Fortinet NSE 8 - Written Exam (NSE8_812) Sample Questions (Q87-Q92):

NEW QUESTION # 87

Refer to the exhibit.

A FortiWeb appliance is configured for load balancing web sessions to internal web servers. The Server Pool is configured as shown in the exhibit.

How will the sessions be load balanced between server 1 and server 2 during normal operation?

- A. Server 1 will receive 20% of the sessions, Server 2 will receive 66.6% of the sessions
- **B. Server 1 will receive 0% of the sessions Server 2 will receive 100% of the sessions**
- C. Server 1 will receive 33.3% of the sessions, Server 2 will receive 66.6% of the sessions
- D. Server 1 will receive 25% of the sessions, Server 2 will receive 75% of the sessions

Answer: B

Explanation:

D is correct because server 1 has a weight of 0, which means it will not receive any sessions from the load balancer. Server 2 has a weight of 100, which means it will receive all sessions from the load balancer. This is explained in the FortiWeb Administration Guide under Server Load Balancing > Server pools > Weighted round robin. Reference:

<https://docs.fortinet.com/document/fortiweb/6.3.0/administration-guide/381057/server-load-balancing>

<https://docs.fortinet.com/document/fortiweb/6.3.0/administration-guide/381057/server-load-balancing/381058/server-pools>

NEW QUESTION # 88

Refer to the exhibit.

You have been tasked with replacing the managed switch Forti Switch 2 shown in the topology.

Which two actions are correct regarding the replacement process? (Choose two.)

- **A. After replacing the FortiSwitch unit, the automatically created trunk name does not change**
- **B. CLAG-ICL needs to be manually reconfigured once the new switch is connected to the FortiGate**
- C. After replacing the FortiSwitch unit, the automatically created trunk name changes.
- D. MCLAG-ICL will be automatically reconfigured once the new switch is connected to the FortiGate.

Answer: A,B

Explanation:

* A is correct because the automatically created trunk name is based on the MAC address of the FortiSwitch unit. When the FortiSwitch unit is replaced, the MAC address will change, but the trunk name will not change.

* B is correct because CLAG-ICL is a manually configured link aggregation group. When the FortiSwitch unit is replaced, the CLAG-ICL configuration will need to be manually reconfigured on the new FortiSwitch unit.

The other options are incorrect. Option C is incorrect because the automatically created trunk name does not change when the FortiSwitch unit is replaced. Option D is incorrect because MCLAG-ICL is a manually configured link aggregation group and will not be automatically reconfigured when the FortiSwitch unit is replaced.

NEW QUESTION # 89

Refer to the exhibit.

You have been tasked with replacing the managed switch Forti Switch 2 shown in the topology.

Which two actions are correct regarding the replacement process? (Choose two.)

- A. After replacing the FortiSwitch unit, the automatically created trunk name does not change
- B. CLAG-ICL needs to be manually reconfigured once the new switch is connected to the FortiGate
- C. After replacing the FortiSwitch unit, the automatically created trunk name changes.
- D. MCLAG-ICL will be automatically reconfigured once the new switch is connected to the FortiGate.

Answer: A,B

Explanation:

A is correct because the automatically created trunk name is based on the MAC address of the FortiSwitch unit. When the FortiSwitch unit is replaced, the MAC address will change, but the trunk name will not change.

B is correct because CLAG-ICL is a manually configured link aggregation group. When the FortiSwitch unit is replaced, the CLAG-ICL configuration will need to be manually reconfigured on the new FortiSwitch unit.

The other options are incorrect. Option C is incorrect because the automatically created trunk name does not change when the FortiSwitch unit is replaced. Option D is incorrect because MCLAG-ICL is a manually configured link aggregation group and will not be automatically reconfigured when the FortiSwitch unit is replaced.

NEW QUESTION # 90

Refer to the exhibit, which shows a FortiGate configuration snippet.

A customer in Costa Rica has a FortiGate with SD-WAN configured to use a VPN connection to the United States to browse the internet using a public IP from that country. They would like to enable the SD-WAN rule using a webhook.

Which configuration must be added to the FortiGate, and which type of HTTP request must be used to accomplish this? (Choose two.)

- A. ☐
- B. ☒
- C. ☒
- D. ☐

Answer: B,C

NEW QUESTION # 91

Refer to the exhibit.

What is happening in this scenario?

- A. The user status changed at FortiClient EMS to off-net.
- B. The user is authenticating against a FortiGate Captive Portal.
- C The user is authenticating against an IdP.
- C. The user has not authenticated on their external browser.

Answer: C
