Architects and covers foundational concepts of architectures, emerging technologies, and industry standards. Although no testable objectives are listed here, it establishes the baseline knowledge needed to interpret and design VMware-related environments effectively.
Topic 4	<ul style="list-style-type: none"> Plan and Design the VMware by Broadcom Solution: This section of the exam measures the ability of VMware Solution Architects to plan and design solutions. While there are no specific testable objectives included, the focus is on preparing professionals to design VMware-based solutions that align with organizational goals and best practices.
Topic 5	<ul style="list-style-type: none"> Troubleshoot and Optimize the VMware Solution: This section of the exam measures the ability of Systems Engineers to troubleshoot and optimize VMware-based environments. While no explicit testable objectives are listed, candidates are expected to apply their problem-solving skills to diagnose, resolve, and enhance VMware solutions for improved reliability and performance.

VMware vSphere Foundation 9.0 Administrator Sample Questions (Q30-Q35):

NEW QUESTION # 30

An administrator is tasked with deploying a VMware Cloud Foundation (VCF) Operations for Logs appliance into vSphere Foundation.

After downloading the .ova, which component does the administrator use to deploy the file?

- A. VCF Automation
- B. VCF Operations
- C. VCF Fleet Management
- D. vSphere Client**

Answer: D

Explanation:

To deploy the VCF Operations for Logs OVA appliance:

* The vSphere Client is used to deploy .ova and .ovf templates directly into a vCenter environment.

* After deployment, the appliance can be configured and integrated with VCF.

Other options:

* A. VCF Fleet Management# Used for multi-instance management, not OVA deployment.

- * C. VCF Automation# Provides automation workflows, not appliance deployment.
- * D. VCF Operations# Monitoring and analytics platform, not used for OVA installs.

NEW QUESTION # 31

An administrator is tasked to install a new VMware ESX host to an existing cluster. When the installation is completed, the host is not able to be reached from the vCenter.

When testing the host's management network, the default gateway, primary DNS, and secondary DNS are all unreachable, and the host name cannot be resolved. The VLAN for the management network is set correctly and the adapters are all connected.

What is the first step in troubleshooting this connectivity issue?

- A. Reinstall ESX on the host.
- B. Verify the DVS configuration in vCenter.
- C. Verify the correct TCP/IP information is configured.
- D. Disconnect and reconnect the physical network cable.

Answer: C

Explanation:

When a newly installed ESX host cannot be reached and all basic network tests (gateway, DNS, hostname resolution) fail:

- * The first troubleshooting step is to confirm that the management network TCP/IP configuration (IP address, subnet mask, default gateway, DNS servers) is correct.
- * If this is misconfigured, the host will not communicate with vCenter or resolve names.
- * B. Verify DVS configuration in vCenter# Requires host connectivity first.
- * C. Reinstall ESX# Too drastic without confirming networking basics.
- * D. Disconnect/reconnect cable# Less likely since VLANs/adapters are reported as connected.

NEW QUESTION # 32

A virtual machine (VM) owner has requested to move a VM from one cluster to another. The following information has been provided:

- * The VM cannot have downtime during the transfer.
- * The same network is present on both clusters.
- * The datastore that the VM is currently on is not present in the destination cluster.

What step should the administrator perform to move the VM?

- A. Perform a vMotion with Storage vMotion to the new cluster.
- B. Backup the VM and restore it to the new cluster.
- C. Inform the owner the VM cannot be moved to the new cluster.
- D. Perform a vMotion of the VM to the new cluster.

Answer: A

Explanation:

To move a VM to another cluster:

- * Requirement: Zero downtime# Requires vMotion.
- * Challenge: Datastore not shared# Requires Storage vMotion.
- * The combined operation, Cross-Cluster vMotion with Storage vMotion, allows moving compute and storage at the same time, with no downtime.

Other options:

- * A. vMotion only# Requires shared datastore, not available here.
- * B. Backup/restore# Causes downtime, not acceptable.
- * D. Cannot be moved# Incorrect; vMotion + Storage vMotion supports this.

VMware vSphere 9.0 - Cross-Cluster vMotion Requirements

NEW QUESTION # 33

An administrator is tasked with creating a custom VMware Cloud Foundation (VCF) Operations Web Certificate. What are three requirements to which the certificate must conform to be used with VCF Operations? (Choose three.)

- A. In the certificate file, all certificates and the private key must be in PEM format.
- B. In the certificate file, the server certificate must be first in the order of certificates.
- C. In the certificate file, the server certificate must be last in the order of certificates.
- D. In the certificate file, all certificates and the private key must be in PFX format.
- E. The VCF Operations certificate cannot use the Subject Alternative Name (SAN) extension.
- F. The certificate file must include the server certificate, a private key, and all issuing certificates.

Answer: A,B,F

Explanation:

VCF Operations requires that custom SSL certificates meet these requirements:

- * Certificates and private key must be in PEM format. (A)
- * The server certificate must be listed first in the file. (D)
- * The file must include the server certificate, private key, and full certificate chain (issuing/intermediate/root CA). (E)

Why others are wrong:

- * B. Server certificate last# Incorrect, it must be first.
- * C. Cannot use SAN extension# Incorrect, SAN is supported and recommended.
- * F. PFX format# Not supported for VCF Operations.

NEW QUESTION # 34

An administrator is preparing to deploy VMware vSphere Foundation using the VMware Cloud Foundation (VCF) Installer wizard. During host onboarding, it is discovered that the VMware ESX hosts each have different root passwords.

Which deployment method must be used to continue the installation?

- A. Set the password to expire on all ESX hosts.
- B. Proceed with the wizard and override host credentials during staging.
- C. Use the deployment wizard and enter credentials per host manually.
- D. Use a JSON specification file to define per-host credentials.

Answer: D

Explanation:

When deploying VMware vSphere Foundation using the VCF Installer wizard, host onboarding requires consistent access credentials.

- * If ESX hosts have different root passwords, the wizard cannot proceed using a single credential.
- * In this case, administrators must use a JSON specification file to define per-host credentials, ensuring each host can be onboarded successfully.
- * The JSON specification allows defining host-specific parameters (IP, hostname, root password, networking, etc.).

Other options are incorrect:

- * A. Proceed with the wizard and override host credentials during staging# Not supported.
- * B. Use deployment wizard and enter credentials per host manually# Wizard requires uniform credentials.
- * C. Set password to expire on all ESX hosts# Irrelevant to deployment and would cause failures.
