Wünschen Sie jetzt die früheren Prüfungsfragen und Nachschlagebücher von ATlassian ACP-120 Zertifizierungsprüfungen? Sie haben nicht genug Zeit, die ATlassian ACP-120 Zertifizierungsprüfung vorzubereiten, wenn Sie sich mit der Arbeit beschäftigt sind. Deshalb ist es sehr wichtig für Sie, hocheffektive Prüfungsunterlagen auszuwählen. Deshalb ist es sehr wichtig, ein richtiges Lerngerät zu wählen. Wählen Sie bitte ATlassian ACP-120 Dumps von Prüfung Frage.

Die Atlassian ACP-120 (Jira Cloud Administrator) Prüfung ist eine wichtige Zertifizierung für Fachleute, die mit Jira Cloud arbeiten. Es zeigt, dass der Kandidat über die Fähigkeiten und das Wissen verfügt, die erforderlich sind, um die Jira -Cloud -Instanzen effektiv zu verwalten und sicherzustellen, dass er für die Bedürfnisse ihrer Organisation optimiert ist. Durch die Erteilung dieser Zertifizierung können Fachkräfte ihre Karriereaussichten verbessern und potenziellen Arbeitgebern ihren Wert demonstrieren.

Die Atlassian ACP-120 (Jira Cloud Administrator) -Prüfung richtet sich an Personen, die Erfahrung in der Verwaltung von Jira-Cloud-Umgebungen haben. Diese Zertifizierung bestätigt die Fähigkeiten und Kenntnisse, die für die Konfiguration, Verwaltung und Wartung von Jira -Cloud -Anwendungen erforderlich sind. Die Prüfung richtet sich an Jira -Administratoren, Systemadministratoren und IT -Fachkräfte, die für die Verwaltung von Jira -Cloud -Umgebungen verantwortlich sind.

Um ein zertifizierter Jira-Cloud-Administrator zu werden, müssen die Kandidaten die ACP-120-Prüfung bestehen, die aus 65 Multiple-Choice-Fragen besteht. Die Prüfung deckt eine Reihe von Themen ab, darunter Projekt- und Ausgabenverwaltung, Benutzerverwaltung, Berechtigungen, Workflows und Integrationen mit anderen Tools. Das Bestehen der Prüfung zeigt, dass der Kandidat ein starkes Verständnis der Jira -Verwaltung hat und Jira für sein Team oder seine Organisation effektiv verwalten und anpassen kann. Die Zertifizierung ist zwei Jahre lang gültig und kann durch eine Rezertifizierungsprüfung erneuert werden.

ACP-120 PDF - ACP-120 Tests

PrüfungFrage ist eine professionelle Website, die den Kandidaten Trainingsmaterialien bietet. Außerdem ist PrüfungFrage eine gute Wahl für Sie, die ACP-120 Zertifizierungsprüfung erfolgreich abzulegen. PrüfungFrage bietet Prüfungsmaterialien für die ACP-120 Zertifizierung, so dass die IT-Fachleute ihr Wissen konsolidieren können. PrüfungFrage stellt den an der ATlassian ACP-120 Zertifizierungsprüfung Teilnehmenden Kandidaten die neuesten und genauen Prüfungsfragen und Antworten zur Verfügung.

ATLASSIAN Jira Cloud Administrator ACP-120 Prüfungsfragen mit Lösungen (Q59-Q64):

59. Frage

You created a new "Create a new issue or add a comment to an existing issue" mail handler. What two fields have specific settings in the handler? (Choose two.)

- A. Epic Link
- B. Watchers
- C. Reporter
- D. Priority
- E. Custom Field

Antwort: C,D

Begründung:

The question pertains to configuring a "Create a new issue or add a comment to an existing issue" mail handler in Jira Software Cloud. Mail handlers process incoming emails to create issues or add comments, and certain fields can be specifically configured to control how the handler behaves. According to Jira Cloud documentation, the two fields with specific settings in this type of mail handler are Reporter and Priority.

