The administrator wants to understand the expected behavior for traffic matching the SD-WAN rule.
Based on the exhibits, what can the administrator expect for traffic matching the SD-WAN rule?

- A. The traffic will be routed over HUB1-VPN3.
- B. The traffic will be routed over HUB1-VPN1.
- C. The traffic will be load balanced across all three overlays
- D. The traffic will be routed over HUB1-VPN2

Answer: D

Explanation:
The rule is in SLA mode with two SLAs. From the status, HUB1-VPN2 and HUB1-VPN3 meet the SLA (sla(0x2) and sla(0x3)), while HUB1-VPN1 does not (sla(0x0)). Among members that meet SLA, FortiGate uses the configured order (priority-members 4 5 6) to pick the first eligible one- HUB1-VPN2-so traffic is routed over HUB1-VPN2.

NEW QUESTION # 36
When a customer delegate the installation and management of its SD-WAN infrastructure to an MSSP, the MSSP usually keeps the hub within its infrastructure for ease of management and to share costly resources.
In which two situations will the MSSP install the hub in customer premises? (Choose two.)

- A. The customer requires SIA with centralized breakout.
- B. The customer expects a large amount of VoIP traffic.
- C. The administrator expects a large volume of traffic between the branches.
- D. The majority of the branch traffic is directed to a corporate data center.

Answer: A,C

NEW QUESTION # 37
You have configured the performance SLA with the probe mode as Prefer Passive.
What are two observable impacts of this configuration? (Choose two.)

- A. During passive monitoring, the SLA performance rule cannot detect dead members.
- B. FortiGate can offload the traffic that is subject to passive monitoring to hardware.
- C. FortiGate passively monitors the member if ICMP traffic is passing through the member.
- D. FortiGate passively monitors the member if TCP traffic is passing through the member.
- E. After FortiGate switches to active mode, the SLA performance rule falls back to passive monitoring after 3 minutes.

Answer: C,D

Explanation:
FortiGate passively monitors the member if TCP traffic is passing through the member → With Prefer Passive mode, FortiGate inspects existing traffic (like TCP flows) to measure performance metrics without generating its own probes.
FortiGate passively monitors the member if ICMP traffic is passing through the member → Similarly, when ICMP flows exist, FortiGate uses them for SLA checks.
