

SPLK-4001 Valid Dumps Free, SPLK-4001 Reliable Source

BONUS!!! Download part of Real4test SPLK-4001 dumps for free: https://drive.google.com/open?id=1LNIP_sXj7voHTVTeEzLzh9KZYdSGMM9o

We have confidence and ability to make you get large returns but just need input small investment. our SPLK-4001 study materials provide a platform which help you gain knowledge in order to let you outstanding in the labor market and get satisfying job that you like. The content of our SPLK-4001 question torrent is easy to master and simplify the important information. It conveys more important information for SPLK-4001 Exam with less answers and questions, thus the learning is easy and efficient. We believe our latest SPLK-4001 exam torrent will be the best choice for you.

Splunk SPLK-4001 is a certification exam intended for professionals who want to demonstrate their technical expertise in using Splunk to analyze and monitor various metrics related to cloud infrastructure. SPLK-4001 exam is designed for individuals who work with Splunk and are looking to develop their skills in implementing metrics in complex, distributed systems.

Splunk SPLK-4001 certification exam is a globally recognized certification program that demonstrates the candidate's mastery in using Splunk's O11y Cloud platform to monitor and analyze metrics. Splunk O11y Cloud Certified Metrics User certification is recognized by industry experts and employers, providing candidates with a competitive edge in the job market. Splunk O11y Cloud Certified Metrics User certification program also provides candidates with access to Splunk's community of experts, resources, and tools, enabling them to stay up-to-date with the latest trends and best practices in using Splunk's O11y Cloud platform.

SPLK-4001 exam practice & SPLK-4001 latest dumps & SPLK-4001 training torrent

As we all know, respect and power is gained through knowledge or skill. The society will never welcome lazy people. Do not satisfy what you have owned. Challenge some fresh and meaningful things, and when you complete SPLK-4001 Exam, you will find you have reached a broader place where you have never reach. For instance, our SPLK-4001 practice torrent is the most suitable

learning product for you to complete your targets.

Splunk O11y Cloud Certified Metrics User Sample Questions (Q12-Q17):

NEW QUESTION # 12

An SRE creates a new detector to receive an alert when server latency is higher than 260 milliseconds.

Latency below 260 milliseconds is healthy for their service. The SRE creates a New Detector with a Custom Metrics Alert Rule for latency and sets a Static Threshold alert condition at 260ms.

How can the number of alerts be reduced?

- A. Adjust the threshold.
- **B. Adjust the Trigger sensitivity. Duration set to 1 minute.**
- C. Choose another signal.
- D. Adjust the notification sensitivity. Duration set to 1 minute.

Answer: B

Explanation:

Explanation

According to the Splunk O11y Cloud Certified Metrics User Track document¹, trigger sensitivity is a setting that determines how long a signal must remain above or below a threshold before an alert is triggered. By default, trigger sensitivity is set to Immediate, which means that an alert is triggered as soon as the signal crosses the threshold. This can result in a lot of alerts, especially if the signal fluctuates frequently around the threshold value. To reduce the number of alerts, you can adjust the trigger sensitivity to a longer duration, such as 1 minute, 5 minutes, or 15 minutes. This means that an alert is only triggered if the signal stays above or below the threshold for the specified duration. This can help filter out noise and focus on more persistent issues.

NEW QUESTION # 13

The built-in Kubernetes Navigator includes which of the following?

- A. Map, Clusters, Workloads, Node Detail, Workload Detail, Pod Detail, Container Detail
- B. Map, Nodes, Workloads, Node Detail, Workload Detail, Group Detail, Container Detail
- C. Map, Nodes, Processors, Node Detail, Workload Detail, Pod Detail, Container Detail
- **D. Map, Nodes, Workloads, Node Detail, Workload Detail, Pod Detail, Container Detail**

Answer: D

Explanation:

The correct answer is D. Map, Nodes, Workloads, Node Detail, Workload Detail, Pod Detail, Container Detail.

The built-in Kubernetes Navigator is a feature of Splunk Observability Cloud that provides a comprehensive and intuitive way to monitor the performance and health of Kubernetes environments. It includes the following views:

Map: A graphical representation of the Kubernetes cluster topology, showing the relationships and dependencies among nodes,

Pods, containers, and services. You can use the map to quickly identify and troubleshoot issues in your cluster¹ Nodes: A tabular view of all the nodes in your cluster, showing key metrics such as CPU utilization, memory usage, disk usage, and network traffic.

You can use the nodes view to compare and analyze the performance of different nodes¹ Workloads: A tabular view of all the workloads in your cluster, showing key metrics such as CPU utilization, memory usage, network traffic, and error rate. You can use the workloads view to compare and analyze the performance of different workloads, such as deployments, stateful sets, daemon sets, or jobs¹ Node Detail: A detailed view of a specific node in your cluster, showing key metrics and charts for CPU utilization, memory usage, disk usage, network traffic, and pod count. You can also see the list of pods running on the node and their status.

You can use the node detail view to drill down into the performance of a single node² Workload Detail: A detailed view of a specific workload in your cluster, showing key metrics and charts for CPU utilization, memory usage, network traffic, error rate, and pod count. You can also see the list of pods belonging to the workload and their status. You can use the workload detail view to drill down into the performance of a single workload² Pod Detail: A detailed view of a specific pod in your cluster, showing key metrics and charts for CPU utilization, memory usage, network traffic, error rate, and container count. You can also see the list of containers within the pod and their status. You can use the pod detail view to drill down into the performance of a single pod² Container Detail:

A detailed view of a specific container in your cluster, showing key metrics and charts for CPU utilization, memory usage, network traffic, error rate, and log events. You can use the container detail view to drill down into the performance of a single container² To learn more about how to use Kubernetes Navigator in Splunk Observability Cloud, you can refer to this documentation³.

NEW QUESTION # 14

An SRE creates an event feed chart in a dashboard that shows a list of events that meet criteria they specify. Which of the following should they include? (select all that apply)

- A. Events created when a detector clears an alert.
- B. Events created when a detector triggers an alert.
- C. Custom events that have been sent in from an external source.
- D. Random alerts from active detectors.

Answer: A,B,C

Explanation:

According to the web search results¹, an event feed chart is a type of chart that shows a list of events that meet criteria you specify. An event feed chart can display one or more event types depending on how you specify the criteria. The event types that you can include in an event feed chart are:

Custom events that have been sent in from an external source: These are events that you have created or received from a third-party service or tool, such as AWS CloudWatch, GitHub, Jenkins, or PagerDuty. You can send custom events to Splunk Observability Cloud using the API or the Event Ingest Service.

Events created when a detector triggers or clears an alert: These are events that are automatically generated by Splunk Observability Cloud when a detector evaluates a metric or dimension and finds that it meets the alert condition or returns to normal. You can create detectors to monitor and alert on various metrics and dimensions using the UI or the API.

Therefore, option A, B, and D are correct.

NEW QUESTION # 15

Which analytic function can be used to discover peak page visits for a site over the last day?

- A. Count: (Id)
- B. Maximum: Aggregation (Id)
- C. Maximum: Transformation (24h)
- D. Lag: (24h)

Answer: C

Explanation:

According to the Splunk Observability Cloud documentation¹, the maximum function is an analytic function that returns the highest value of a metric or a dimension over a specified time interval. The maximum function can be used as a transformation or an aggregation. A transformation applies the function to each metric time series (MTS) individually, while an aggregation applies the function to all MTS and returns a single value. For example, to discover the peak page visits for a site over the last day, you can use the following SignalFlow code:

```
maximum(24h, counters("page.visits"))
```

This will return the highest value of the page.visits counter metric for each MTS over the last 24 hours. You can then use a chart to visualize the results and identify the peak page visits for each MTS.

NEW QUESTION # 16

A customer is experiencing issues getting metrics from a new receiver they have configured in the OpenTelemetry Collector. How would the customer go about troubleshooting further with the logging exporter?

- A. Adding debug into the metrics exporter pipeline:

```
metrics:
  receivers: [hostmetrics, otlp, signalfx, smartagent/signalfx-forwarder]
  processors: [memory_limiter, batch, resourcedetection]
  exporters: [signalfx, debug]
```

- B. Adding debug into the metrics receiver pipeline:

```
metrics:
  receivers: [hostmetrics, otlp, signalfx, smartagent/signalfx-forwarder, debug]
  processors: [memory_limiter, batch, resourcedetection]
  exporters: [signalfx]
```

- C. Adding logging into the metrics receiver pipeline:

```
metrics:
  receivers: [hostmetrics, otlp, signalfx, smartagent/signalfx-forwarder, logging]
  processors: [memory_limiter, batch, resourcedetection]
  exporters: [signalfx]
```

- D. Adding logging into the metrics exporter pipeline:

```
metrics:
  receivers: [hostmetrics, otlp, signalfx, smartagent/signalfx-forwarder]
  processors: [memory_limiter, batch, resourcedetection]
  exporters: [signalfx, logging]
```

Answer: C

Explanation:

The correct answer is B. Adding logging into the metrics receiver pipeline.

The logging exporter is a component that allows the OpenTelemetry Collector to send traces, metrics, and logs directly to the console. It can be used to diagnose and troubleshoot issues with telemetry received and processed by the Collector, or to obtain samples for other purposes¹. To activate the logging exporter, you need to add it to the pipeline that you want to diagnose. In this case, since you are experiencing issues with a new receiver for metrics, you need to add the logging exporter to the metrics receiver pipeline. This will create a new plot that shows the metrics received by the Collector and any errors or warnings that might occur¹. The image that you have sent with your question shows how to add the logging exporter to the metrics receiver pipeline. You can see that the exporters section of the metrics pipeline includes logging as one of the options. This means that the metrics received by any of the receivers listed in the receivers section will be sent to the logging exporter as well as to any other exporters listed². To learn more about how to use the logging exporter in Splunk Observability Cloud, you can refer to this documentation¹.

1: <https://docs.splunk.com/Observability/gdi/opentelemetry/components/logging-exporter.html> 2:

<https://docs.splunk.com/Observability/gdi/opentelemetry/exposed-endpoints.html>

NEW QUESTION # 17

.....

All these three Splunk SPLK-4001 exam questions formats contain the real Splunk SPLK-4001 exam questions and are very easy to install and use. Just choose the best Splunk SPLK-4001 Exam Questions format that suits your budget and SPLK-4001 exam preparation requirement and starts preparing today.