* Explanation of the Correct Answers:

* Reporter (Option C):

* The Reporter field specifies the user who is set as the reporter of the issue created by the mail handler. In the mail handler configuration, you can define whether the reporter is set to a default user, derived from the email's "From" address (if the email address matches a Jira user), or another specified user.

* Exact Extract from Documentation:

Configuring an email handler

When setting up a mail handler like "Create a new issue or add a comment to an existing issue," you can configure the following settings:

* Reporter: Specify the user who will be set as the reporter for new issues. Options include:

* The user associated with the email's "From" address (if they have a Jira account).

* A default user (e.g., a project lead or a specific user account).

* If no valid user is found, the handler can be configured to reject the email or use a fallback user. This setting ensures that the issue is attributed to the correct user as the reporter. (Source: Atlassian Support Documentation, "Configure email handlers in Jira Cloud")

* Why This Fits: The Reporter field is a critical setting in the mail handler, as it determines who is recorded as creating the issue, which affects permissions, notifications, and reporting.

* Priority (Option D):

* The Priority field allows you to set a default priority for issues created by the mail handler if the email does not explicitly specify a priority. This ensures that new issues have a consistent priority unless overridden by the email content.

* Exact Extract from Documentation:

Field settings for mail handlers

For the "Create a new issue or add a comment to an existing issue" handler, you can specify default values for certain fields, including:

* Priority: Set a default priority for new issues (e.g., Medium, High). If the email contains a specific priority value (e.g., via a keyword or mapping), it can override the default. These settings allow you to control the behavior of issue creation and ensure consistency in field values. (Source: Atlassian Support Documentation, "Configure email handlers in Jira Cloud")

* Why This Fits: The Priority field is explicitly configurable in the mail handler to ensure that new issues are assigned an appropriate priority, making it one of the two fields with specific settings.

* Why Other Options Are Incorrect:

* Epic Link (Option A):

* The Epic Link field is not specifically configurable in the mail handler settings. While you can map email content to fields like Epic Link using advanced configurations (e.g., regex or scripting in Automation), it is not a standard field with specific settings in the mail handler configuration interface.

* Extract from Documentation:

Mail handlers allow mapping of email content to standard fields like Summary, Description, or Priority.

Advanced field mappings, such as Epic Link, require custom automation rules or third-party apps.

(Source: Atlassian Support Documentation, "Automate email processing with Jira Automation")

* Custom Field (Option B):

* While custom fields can sometimes be populated via email content (e.g., through regex or automation), the mail handler's standard configuration does not provide specific settings for custom fields. The handler focuses on system fields like Reporter and Priority.

* Extract from Documentation:

Custom fields are not directly supported in the default mail handler settings. To populate custom fields, you may need to use Jira Automation or a third-party mail handler app.

(Source: Atlassian Support Documentation, "Configure email handlers in Jira Cloud")

* Watchers (Option E):

* The Watchers field is not a configurable setting in the mail handler. You cannot specify default watchers or automatically add watchers based on email content in the standard mail handler configuration. Watchers are typically managed manually or via automation rules.

* Extract from Documentation:

Watchers are not a configurable field in mail handlers. To add watchers automatically, use Jira Automation or a workflow post function.

(Source: Atlassian Support Documentation, "Configure notifications and watchers")

* Additional Notes:

* The "Create a new issue or add a comment to an existing issue" mail handler is one of several mail handler types in Jira Cloud. Its configuration focuses on ensuring that issues are created with the correct metadata (e.g., Reporter, Priority) and that comments are added to existing issues based on issue keys in the email subject.

* Configuring the Reporter and Priority fields ensures that issues created via email align with project workflows and notification schemes.

60. Frage

A project is using the Approval workflow shown.

The project lead has communicated the following change requests:

- It should be possible to transition issues into the Awaiting Approval status from any other status apart from the Approved status.
- Different transition screens will be needed for each transition into the Awaiting Approval status.

How do you configure the workflow to satisfy these requirements?

