## **New AZ-140 Study Notes | AZ-140 Latest Test Online**

There are numerous AZ-140 exam dumps for the candidates to select for their preparation the exams, some candidates may get confused by so many choice. Our AZ-140 learning materials have free demo for the candidates, and they will have a general idea

about the AZ-140 Learning Materials. You can obtain the AZ-140 learning materials for about ten minutes. The payment is also quite easy: online payment with credit card, and the private information of the you is also guaranteed.

To earn the Microsoft AZ-140 Certification, candidates must pass one exam, which consists of around 40-60 multiple-choice questions. AZ-140 exam duration is two hours, and the passing score is 700 out of 1000. AZ-140 exam fee is \$165, and candidates can take the exam online or at a certified testing center. The AZ-140 certification is an intermediate-level certification and is suitable for IT professionals, administrators, and architects who have experience with virtualization technologies, Azure cloud services, and Windows operating systems. Configuring and Operating Microsoft Azure Virtual Desktop certification demonstrates the candidate's ability to design and implement Virtual Desktop infrastructure in Azure and provides a competitive edge in the job market.

## Microsoft Configuring and Operating Microsoft Azure Virtual Desktop Sample Questions (Q27-Q32):

### NEW QUESTION # 27

You have a Azure Virtual Desktop deployment that contains multiple host pools.

You need to create a PowerShell script to sign users out of a specific session host before you perform a maintenance task.

Which PowerShell module should you load in the script?

- A. Az.Maintenance
- B. Az.COMputC
- C. Az.DektopVirtualization
- D. Az.Automation

**Answer: C**

Explanation:

### NEW QUESTION # 29

You have an Azure subscription that contains the resources shown in the following table.

Name	Type	Location
VNet1	Virtual network	East US
VNet2	Virtual network	West US
VNet3	Virtual network	Central US
storage1	Storage account	East US

You have a virtual machine named Sever 1 that runs Windows Server and is connected to VNet3.

**Answer:**

**Explanation:**

**NEW QUESTION # 30**

You have an Azure subscription that contains a hybrid Azure Active Directory (Azure AD) tenant and two domain-joined Azure virtual machines. The virtual machines run Windows Server 2019 and contain managed disks.

You plan to deploy an Azure Virtual Desktop host pool that will use a Storage Spaces Direct Scale-Out File Server to host user profiles.

You need to ensure that the virtual machines can host the Storage Spaces Direct deployment. The solution must meet the following requirements:

- \* Ensure that the user profiles are available if a single server falls.
- \* Minimize administrative effort.

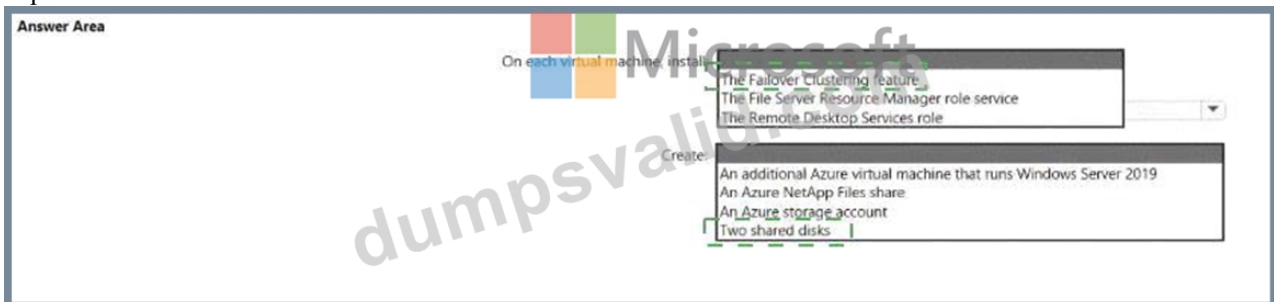

What should you do? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

Answer Area

**Answer:**

**Explanation:**

Explanation

Graphical user interface, text, application Description automatically generated

On each virtual machine, install:

- The Failover Clustering feature
- The File Server Resource Manager role service
- The Remote Desktop Services role

Create:

- An additional Azure virtual machine that runs Windows Server 2019
- An Azure NetApp Files share
- An Azure storage account
- Two shared disks

### NEW QUESTION # 31

Hotspot Question

You have an Azure subscription that contains the resources shown in the following table.

Name	Type	Location
VNet1	Virtual network	East US
VNet2	Virtual network	West US
VNet3	Virtual network	Central US
storage1	Storage account	East US

You have a virtual machine named Server1 that runs Windows Server and is connected to VNet3.

You need to deploy the Azure Virtual Desktop host pools shown in the following table.

Name	Description
Pool1	Session hosts are connected to VNet1
Pool2	Session hosts are connected to VNet2

The solution must meet the following requirements:

- The session hosts in Pool1 must access Server1 via the Microsoft backbone network.
- The session hosts in Pool2 must access storage1 via the Microsoft backbone network.

What should you configure on the virtual networks? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

**Answer Area**

VNet1:  ▼

- A private endpoint
- A service endpoint
- A VPN gateway
- Virtual Network peering

VNet2:  ▼

- A private endpoint
- A service endpoint
- A VPN gateway
- Virtual Network peering

**Answer:**

Explanation:
