## Salesforce Certified B2C Commerce Architect Sample Questions (Q32-Q37):

### NEW QUESTION # 32

An Order Management System (OMS) handles orders from multiple brandspecific sites, as part of the processing, the OMS sends the processing detail to be added at notes to the orders in B2C Commerce. These processing details are captured temporarily in custom objects, and are later processed by a batch Job that:

- \* Processes the custom object to extract the orderid and note data.
- \* Tries to load the order.

\* If the order is not found, it deletes the custom object and moves on.

\* If the order is found, it updates notes In the Order, upon successful update of this order, it deletes the custom object.

There is an Issue reported that the job is constantly failing and custom objects are growing in number. On investigating the production look the message below is being logged on each failure:

```
Processing of custom object 1xoskncjdw687769 failed for order 500000001 and has an associated replacement order 100000001. Exception details:  
com.demandware.core.quota.QuotaLimitExceededException: Limit for quota 'object.OrderPO.relation.notes' exceeded. Limit is 1000, actual is 1001. at  
com.demandware.core.quota.QuotaExceededException.throwLimitExceed(QuotaExceededException.java:21) at  
com.demandware.core.quota.QuotaImpl.handleHardLimitViolation(QuotaImpl.java:333) at
```

What are three solution The Architect can take to fix this issue without losing meaningful data?

Choose 3 answers

- A. Take the backup of the Order as XML and delete the Order to ensure on the next job run, the custom objects are getting processed.
- B. Engage B2C Commerce Support Team to soften the quota limit for "object.OrderPO.relation.notes"
- C. Take the backup of the custom object and delete the custom object to ensure on the next job run the custom objects are getting processed.
- D. Using BM site import/export, soften the `<quota id="object.orderPo.relation.notes">`  
`<custom-action>warn<custom-action>` `</quot>` to make sure that neither order notes are lost and custom object is processed.
- E. Take the backup of the Order as XML and delete the notes from Order to ensure on the next job run the custom objects are getting processed.

**Answer: B,D,E**

### NEW QUESTION # 33

An ecommerce site has dynamic shipping cost calculation. it allows the customers to see their potential shipping costs on the Product Detail Page before adding an item to the cart.

For this feature, shipping costs are calculated using the following logic:

\* Set the shipping method on the Basket

\* Add the item to the basket, calculate the basket total and get the shipping cost for this method

\* Remove the item from the Basket to restore the original state

\* The above process is repeated for each shipping method

During the testing it was discovered that the above code violates the `spi.basket.addResolveInSameResquest` quota.

What should the Architect do to resolve this issue and maintain the business requirement?

- A. Wrap the adding of product and shipping cost calculation in a transaction which is then rolled back to restore the original state
- B. Omit the calculation of shipping cost until the customer is ready to check out and has chosen the shipping method they want to
- C. Wrap each individual step of the process its own transaction Instead of using one transaction for all steps.
- D. Omit the removal of the Item and speed up the process for the customer by adding the product to the basket for them.

**Answer: A**

### NEW QUESTION # 34

Given the SFRA Controller below:

```

11 var server = require('server');
12 var cache = require('*/cartridge/scripts/middleware/cache');
13
14 server.get('Show', cache.applyDefaultCache, function (req, res, next) {
15     viewData = {name: 'my string'};
16     res.render('/pages/mypage', viewData);
17     next();
18 });
19
20 module.exports = server.exports();

```

Why would a JavaScript debugger, that is stopped at line 06, fail to show the viewdata variable in the inspection tool?

- A. viewdata is declared but not assigned.
- B. cache.applyDefaultCache is not a valid middleware.
- **C. viewdata is assigned but not declared.**
- D. viewdata is a B2C Script reserved name.

**Answer: C**

#### NEW QUESTION # 35

A developer is validating the pipeline cache and noticed that the PDP page is very low cached. The one parameter is showing the position on the product listing page upon checking the site and code.

What should the developer adjust in order to improve the page cache hit ratio, keeping in mind that the client is insisting on the parameter for their analytics?

- A. Rework the Implementation so it doesn't depend on that parameter.
- B. Rework the implementation so it reads the parameter on client-side, passes it to the analytics and exclude It from cache parameters.
- **C. Add the key to the cache exclude parameters.**
- D. Rework the Implementation so the parameter is not passed In the URL and is read from the URL hash.

**Answer: C**

#### NEW QUESTION # 36

A company has B2C Commerce and Marketing Cloud. The Marketing team wants to match up the purchasing data from B2C Commerce to the Marketing Cloud subscriber data.

Which two objects from B2C Commerce should a Solution Architect map to Marketing Cloud in order to meet the company's needs?

Choose 2 answers

- **A. Orders**
- B. Profile
- C. Contact
- D. Customer

**Answer: A**