- A. - Create a transition from the Open to the Awaiting Approval status.
- Create appropriate transition screens and associate them with the individual transitions into the Awaiting Approval status.
- B. - Create a global transition to the Awaiting Approval status.
- Create multiple appropriate transition screens and associate it with the global transition.
- C. - Reuse the Request approval transition between the Open and Awaiting Approval status.
- Create an appropriate transition screen and associate it with the transition.
- D. - Create a transition from the Open to the Awaiting Approval status.
- Reuse the existing transition screen from the Request approval transition.
- E. - Create a global transition to the Awaiting Approval status.
- Create an appropriate transition screen and associate it with the global transition.

Antwort: E

61. Frage

You inherited a mature Jira instance with hundreds of projects and associated schemes. You are trying to optimize the administration of the instance.

You need to create a new project and determine which schemes to apply.

Select the two best approaches. (Choose two.)

- A. Create a custom project template that uses the most common shared schemes.
- B. Use one of the project templates other than Jira Default Schemes.
- C. Create a project using the Jira Default Schemes and then create new schemes to avoid sharing conflicts.
- D. Evaluate existing shared schemes based on common project category or other criteria.

- E. Attempt to generalize existing schemes with project roles and share those.
- F. Use the Scheme Helper admin tool to see which combinations of schemes are compatible.

Antwort: D,F

62. Frage

On the Bulk Operation screen, Taylor is unable to choose the Delete Issues bulk action. What does Taylor definitely need?

- A. Global permissions
- B. Project permissions
- C. Jira administration privileges
- D. Organization admin privileges
- E. Project administration privileges

Antwort: B

Begründung:

The inability to choose the Delete Issues bulk action on the Bulk Operation screen indicates that Taylor lacks the necessary permission to delete issues in the project. The Delete Issues permission, which is a project-level permission defined in the project's permission scheme, is required for this action. Therefore, Taylor definitely needs project permissions (Option D).

* Explanation of the Correct Answer (Option D):

* The Delete Issues permission allows users to delete issues, including via bulk operations. This permission is granted through the project's permission scheme and is specific to the project containing the issues. If Taylor cannot select the Delete Issues bulk action, she lacks this permission for the project.

* Exact Extract from Documentation:

Delete Issues permission

The Delete Issues permission allows users to delete issues, either individually or via bulk operations. This permission is granted via the project's permission scheme.

To perform bulk operations:

* Run a filter to select issues.

* On the Bulk Operation screen, choose an action (e.g., Delete Issues). Note: Users must have the relevant permission (e.g., Delete Issues) for all selected issues to see the action in the bulk operation wizard. To check permissions:

* Go to Project settings > Permissions.

* Verify which users, groups, or roles have the Delete Issues permission. (Source: Atlassian Support Documentation, "Manage permissions in Jira Cloud")

* Why This Fits: The Delete Issues permission is a project-level permission, and granting it to Taylor will enable her to choose the Delete Issues bulk action, making project permissions (Option D) the correct answer.

* Why Other Options Are Incorrect:

* Organization admin privileges (Option A):

* Organization admins manage Atlassian organization settings, such as user access and billing. They do not directly control project-level permissions like Delete Issues.

* Extract from Documentation:

Organization admins manage user access and organization settings. Project-specific actions, like deleting issues, are controlled by project permissions.

(Source: Atlassian Support Documentation, "Manage your Atlassian organization")

* Jira administration privileges (Option B):

* Jira administrators manage global settings, such as schemes and user management. While they can modify permission schemes, the Delete Issues permission is project-specific and does not require Jira admin privileges to grant or use.

* Extract from Documentation:

Jira administrators can modify permission schemes, but the Delete Issues permission is applied at the project level and does not require admin privileges to use.

(Source: Atlassian Support Documentation, "Manage permissions in Jira Cloud")

* Global permissions (Option C):

* Global permissions (e.g., Administer Jira, Create Projects) control system-wide actions, not project-specific actions like deleting issues. The Delete Issues permission is project-level, not global.

* Extract from Documentation:

Global permissions control system-wide actions, such as administering Jira or sharing filters. Project permissions, like Delete Issues, are specific to projects.

(Source: Atlassian Support Documentation, "Manage global permissions")

* Project administration privileges (Option E):

* Project administration privileges (via the `Administer Projects` permission) allow users to manage project settings, such as components and permission schemes. However, deleting issues is an issue-level action that requires the `Delete Issues` permission, not administrative privileges.

* Extract from Documentation:

The `Administer Projects` permission allows managing project settings. Deleting issues requires the `Delete Issues` permission, which is separate.

(Source: Atlassian Support Documentation, "Manage permissions in Jira Cloud")

* Additional Notes:

* To resolve the issue, check Taylor's permissions in `Project settings > Permissions` and ensure she has the `Delete Issues` permission, either directly, via a group, or via a project role.

* If the issues in the bulk operation span multiple projects, Taylor needs the `Delete Issues` permission for all relevant projects.

63. Frage

Which statement is correct regarding Jira Cloud import and export features?

- A. Project admins can import their own projects.
- B. Jira admins can import backup files.
- **C. Jira admins can create backup files.**
- D. Org admins can restore overwritten backups.
- E. Project admins can create site backups.

Antwort: C

Begründung:

Jira Cloud's import and export features allow administrators to back up, restore, or migrate data. The correct statement is that Jira admins can create backup files (Option A), as this is a supported function for Jira administrators.

* Explanation of the Correct Answer (Option A):

* Jira administrators have the ability to create backup files for a Jira Cloud site, which include issues, configurations, users, and media (e.g., attachments). These backups can be used for restoration or migration purposes.

* Exact Extract from Documentation:

Create a backup for Jira Cloud

Jira administrators can create backup files that include issues, configurations, users, and media.

To create a backup:

* Go to `Settings > System > Backup manager`.

* Select `Create backup for cloud`.

* Download the backup file when ready. Note: Requires Jira administrator permissions.

Backup files can be used for restoration or migration. (Source: Atlassian Support Documentation, "Back up Jira Cloud data")

* Why This Fits: The ability to create backup files is explicitly granted to Jira admins, making Option A the correct statement.

* Why Other Options Are Incorrect:

* Org admins can restore overwritten backups (Option B):

* Organization admins manage Atlassian organization settings (e.g., billing, user access) but do not have direct access to Jira-specific backup restoration. Restoring backups, including overwritten ones, is handled by Jira administrators or support requests to Atlassian. Overwritten backups cannot typically be restored without Atlassian intervention.

* Extract from Documentation:

Organization admins manage organization-level settings. Restoring backups, including overwritten ones, requires Jira administrator permissions or Atlassian support.

(Source: Atlassian Support Documentation, "Manage your Atlassian organization")

* Project admins can import their own projects (Option C):

* Project admins can manage project settings (e.g., permissions, issue types) but do not have permissions to import projects or data, as this is a system-level action reserved for Jira administrators.

* Extract from Documentation:

Importing projects or data requires Jira administrator permissions. Project admins cannot perform imports.

(Source: Atlassian Support Documentation, "Import data to Jira Cloud")

* Project admins can create site backups (Option D):

* Creating site backups is a system-level action restricted to Jira administrators. Project admins lack the permissions to create backups for the entire site or their projects.

Only Jira administrators can create site backups in Settings > System > Backup manager. Project admins do not have this capability. (Source: Atlassian Support Documentation, "Back up Jira Cloud data")

* Jira admins can import backup files (Option E):

* While Jira admins can initiate the import process for backup files, the actual import of full site backups typically requires Atlassian support or is performed through specific tools (e.

g, Import Jira Cloud feature). Partial imports (e.g., CSV, Trello) are supported, but full backup imports are not a standard Jira admin action without additional steps. This makes the statement less definitively correct compared to Option A.

* Extract from Documentation:

Importing full site backups often requires Atlassian support. Jira admins can import partial data (e.g., CSV, JSON) but not full backups directly.

(Source: Atlassian Support Documentation, "Restore your Jira Cloud site from a backup")

* Additional Notes:

* Creating a backup is a straightforward action for Jira admins in Settings > System > Backup manager.

* The backup process requires Jira administrator privileges, not project admin or organization admin roles.

* Full backup imports or restoration of overwritten backups typically involve Atlassian support, limiting the scope of Jira admin actions.
